**Scientific Data Mining and Knowledge Discovery** Mohamed Medhat Gaber, 2009-09-19 Mohamed Medhat Gaber It is not my aim to surprise or shock you but the simplest way I can summarise is to say that there are now in the world machines that think that learn and that create Moreover their ability to do these things is going to increase rapidly until in a visible future the range of problems they can handle will be coextensive with the range to which the human mind has been applied by Herbert A Simon 1916 2001 1 Overview This book suits both graduate students and researchers with a focus on discovering knowledge from scientific data The use of computational power for data analysis and knowledge discovery in scientific disciplines has found its roots with the revolution of high performance computing systems Computational science in physics chemistry and biology represents the first step towards automation of data analysis tasks The rationale behind the development of computational science in different areas was automating mathematical operations performed in those areas There was no attention paid to the scientific discovery process Automated Scientific Discovery ASD 1 3 represents the second natural step ASD attempted to automate the process of theory discovery supported by studies in philosophy of science and cognitive sciences Although early research articles have shown great successes the area has not evolved due to many reasons The most important reason was the lack of interaction between scientists and the automating systems

*Foundations and Novel Approaches in Data Mining* Tsau Young Lin, Setsuo Ohsuga, Churn-Jung Liao, Xiaohua Hu, 2005-11-03 Data mining has become a popular research topic in recent years for the treatment of the data rich and information poor syndrome Currently application oriented engineers are only concerned with their immediate problems which results in an ad hoc method of problem solving

Researchers on the other hand lack an understanding of the practical issues of data mining for real world problems and often concentrate on issues that are of no significance to the practitioners In this volume we hope to remedy problems by 1 presenting a theoretical foundation of data mining and 2 providing important new directions for data mining research A set of well respected data mining theoreticians were invited to present their views on the fundamental science of data mining We have also called on researchers with practical data mining experiences to present new important data mining topics
