Foundations Of Logicolinguistics A Unified Theory Of Information Language And Logic:

Foundations of Logico-Linguistics W.S. Cooper,2012-12-06 In 1962 a mimeographed sheet of paper fell into my possession It had been prepared by Ernest Adams of the Philosophy Department at Berkeley as a handout for a colloquim Headed SOME FALLACIES OF FORMAL LOGIC it simply listed eleven little pieces of reasoning all in ordinary English and all absurd I still have the sheet and quote a couple of the arguments here to give the idea If you throw switch S and switch T the motor will start There fore either if you throw switch S the motor will start or if you throw switch T the motor will start It is not the case that if John passes history he will graduate Therefore John will pass history The disconcerting thing about these inferences is of course that under the customary truth functional interpretation of and or not and if then they are supposed to be valid What if anything is wrong At first I was not disturbed by the examples Having at that time consider able personal commitment to rationality in general and formal logic in par ticular I felt it my duty and found myself easily able or so I thought to explain away most of them But on reflection I had to admit that my expla nations had an ad hoc character varying suspiciously from example to example   **Foundations of logico-linguistics** William S. Cooper,1978   The Theory of Info-Statics: Conceptual Foundations of Information and Knowledge Kofi K. Dompere,2017-07-06 This book discusses the development of a theory of info statics as a sub theory of the general theory of information It describes the factors required to establish a definition of the concept of information that fixes the applicable boundaries of the phenomenon of information its linguistic structure and scientific applications The book establishes the definitional foundations of information and how the concepts of uncertainty data fact evidence and evidential things are sequential derivatives of information as the primary category which is a property of matter and energy The sub definitions are extended to include the concepts of possibility probability expectation anticipation surprise discounting forecasting prediction and the nature of past present future information structures It shows that the factors required to define the concept of information are those that allow differences and similarities to be established among universal objects over the ontological and epistemological spaces in terms of varieties and identities These factors are characteristic and signal dispositions on the basis of which general definitional foundations are developed to construct the general information definition GID The book then demonstrates that this definition is applicable to all types of information over the ontological and epistemological spaces It also defines the concepts of uncertainty data fact evidence and knowledge based on the GID Lastly it uses set theoretic analytics to enhance the definitional foundations and shows the value of the theory of info statics to establish varieties and categorial varieties at every point of time and thus initializes the construct of the theory of info dynamics   **The Theory of Info-Dynamics: Rational Foundations of Information-Knowledge Dynamics** Kofi K. Dompere,2017-12-06 This book focuses on the development of a theory of info dynamics to support the theory of info statics in the general theory of information It establishes the rational foundations of information dynamics and how these foundations relate to the general socio natural

dynamics from the primary to the derived categories in the universal existence and from the potential to the actual in the ontological space It also shows how these foundations relate to the general socio natural dynamics from the potential to the possible to give rise to the possibility space with possibilistic thinking from the possible to the probable to give rise to possibility space with probabilistic thinking and from the probable to the actual to give rise to the space of knowledge with paradigms of thought in the epistemological space The theory is developed to explain the general dynamics through various transformations in quality quantity space in relation to the nature of information flows at each variety transformation The theory explains the past present future connectivity of the evolving information structure in a manner that illuminates the transformation problem and its solution in the never ending information production within matter energy space under socio natural technologies to connect the theory of info statics which in turn presents explanations to the transformation problem and its solution The theoretical framework is developed with analytical tools based on the principle of opposites systems of actual potential polarities negative positive dualities under different time structures with the use of category theory fuzzy paradigm of thought and game theory in the fuzzy stochastic cost benefit space The rational foundations are enhanced with categorial analytics The value of the theory of info dynamics is demonstrated in the explanatory and prescriptive structures of the transformations of varieties and categorial varieties at each point of time and over time from parent offspring sequences It constitutes a general explanation of dynamics of information knowledge production through info processes and info processors induced by a socio natural infinite set of technologies in the construction destruction space **Language and Logic** Johan van der Auwera,1985-01-01 In this volume Van der Auwera attempts to clarify the idea that language reflects both mind and reality and to elucidate the reflection idea by turning it into the cornerstone of a linguistic theory of meaning A General Theory of Entropy Kofi Kissi Dompere,2019-08-02 This book presents an epistemic framework for dealing with information knowledge and certainty uncertainty problems within the space of quality quantity dualities It bridges between theoretical concepts of entropy and entropy measurements proposing the concept and measurement of fuzzy stochastic entropy that is applicable to all areas of knowing under human cognitive limitations over the epistemological space The book builds on two previous monographs by the same author concerning theories of info statics and info dynamics to deal with identification and transformation problems respectively The theoretical framework is developed by using the toolboxes such as those of the principle of opposites systems of actual potential polarities and negative positive dualities under different cost benefit time structures The category theory and the fuzzy paradigm of thought under methodological constructionism reductionism duality are used in the fuzzy stochastic and cost benefit spaces to point to directions of global application in knowing knowledge and decision choice actions Thus the book is concerned with a general theory of entropy showing how the fuzzy paradigm of thought is developed to deal with the problems of qualitative quantitative uncertainties over the fuzzy stochastic space which will be applicable to conditions of soft hard data fact evidence and knowledge over the

spaces of problem solution dualities decision choice actions in sciences non sciences engineering and planning sciences to abstract acceptable information knowledge elements *Logical Structure and Linguistic Structure* C-T James Huang,Robert May,2012-12-06 In comparative syntax a general approach has been pursued over the past decade predicated on the notion that Universal Grammar allows of open parameters and that part of the job of linguistic theory is to specify what values these parameters may have and how they may be set given primary linguistic data to determine the grammars of particu lar languages The papers presented in this volume are also concerned with language variation understood in this way Their goals however do not strictly fall under the rubric of comparative syntax but form part of what is more properly thought of as a comparative semantics Semantics in its broadest sense is concerned with how linguistic structures are associated with their truth conditions A comparative semantics therefore is concerned with whether this association can vary from language to language and if so what is the cause of this variation Taking comparative semantics in this way places certain inherent limitations on the search for the sources of variability This is because the semantic notion of truth is universal and does not vary from language to language Sentences either do or do not accurately characterize what they purport to describe The source of semantic variability therefore must be somehow located in the way a language is structured **Bibliography of Semiotics, 1975 1985** ,1986-01-01 This bibliography of semiotic studies covering the years 1975 1985 impressively reveals the world wide intensification in the field During this decade national semiotic societies have been founded allover the world a great number of international national and local semiotic conferences have taken place the number of periodicals and book series devoted to semiotics has increased as has the number of books and dissertations in the field This bibliography is the result of a dedicated effort to approach complete coverage **The Theory of Categorial Conversion** Dompere, Kofi Kissi,2017-09-17 The Theory of Categorial Conversion is advanced by Professor Kofi Kissi Dompere as mathematical philosophical and game theoretic foundations to solve the problem of socio natural transformation as governed by some internal process in relation to Marx Schumpeter and Nkrumah Dompere s methodology is based on the Africentric principles of opposites made up of actual potential polarity negative positive duality with relational continuum and unity under cost benefit rationality and Asantrofi Anoma principle supported by fuzzy paradigm of thought Socio natural transformations are seen in terms of game theories in a fuzzy stochastic space admitting of defective deceptive information structures in quality quantity space within the subjective objective duality The main premise of the monograph is that there exists a set of necessary and sufficient conditions for internal self transformation The necessary conditions are made up of categorial moments and categorial transfer functions forming the domain of control instrumentation in creating the sufficient conditions for categorial conversion processes Dompere presents an important methodological framework for the study and construction of the theories of socioeconomic development and political change as well as info dynamics connecting knowledge sciences innovation and engineering to the space of knowing under qualitative quantitative transformational

dynamics with defective deceptive information structures in the games for power and dominance by duals and poles in conflicts The necessary conditions of socio natural transformation are internally derived based on the relational structure of matter energy information activities within the dynamics of qualitative dispositions of dualities of actual potential polarities The theory consists of category formation showing ontological epistemological categories and categorial dynamics shows elemental conversions of categorial varieties in a continuum The logical tools and the paradigm of thought for the theoretical development of Nkrumah s framework involve self excitement self correction and self control systems induced by internal contradictions The set of necessary conditions constitutes the natural necessity that constrains cognitive freedom in socio natural transformations Had this conceptual system been familiar to economists and social scientists the construct of the theories of socioeconomic development and transformations would have been increasingly successful **The Theory of the Knowledge Square: The Fuzzy Rational Foundations of the Knowledge-Production Systems** Kofi Kissi Dompere,2012-08-28 The monograph is about a meta theory of knowledge production process and the logical pathway that connects the epistemic possibility to the epistemic reality It examines the general conditions of paradigms for information processing and isolates the classical and fuzzy paradigms for comparative analysis The sets of conditions that give rise to them are defined stated and analyzed to abstract the corresponding sets of laws of thought The fuzzy paradigm with its corresponding logic and mathematics is related to inexact symbolism for the defective information structure where the results of the knowledge production must satisfy the epistemic conditionality composed of fuzzy conditionality and fuzzy stochastic conditionality under the principle of logical duality with continuum The classical paradigm with its corresponding logic and mathematics is related to exact symbolism for exact information structure where the vagueness component of the defectiveness is assumed away and where the results of the knowledge production must satisfy no epistemic conditionality or at the maximum only the stochastic conditionality under the principle of logical dualism with excluded middle It is argued that the epistemic path that links ontological space to the epistemological space is information The ontological space is taken as the primary category of reality while the epistemological space is shone to be a derivative Such information is universally defective and together with assumptions imposed guides the development of paradigms with their laws of thought logic of reasoning mathematics and computational techniques The relational structure is seen in terms of logical trinity with a given example as matter information energy transformational trinity which is supported by the time trinity of past present future relationality The book is written for professionals researchers and students working in philosophy of science decision choice theories economies sciences computer science engineering cognitive psychology and researchers working on or interested in fuzzy paradigm fuzzy logic fuzzy decisions and phenomena of vagueness and ambiguities fuzzy mathematics fuzzy stochastic processes and theory of knowledge It is further aimed at research institutions and libraries The subject matter belongs to extensive research and development taking place on fuzzy phenomena and the debate between the fuzzy paradigm and the

classical paradigm relative to informatics synergetic science and complexity theory The book will have a global appeal and across disciplines Its strength besides the contents is the special effort that is undertaken to make it relevant and accessible to different areas of sciences and knowledge production **Structures for Semantics** Fred Landman,2012-12-06 Formalization plays an important role in semantics Doing semantics and following the literature requires considerable technical sophistica tion and acquaintance with quite advanced mathematical techniques and structures But semantics isn t mathematics These techniques and structures are tools that help us build semantic theories Our real aim is to understand semantic phenomena and we need the technique to make our understanding of these phenomena precise The problems in semantics are most often too hard and slippery to completely trust our informal understanding of them This should not be taken as an attack on informal reasoning in semantics On the contrary in my view very often the essential insight in a diagnosis of what is going on in a certain semantic phenomenon takes place at the informal level It is very easy however to be misled into thinking that a certain informal insight provides a satisfying analysis of a certain problem it will often turn out that there is a fundamental unclarity about what the informal insight actually is Formalization helps to sharpen those insights and put them to the test Reference to Abstract Objects in Discourse Nicholas Asher,2012-12-06 Reference to Abstract Objects in Discourse presents a novel framework and analysis of the ways we refer to abstract objects in natural language discourse The book begins with a typology of abstract objects and related entities like eventualities After an introduction to bottom up compositional discourse representation theory DRT and to previous work on abstract objects in DRT notably work on the semantics of the attitudes the book turns to a semantic analysis of eventuality and abstract object denoting nominals in English The book then substantially revises and extends the dynamic semantic framework of DRT to develop an analysis of anaphoric reference to abstract objects and eventualities that exploits discourse structure and the discourse relations that obtain between elements of the structure A dynamic semantically based theory of discourse structure SDRT is proposed along with many illustrative examples Two further chapters then provide the analysis of anaphoric reference to propositions VP ellipsis The abstract entity anaphoric antecedents are elements of the discourse structures that SDRT develops The final chapter discusses some logical and philosophical difficulties for a semantic analysis of reference to abstract objects For semanticists philosophers of language computer scientists interested in natural language applications and discourse philosophical logicians graduate students in linguistics philosophy cognitive science and artificial intelligence The Parameter of Aspect C.S. Smith,2013-03-09 During the period I have been working on this project I have received institutional support of several kinds for which I am most grateful I thank the Institute for Advanced Study at Stanford University and the Spencer Foundation for a stimulating environment in which the basic idea of this book was developed The Max Planck Institute for Psycholinguistics at Nijmegen enabled me to spend several months working on the the manuscript ANational Science Foundation grant to develop Discourse Representation theory and a grant from The University Research

Institute of the University of Texas allowed me time to pursue this project I also thank the Center for Cognitive Science at the University of Texas for research support I thank Helen Aristar Dry for reading early drafts of the manuscript sten Dahl for penetrating remarks on a preliminary version and my collaborator Gilbert Rappaport for relentIess comments and questions throughout The individuals with whom I have worked on particular languages are mentioned in the relevant chapters I owe a particular debt of gratitude to the members of my graduate seminar on aspect in the spring of 1990 they raised many questions of importance which made a real difference to the working out of the theory I have benefitted from presenting parts of this material publicly including cOlloquia at the University of California at Berkeley the University of California at San Diego the University of Pennsylvania Rice University the University of Texas and the University of Tel Aviv **Modality and Meaning** W.G. Lycan,2012-12-06 Part I of this book presents a theory of modal metaphysics in the possible worlds tradition Worlds themselves are understood as structured sets of properties this Ersatzist view is defended against its most vigorous competitors Meinongianism and David Lewis theory of existent concrete worlds Related issues of essentialism and linguistic reference are explored Part II takes up the question of lexical meaning in the context of possible world semantics There are skeptical analyses of analyticity and the notion of a logical constant and an infinite polysemy thesis is defended The book will be of particular interest to metaphysicians possible world semanticists philosophers of language and linguists concerned with lexical semantics **Control and Grammar** R.K. Larson,S. Iatridou,Utpal Lahiri,J. Higginbotham,2013-03-09 The articles in this volume grew from papers presented at the workshop on control held at the Massachusetts Institute of Technology March 1989 The work of the various authors comes at a moment in linguistic theory that is notable for two developments First there has been increasing involvement of syntactic theory in semantics and of semantic theory in syntax with the result that the sorting of facts into syntactic and semantic has become a more complex and theory laden affair Second there has been an enormous growth both in the breadth and depth of studies in languages other than English Both of these develop ments have left their mark on the authors directly and indirectly They have also been responsible for the shifts that have given the key terminology its present range of application In this introduction we discuss the background to the issues that were particularly prominent both at the workshop and in the authors final drafts We also com ment on the spirit of inquiry that they represent Our goal is to provide some orientation to the specific contents of the essays and to supply material for reflection on a set of problems that will doubtless develop and deepen as rapidly in the foreseeable future as they have in the recent past **Aspect in English** K. Kabakciev,2013-03-09 Based on an earlier edition published in 1992 in Bulgarian this book offers a specific approach to one of the most controversial problems in linguistics According to it aspect is the result of a subtle and complex interplay between the referents of verbs and nouns in the sentence Special attention is paid to the role nouns and noun phrases play in the explication of aspect in English and similar languages The grammatical marking of aspect is shown to be a compensatory phenomenon imposed by language

structure Comparisons made using Slavic mainly Bulgarian data reveal that compositional aspect is a mirror image of verbal aspect When explicated compositionally aspect is also determined by pragmatic factors Ultimately it is part of man s cognitive potential   Introduction to Montague Semantics D. R. Dowty,R. Wall,S. Peters,2012-12-06 In this book we hope to acquaint the reader with the fundamentals of truth conditional model theoretic semantics and in particular with a version of this developed by Richard Montague in a series of papers published during the 1960 s and early 1970 s In many ways the paper The Proper Treatment of Quantification in Ordinary English commonly abbreviated PTQ represents the culmination of Montague s efforts to apply the techniques developed within mathematical logic to the semantics of natural languages and indeed it is the system outlined there that people generally have in mind when they refer to Montague Grammar We prefer the term Montague Semantics inasmuch as a grammar as conceived of in current linguistics would contain at least a phonological component a morphological component and other subsystems which are either lacking entirely or present only in a very rudi mentary state in the PTQ system Montague s work has attracted increasing attention in recent years among linguists and philosophers since it offers the hope that semantics can be characterized with the same formal rigor and explicitness that transformational approaches have brought to syntax Whether this hope can be fully realized remains to be seen but it is clear nonetheless that Montague semantics has already established itself as a productive para digm leading to new areas of inquiry and suggesting new ways of conceiving of theories of natural language Unfortunately Montague s papers are tersely written and very difficult to follow unless one has a considerable background in logical semantics

Theory of Philosophical Consciencism Dompere, Kofi Kissi,2017-09-24 In the Theory of Philosophical Consciencism Professor Dompere establishes how Nkrumah used the theory of categorical conversion housing the necessary conditions of transformation to design strategies for creating the sufficient conditions for socio political transformations The theory of Philosophical Consciencism is about the institutionally destruction creation process for socio political transformation The theory shows the scientific contributions of Nkrumah s thinking to the solution of the transformation problem in science and its application to social systemicity where Nkrumah s analytical weapons were drawn from African conceptual system The theory is developed as logico mathematical foundations that guide the internal management of the command control decision choice systems for creative destruction of socio political varieties in transformations through the development of qualitative mathematics making possible the construct of qualitative equations of motion for connecting varieties in qualitative transfers The qualitative equations of motion through the Philosophical Consciencism constitute the sufficient conditions for transformations The theory links rationality intentionality experiential information structure defective deceptive information structures in the control dynamic games of power and dominance by the duals and poles under the principle of opposites with relational continua and unity relative to decision choice systems that induce negation negation transformations where paths are established by the history of success failure outcomes in the socially control dynamic zero sum games between the

duals in any duality and between the poles of any actual potential polarity The main premise of the monograph is that there exists a set of sufficient conditions in support of the necessary conditions for internal transformation of socio natural varieties The theory is useful in understanding developmental processes and multi polar power zero sum games for global dominance The necessary conditions constitute the natural necessity that constrains cognitive freedom The sufficient conditions constitute cognitive freedom that must overcome the necessity in socio natural systems dynamics Had this conceptual system been familiar to African leaders the African transformation from colonialism to complete emancipation rather than neocolonialism would have been increasingly successful This holds for those seeking triumph over injustices oppression imperialism and social change in all systems **Fuzziness and Foundations of Exact and Inexact Sciences** Kofi Kissi Dompere,2012-08-23 The monograph is an examination of the fuzzy rational foundations of the structure of exact and inexact sciences over the epistemological space which is distinguished from the ontological space It is thus concerned with the demarcation problem It examines exact science and its critique of inexact science The role of fuzzy rationality in these examinations is presented The driving force of the discussions is the nature of the information that connects the cognitive relational structure of the epistemological space to the ontological space for knowing The knowing action is undertaken by decision choice agents who must process information to derive exact inexact or true false conclusions The information processing is done with a paradigm and laws of thought that constitute the input output machine The nature of the paradigm selected depends on the nature of the information structure that is taken as input of the thought processing Generally the information structure received from the ontological space is defective from the simple principles of acquaintances and the limitations of cognitive agents operating in the epistemological space How then do we arrive and claim exactness in our knowledge production system The general conclusion of this book is that the conditions of the fuzzy paradigm with its laws of thought and mathematics present a methodological unity of exact and inexact sciences where every zone of thought has fuzzy covering **Organization Paremiology** Kofi Kissi Dompere,2017-02-17 In the Theory of Philosophical Consciencism Professor Dompere establishes how Nkrumah used the theory of categorial conversion housing the necessary conditions of transformation to design strategies for creating the sufficient conditions for socio political transformations The theory of Philosophical Consciencism is about the institutionally destruction creation process for socio political transformation The theory shows the scientific contributions of Nkrumah s thinking to the solution of the transformation problem in science and its application to social systemicity where Nkrumah s analytical weapons were drawn from African conceptual system The theory is developed as logico mathematical foundations that guide the internal management of the command control decision choice systems for creative destruction of socio political varieties in transformations through the development of qualitative mathematics making possible the construct of qualitative equations of motion for connecting varieties in qualitative transfers The qualitative equations of motion through the Philosophical Consciencism constitute the sufficient conditions for
