## **Form Space Vision:**

Form, Space, and Vision Graham Collier, 1972      **Visions of the Real** Alexandru Calcatinge, 2011 The cultural landscape is what lies around us and has to be understood and learned to deal with The best way to do this is to start from the beginning in order to understand the contemporary iterations of the concept We will not reinvent the concept but we will try to create a new way to see it The operative concept of cultural landscape is part of a reality that is seen and visioned differently by each individual This means that the concept has an almost infinite number of meanings Thus this book presents some of the visions of the surrounding reality through the eyes of an architect      Spatial Vision Processes Daniel J. Jobson, 1988      John McGahern John Singleton, 2023-11-17 John McGahern 1934 2006 believed that fiction could act as a window on the world Such windows however frame our fields of vision alter and shape our perspectives Far from being static the artist's perspective must continually evolve This book provides a literary analysis of John McGahern's artistic and poetic vision his ways of looking examining the shifting focus of this vision how and why it develops what effects such developments have on the work's forms and how these forms evolve at what times and in response to what stimuli This volume demonstrates that such developments mirror an analogous social expansion during the latter half of the twentieth century and argues that McGahern's literary spaces relate to his efforts to realise a more accommodating form to envelop the structureless society While the number of critical studies on McGahern has increased markedly in recent years research still tends to fall into the well established camps of social realism or literary aestheticism This text aims to explore the common ground between the material context and social worlds of each work and the hermeneutics of a traditional literary investigation It traverses such divides through close readings of McGahern's work with attention to the topopoetical production of images of the house the home and the family unit The book ultimately shows how attention to McGahern's literary spaces provides a greater understanding of the aesthetic vision and form of each novel and allows us to understand those aspects relative to the social cultural and political undercurrents of the works individually and collectively      **Form, Space and Design** Mahmoud Tavassoli, 2019-07-18 This book studies the principles of urban spatial organization of historic cities It can be considered a guide to design presenting qualitative criteria to satisfy practical needs The subject is explored through interconnected chapters each addressing an important aspect of form space and design values knowledge and our present problems In this book the interpretation is artistic and socio cultural Discussion is not concentrated on singular urban space but on interrelated spaces and elements across the city and complexes Considering the comparative aspects of study the reader will notice that despite cultural differences there is a common understanding in artistic creativity and sensibility in the presented examples      **Spatial Vision** Russell L. DeValois, Karen K. DeValois, 1990-08-09 This volume presents an integrated view of how we perceive the spatial relations in our visual world covering anatomical physiological psychophysical and perceptual aspects The authors discuss the visual system primarily in terms of spatial frequency analysis

using a linear systems approach They review evidence supporting a local patch by patch spatial frequency filtering of visual information rather than the global Fourier analysis other researchers have proposed A separate chapter addresses the special issues surrounding color vision and a brief nonmathematical introduction to linear systems analysis is included for the uninitiated reader

**Visual Science and Engineering** D.H. Kelly,2018-10-03 This work examines a broad spectrum of the latest topics in visual science relating basic studies to applications and delineating points of intersection among the various disciplines that study the mechanisms of vision It discusses among other topics the Purkinje image eyetracker the principles of high definition television and the role of stabilized image technology in revealing how eye movements control both luminous and chromatic perceptions

**Objects in Air** Margareta Ingrid Christian,2021-06-07 Margareta Ingrid Christian unpacks the ways in which around 1900 art scholars critics and choreographers wrote about the artwork as an actual object in real time and space surrounded and fluently connected to the viewer through the very air we breathe Theorists such as Aby Warburg Alois Riegl Rainer Maria Rilke and the choreographer Rudolf Laban drew on the science of their time to examine air as the material space surrounding an artwork establishing its milieu atmosphere or environment Christian explores how the artwork s external space was seen to work as an aesthetic category in its own right beginning with Rainer Maria Rilke s observation that Rodin s sculpture exhales an atmosphere and that Cezanne s colors create a calm silken air that pervades the empty rooms where the paintings are exhibited Writers created an early theory of unbounded form that described what Christian calls an artwork s ecstasis or its ability to stray outside its limits and engender its own space Objects viewed in this perspective complicate the now fashionable discourse of empathy aesthetics the attention to self projecting subjects and the idea of the modernist self contained artwork For example Christian invites us to historicize the immersive spatial installations and environments that have arisen since the 1960s and to consider their origins in turn of the twentieth century aesthetics Throughout this beautifully written work Christian offers ways for us to rethink entrenched narratives of aesthetics and modernism and to revisit alternatives

**Place Identity, Participation and Planning** Cliff Hague,Paul Jenkins,2005 Can regional identities create a more sustainable alternative to the increasingly standardised environments in which we live Is bottom up rather than top down planning possible

**The Natural and the Normative** Gary Carl Hatfield,1990 Gary Hatfield examines theories of spatial perception from the seventeenth to the nineteenth century and provides a detailed analysis of the works of Kant and Helmholtz who adopted opposing stances on whether central questions about spatial perception were amenable to natural scientific treatment At stake were the proper understanding of the relationships among sensation perception and experience and the proper methodological framework for investigating the mental activities of judgment understanding and reason issues which remain at the core of philosophical psychology and cognitive science Hatfield presents these important issues as living philosophies of science that shape and are shaped by actual research programs creating a complex and fascinating picture of the entire nineteenth century battle between nativism and empiricism His examination of Helmholtz s work in physiological optics and epistemology is a tour de force Gary Hatfield is Associate Professor of Philosophy at the University of Pennsylvania
