Systems of Partial Differential Equations and Lie Pseudogroups J. F. Pommaret, 1978 **Synthetic Geometry of Manifolds** Anders Kock, 2010 This elegant book is sure to become the standard introduction to synthetic differential geometry It deals with some classical spaces in differential geometry namely prolongation spaces or neighborhoods of the diagonal These spaces enable a natural description of some of the basic constructions in local differential geometry and in fact form an inviting gateway to differential geometry and also to some differential geometric notions that exist in algebraic geometry The presentation conveys the real strength of this approach to differential geometry Concepts are clarified proofs are streamlined and the focus on infinitesimal spaces motivates the discussion well Some of the specific differential geometric theories dealt with are connection theory notably affine connections geometric distributions differential forms jet bundles differentiable groupoids differential operators Riemannian metrics and harmonic maps Ideal for graduate students and researchers wishing to familiarize themselves with the field Selecta Donald Clayton Spencer, 1985 **Journal of Differential Geometry**, 1978 **Notices of the American Mathematical Society** American Mathematical Society, 1990

Journal of Mathematical Sciences, the University of Tokyo, 1999 Lie Groups Daniel Bump, 2013-10-01 This book is intended for a one year graduate course on Lie groups and Lie algebras The book goes beyond the representation theory of compact Lie groups which is the basis of many texts and provides a carefully chosen range of material to give the student the bigger picture The book is organized to allow different paths through the material depending on one's interests This second edition has substantial new material including improved discussions of underlying principles streamlining of some proofs and many results and topics that were not in the first edition For compact Lie groups the book covers the Peter Weyl theorem Lie algebra conjugacy of maximal tori the Weyl group roots and weights Weyl character formula the fundamental group and more The book continues with the study of complex analytic groups and general noncompact Lie groups covering the Bruhat decomposition Coxeter groups flag varieties symmetric spaces Satake diagrams embeddings of Lie groups and spin Other topics that are treated are symmetric function theory the representation theory of the symmetric group Frobenius Schur duality and $GL(n, \mathbb{C})/GL(m, \mathbb{C})$ duality with many applications including some in random matrix theory branching rules Toeplitz determinants combinatorics of tableaux Gelfand pairs Hecke algebras the philosophy of cusp forms and the cohomology of Grassmannians An appendix introduces the reader to the use of Sage mathematical software for Lie group computations

Scientist ,1942 *Systolic Geometry and Topology* Mikhail Gersh Katz,2007 The systole of a compact metric space X is a
metric invariant of X defined as the least length of a noncontractible loop in X When X is a graph the invariant is usually
referred to as the girth ever since the 1947 article by W Tutte The first nontrivial results for systoles of surfaces are the two
classical inequalities of C Loewner and P Pu relying on integral geometric identities in the case of the two dimensional torus
and real projective plane respectively Currently systolic geometry is a rapidly developing field which studies systolic
invariants in their relation to other geometric invariants of a manifold This book presents the systolic geometry of manifolds
and polyhedra starting with the two classical inequalities and then proceeding to recent results including a proof of M
Gromov's filling area conjecture in a hyperelliptic setting It then presents Gromov's inequalities and their generalisations as
well as asymptotic phenomena for systoles of surfaces of large genus revealing a link both to ergodic theory and to properties
of congruence subgroups of arithmetic groups The author includes results on the systolic manifestations of Massey products
as well as of the classical Lusternik Schnirelmann category Higher Homotopy Structures in Topology and Mathematical
Physics James D. Stasheff,John McCleary,1999 Since the work of Stasheff and Sugawara in the 1960s on recognition of loop
space structures on H spaces the notion of higher homotopies has grown to be a fundamental organizing principle in
homotopy theory differential graded homological algebra and even mathematical physics This book presents the proceedings
from a conference held on the occasion of Stasheff's 60th birthday at Vassar in June 1996 It offers a collection of very high
quality papers and includes some fundamental essays on topics that open new areas Books in Print ,1991 *Books in*
