Hog Manure Management The Environment And Human Health:

Hog Manure Management, the Environment and Human Health Tiffany T.Y. Guan, Richard A. Holley, 2011-06-28 This volume provides a current look at how development of intensive live stock production particularly hogs has affected human health with respect to zoonotic diseases primarily transmitted by food but also by water air and occupational activity While information presented focuses on the development of increasing livestock production in Canada examples are given and comparisons are made with other countries Denmark Taiwan the Netherlands and the United States where the levels of livestock production are much more intense and where the industry is more mature Canada is also searching for solutions to enable handling the growing volume of its livestock waste properly Lessons learned from the experience of those who have gone before are invaluable and are drawn together in this volume to serve as useful guidance for others in plotting the courses of action possible to avoid serious environmental setbacks and negative human health effects through foodborne illness A significant portion of the text is devoted to a discussion of enteric illness in humans caused by zoonotic pathogens The second chapter deals with survival of pathogens which cause foodborne illness in manure environments An evaluation of the human health hazard likely to occur from the use of manure as fertilizer is important because of the recent trend toward an increase in foodborne illness from the consumption of minimally processed fruits and vegetables that may have been fertilized with animal derived organic materials

Meat Makes People Powerful Wilson J. Warren, 2018-02-15 From large scale cattle farming to water pollution meat more than any other food has had an enormous impact on our environment Historically Americans have been among the most avid meat eaters in the world but long before that meat was not even considered a key ingredient in most civilizations diets Labor historian Wilson Warren who has studied the meat industry for more than a decade provides this global history of meat to help us understand how it entered the daily diet and at what costs and benefits to society Spanning from the nineteenth century to current and future trends Warren walks us through the economic theory of food the discovery of protein the Japanese eugenics debate around meat and the environmental impact of livestock among other topics Through his comprehensive multifaceted research he provides readers with the political economic social and cultural factors behind meat consumption over the last two centuries With a special focus on East Asia *Meat Makes People Powerful* reveals how national governments regulated and oversaw meat production helping transform virtually vegetarian cultures into major meat consumers at record speed As more and more Americans pay attention to the sources of the meat they consume Warren's compelling study will help them not only better understand the industry but also make more informed personal choices Providing an international perspective that will appeal to scholars and nutritionists alike this timely examination will forever change the way you see the food on your plate

Sustainable animal production A. Aland,F. Madec,2023-09-04 An understanding of sustainability in animal production is becoming increasingly necessary since the global demand for food is expected to dramatically increase in the coming decades In this context raising animals for the production of food will become increasingly challenging Farm animals should not adversely compete with humans for their own sustenance and food of animal origin should be safe and affordable The production of healthy animals will therefore be a prerequisite Such animals will efficiently convert their feed into food that can be certified as nutritive and safe In addition there is growing evidence that there should be a focus on animal welfare and environmental pollution related to animal farming must be minimized Indeed the equation to resolve the constraints on animal production is complex and multifactorial It is inarguable that the environment and the feed that is offered to animals are key elements of sustainability in livestock and poultry production This book addresses the major issues related to animal health and welfare maintenance in relation to their environment as well as housing emissions and waste management Experiments reviews and expert opinions and scenarios for the future are presented Each of the chapters has been written by scientists with international reputations The language used and the examples and the illustrations provided make it easy to read The book is of major and current interest to teachers and students in animal and veterinary sciences and to professionals veterinarians farm managers agricultural advisers worldwide
