**Structures** William Weaver,James M. Gere,2012-12-06 Matrix analysis of structures is a vital subject to every structural analyst whether working in aero astro civil or mechanical engineering It provides a comprehensive approach to the analysis of a wide variety of structural types and therefore offers a major advantage over traditional metho which often differ for each type of structure The matrix approach also provides an efficient means of describing various steps in the analysis and is easily programmed for digital computers Use of matrices is natural when performing calculations with a digital computer because matrices permit large groups of numbers to be manipulated in a simple and effective manner This book now in its third edition was written for both college students and engineers in industry It serves as a textbook for courses at either the senior or first year graduate level and it also provides a permanent reference for practicing engineers The book explains both the theory and the practical implementation of matrix methods of structural analysis Emphasis is placed on developing a physical understanding of the theory and the ability to use computer programs for performing structural calculations

**Synchronous Programming** Ali S. Janfada,2019-06-04 Algorithms are the essence of programming After their construction they have to be translated to the codes of a specific programming language There exists a maximum of ten basic algorithmic templates This textbook aims to provide the reader with a more convenient and efficient method to create a program by translating algorithms template by template with C and Java This is the slogan of the book You will be a professional programmer whenever you become a skilled algorithm designer This book attempts to gradually strengthen the readers ability to identify and analyze the mental commands which are issued and implemented in their brains for solving the problems in which mathematical computations are applied and try to design an algorithm based on their understanding and analyses It then seeks to encourage the readers to develop their skills in algorithm writing for computational problems and synchronously teach them to translate the algorithms into C and Java codes using the least necessary keywords
