## **Holes And Other Superficialities:**

Holes and Other Superficialities Roberto Casati, Achille C. Varzi, 1994-01-01 This fascinating investigation on the borderlines of metaphysics everyday geometry and the theory of perception seeks to answer two basic questions Do holes really exist And if so what are they Holes are among entities that down to earth philosophers would like to expel from their ontological inventory Casati and Varzi argue in favor of their existence and explore the consequences of this unorthodox approach odd as these might appear They examine the ontology of holes their geometry their part whole relations their identity their causal role and the ways we perceive them Three basic kinds of holes are distinguished blind hollows perforating tunnels and internal cavities Treating these uniformly as immaterial bodies Casati and Varzi develop a morphology of holes focusing on how a hole can be filled They then look at the main properties of the resulting conceptual framework Holes they observe are parasitic upon the surface of their hosts holes can move fuse into one another split they can be born develop and die Finally the authors examine how some morphological features of holes are represented in perception including the conditions whereby we have the impression that we see feel or even hear a hole Roberto Casati is Assistant in the Department of Philosophy at the University of Neuchatel in Switzerland Achille C Varzi is with the Istituto per la Ricerca Scientifica e Tecnologica in Trento Italy

*The Tiny and the Fragmented* S. Rebecca Martin, Stephanie M. Langin-Hooper, 2018-10-16 Miniature and fragmentary objects are both eye catching and yet easily dismissed Tiny scale entices users with visions of Lilliputian worlds The ambiguity of fragments intrigues us offering tactile reminders of reality's transience Yet the standard scholarly approach to such objects has been to see them as secondary incomplete things whose principal purpose was to refer to a complete and often life size whole The Tiny and the Fragmented offers a series of fresh perspectives on the familiar concepts of the tiny and the fragmented Written by a prestigious group of internationally acclaimed scholars the volume presents a remarkable diversity of case studies that range from Neolithic Europe to pre Colombian Honduras to the classical Mediterranean and ancient Near East Each scholar takes a different approach to issues of miniaturization and fragmentation but is united in considering the little and broken things of the past as objects in their own right Whether a life size or whole thing is made in a scaled down form deliberately broken as part of its use or only considered successful in the eyes of ancient users if it shows some signs of wear it challenges our expectations of representation and wholeness of what it means for a work of art to be finished and affective Overall The Tiny and the Fragmented demands a reconsideration of the social and contextual nature of miniaturization fragmentation and incompleteness making the case that it was because of rather than in spite of their small or partial state that these objects were valued parts of the personal and social worlds they inhabited

**Human Perception** Marco Bertamini, Michael Kubovy, 2018-05-08 It takes little or no effort for us to gather information by means of our senses but it would be a mistake to take this as a sign that perception is simple It was in the 20th century and after the establishment of psychology as a

scientific discipline that the study of perception flourished This important volume gathers together a selection of articles and essays which represent some of the most interesting discoveries and theories It gives a flavour of the many different approaches and ideas taken by cognitive psychologists in this fascinating area Topics covered include attention brain systems object interpolation and completion object recognition and classification different types of objects and information processing and models

*Toward a Directionalist Theory of Space* H. Scott Hestevold, 2020-07-02 In *Toward a Directionalist Theory of Space* On Going Nowhere H Scott Hestevold formulates a new relationalist theory of space by appealing to the view that the universe is directioned in the sense that there exist directional relations a class of spatial relations that Leibniz overlooked Extending the directionalist relationalist theory of space to the problem of when it is that discrete objects compose a whole Hestevold revisits his answer to the Special Composition Question He also uses the directionalist relationalist theory to formulate reductivist theories of boundaries and holes theories that may allow one to resist the view that boundaries and holes are ontologically parasitic entities Finally he explores directionalism relationalism vis vis spacetime After noting findings of modern physics that favor substantivalist spacetime and then developing metaphysical concerns that favor instead directionalist relationalist spacetime Hestevold notes the ontological benefit of endorsing spatiotemporal directional relations even if spacetime substantivalism is the winning theory

Perceptual Ephemera Thomas Crowther, Clare Mac Cumhaill, 2018 As well as having perceptual experience of material objects we also experience such things as rainbows and surfaces shadows and absences A team of philosophers explore the unusual interest of our experience of ephemeral aspects of the world This is the first collective philosophical study of perceptual ephemera

**Carving Nature at Its Joints** Joseph Keim Campbell, Michael O'Rourke, Matthew H. Slater, 2011 Reflections on the metaphysics and epistemology of classification from a distinguished group of philosophers Contemporary discussions of the success of science often invoke an ancient metaphor from Plato's *Phaedrus* successful theories should carve nature at its joints But is nature really jointed Are there natural kinds of things around which our theories cut The essays in this volume offer reflections by a distinguished group of philosophers on a series of intertwined issues in the metaphysics and epistemology of classification The contributors consider such topics as the relevance of natural kinds in inductive inference the role of natural kinds in natural laws the nature of fundamental properties the naturalness of boundaries the metaphysics and epistemology of biological kinds and the relevance of biological kinds to certain questions in ethics *Carving Nature at Its Joints* offers both breadth and thematic unity providing a sampling of state of the art work in contemporary analytic philosophy that will be of interest to a wide audience of scholars and students concerned with classification

**The Fragmentation of Being** Kris McDaniel, 2017 The *Fragmentation of Being* offers answers to some of the most fundamental questions in ontology There are many kinds of beings but are there also many kinds of being The world contains a variety of objects each of which let us provisionally assume exists but do some objects exist in different ways Do some objects enjoy more being or existence than other objects

Are there different ways in which one object might enjoy more being than another Most contemporary metaphysicians would answer no to each of these questions So widespread is this consensus that the questions this book addressed are rarely even raised let alone explicitly answered But Kris McDaniel carefully examines a wide range of reasons for answering each of these questions with a yes In doing so he connects these questions with many important metaphysical topics including substance and accident time and persistence the nature of ontological categories possibility and necessity presence and absence persons and value ground and consequence and essence and accident In addition to discussing contemporary problems and theories McDaniel also discusses the ontological views of many important figures in the history of philosophy including Aquinas Aristotle Descartes Heidegger Husserl Kant Leibniz Meinong and many more *The Oxford Handbook of Philosophy of Perception* Mohan Matthen, 2015-07-02 The Oxford Handbook of Philosophy of Perception is a survey by leading philosophical thinkers of contemporary issues and new thinking in philosophy of perception It includes sections on the history of the subject introductions to contemporary issues in the epistemology ontology and aesthetics of perception treatments of the individual sense modalities and of the things we perceive by means of them and a consideration of how perceptual information is integrated and consolidated New analytic tools and applications to other areas of philosophy are discussed in depth Each of the forty five entries is written by a leading expert some collaborating with younger figures each seeks to introduce the reader to a broad range of issues All contain new ideas on the topics covered together they demonstrate the vigour and innovative zeal of a young field The book is accessible to anybody who has an intellectual interest in issues concerning perception

**Philosophical Perspectives on Ruins, Monuments, and Memorials** Jeanette Bicknell, Jennifer Judkins, Carolyn Korsmeyer, 2019-07-15 This collection of newly published essays examines our relationship to physical objects that invoke commemorate and honor the past The recent destruction of cultural heritage in war and controversies over Civil War monuments in the US have foregrounded the importance of artifacts that embody history The book invites us to ask How do memorials convey their meanings What is our responsibility for the preservation or reconstruction of historically significant structures How should we respond when the public display of a monument divides a community This anthology includes coverage of the destruction of Palmyra and the Bamiyan Buddhas the loss of cultural heritage through war and natural disasters the explosive controversies surrounding Confederate era monuments and the decay of industry in the U S Rust Belt The authors consider issues of preservation and reconstruction the nature of ruins the aesthetic and ethical values of memorials and the relationship of cultural memory to material artifacts that remain from the past Written by a leading group of philosophers art historians and archeologists the 23 chapters cover monuments and memorials from Dubai to Detroit from the instant destruction of Hiroshima to the gradual sinking of Venice

**Magic Circles** Devin McKinney, 2003 No one expressed the heart and soul of the Sixties as powerfully as the Beatles did through the words images and rhythms of their music In *Magic Circles* Devin McKinney uncovers the secret history of a generation and a

pivotal moment in twentieth century culture He reveals how the Beatles enacted the dream life of their time and shows how they embodied a kaleidoscope of desire and anguish for all who listened hippies or reactionaries teenage fans or harried parents Bob Dylan or Charles Manson The reader who dares to re enter the vortex that was the Sixties will appreciate perhaps for the first time much of what lay beneath the social trauma of the day Delving into concerts and interviews films and music outtakes and bootlegs Devin McKinney brings to bear the insights of history aesthetics sociology psychology and mythology to account for the depth and resonance of the Beatles impact His book is also a uniquely multifaceted appreciation of the group s artistic achievement exploring their music as both timeless expression and visceral response to their historical moment Starting in the cellars of Liverpool and Hamburg and continuing through the triumph of Beatlemania the groundbreaking studio albums and the last brutal sorrowful thrust of the White Album Magic Circles captures both the dream and the reality of four extraordinary musicians and their substance as artists At once an entrancing narrative and an analytical montage the book follows the drama comedy mystery irony and curious off ramps of investigation and inquiry that contributed to one of the most amazing odysseys in pop culture      *Metaphysics: The Key Concepts* Nikk Effingham, Helen Beebe, Philip Goff, 2010-11-30 Informative accessible and fun to read this is an excellent reference guide for undergraduates and anyone wanting an introduction to the fundamental issues of metaphysics I know of no other resource like it Meghan Griffith Davidson College USA Marvellous This book provides the very best place to start for students wanting to take the first step into understanding metaphysics Undergraduates would do well to buy it and consult it regularly The quality and clarity of the material are consistently high Chris Daly University of Manchester UK Ever wondered about Gunk Brains in a Vat or Frankfurt s Nefarious Neurosurgeon With complete explanations of these terms and more *Metaphysics The Key Concepts* is an accessible and engaging introduction to the most widely studied and challenging concepts in metaphysics The authors clearly and lucidly define and discuss key terms and concepts under the themes of time particulars universals realism antirealism free will personal identity causation and laws Arranged in an easy to use A Z format each concept is explored and illustrated with engaging and memorable examples and accompanied by an up to date guide to further reading Fully cross referenced throughout this remarkable reference guide is essential reading for students of philosophy and all those interested in the nature of reality      *Medinfo* Marius Fieschi, Enrico Coiera, Yu-Chan Jack Li, 2004 A fundamental challenge for medical informatics is to develop and apply better ways of understanding how information technologies and methods can help support the best care for every patient every day given available medical knowledge and resources In order to provide the most effective healthcare possible the activities of teams of health professionals have to be coordinated through well designed processes centered on the needs of patients For information systems to be accepted and used in such an environment they must balance standardization based on shared medical knowledge with the flexibility required for customization to the individual patient Developing innovative approaches to design and build evidence based careflow

management systems is essential for providing the knowledge management infrastructure of health care organizations that seeks to increase performance in delivering high quality care services by efficiently exploiting available resources. Parallel challenges arise in the organization of research at the biological and clinical levels where the focus on systematically organizing and supporting processes of scientific inquiry by novel informatics methods and databases are in their very early stages. These Proceedings of Medinfo 2004 demonstrate the base of knowledge medical informatics professionals will collectively draw upon in the years ahead to meet these challenges and realize opportunities.

**Spatial Information Theory** Thora Tenbrink, John Stell, Anthony Galton, Zena Wood, 2013-08-20 This book constitutes the proceedings of the 11th International Conference on Spatial Information Theory COSIT 2013 held in Scarborough UK in September 2013. The 28 papers presented in this book were carefully reviewed and selected from 62 full paper submissions. The following topics are addressed: spatial change, wayfinding and assistance, representing spatial data, handling language data, spatial language and computation, spatial ontology, spatial reasoning and representation.

**Human-Computer Interaction: Applications and Services** Masaaki Kurosu, 2013-07-01 The five volume set LNCS 8004-8008 constitutes the refereed proceedings of the 15th International Conference on Human Computer Interaction HCII 2013 held in Las Vegas NV USA in July 2013. The total of 1666 papers and 303 posters presented at the HCII 2013 conferences was carefully reviewed and selected from 5210 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of Human Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. This volume contains papers in the thematic area of human computer Interaction, addressing the following major topics: HCI in healthcare, games and gamification, HCI in learning and education, in vehicle Interaction.

**Spatial Information Theory** Anthony G. Cohn, 2005-09 This book constitutes the refereed proceedings of the International Conference on Spatial Information Theory COSIT 2005 held in Elliottville NY USA in September 2005. The 30 revised full papers presented were carefully reviewed and selected from 82 submissions. The papers are organized in topical sections on: vagueness, uncertainty and gradation, paths and routes, ontologies and semantics, ontologies and spatial relations, spatial reasoning, cognitive maps and spatial reasoning, time change and dynamics, landmarks and navigation, geographic information and spatial behaviour.

**Storying the World** Rita Irwin, Erika Hasebe-Ludt, Anita Sinner, 2019-03-06 Bringing together Carl Leggo's most significant contributions over the past 30 years, this book celebrates his work in curriculum studies, English language arts, literacy and life writing, poetry and arts education. Organized around three thematic sections: Loving Language, Narrating, Ruminations and Storying the World, the volume highlights his efforts across interrelated fields of inquiry including narrative and poetic inquiry, contemplative inquiry and social fiction. The text extends the discussion and conversation of curriculum studies and is greatly enhanced with a selection of original poetry by this incomparable poet, scholar and teacher Carl Leggo.

**Ontology Makes Sense** S. Borgo,R. Ferrario,C. Masolo,2019-04-05 Nicola Guarino is widely recognized as one of the founders of applied ontology His deep interest in the subtlest details of theoretical analysis and his vision of ontology as the Rosetta Stone for semantic interoperability guided the development and understanding of this domain His motivations in research stem from the conviction that all science must be for the benefit of society at large and his motto has always been that ontologies are not just for making information systems interoperable but more importantly for ensuring that systems users understand each other He was among the first to recognize that applied ontology must be an interdisciplinary enterprise if it is to capture the intended meaning of the terms used by an information system This book is a collection of essays written in homage to Nicola Guarino a tribute to his many scientific contributions to the discipline of applied ontology The papers presented here reflect the wide variety of research topics that marked Nicola s impact on the applied ontology community They are grouped according to the five general areas addressed by Nicola in his career what is an ontology knowledge engineering ontologies and language ontological categories and relationships and ontologies and applications Nicola Guarino s work and dedication will undoubtedly continue to influence the applied ontology community and this book will be of interest to the many researchers aiming to establish ontologically sound bases for their research areas

*Formal Ontology in Information Systems* Maureen Donnelly,Giancarlo Guizzardi,2012 The complex information systems which have evolved in recent decades rely on robust and coherent representations in order to function Such representations and associated reasoning techniques constitute the modern discipline of formal ontology which is now applied to fields such as artificial intelligence computational linguistics bioinformatics GIS conceptual modeling knowledge engineering information retrieval and the semantic web Ontologies are increasingly employed in a number of complex real world application domains For instance in biology and medicine more and more principle based ontologies are being developed for the description of biological and biomedical phenomena To be effective such ontologies must work well together and as they become more widely used achieving coordinated development presents a significant challenge This book presents collected articles from the 7th International Conference on Formal Ontologies FOIS held in Graz Austria in July 2012 FOIS is a forum which brings together representatives of all major communities involved in the development and application of ontologies to explore both theoretical issues and concrete applications in the field The book is organized in eight sections each of which deals with the ontological aspects of bioinformatics physical entities artifacts and human resources ontology evaluation language and social relations time and events representation and the methodological aspects of ontological engineering Providing a current overview of developments in formal ontology this book will be of interest to all those whose work involves the application of ontologies and to anybody wishing to keep abreast of advances in the field

**The Revival of Pragmatism** Morris Dickstein, 1998-11-23 Although long considered the most distinctive American contribution to philosophy pragmatism with its problem solving emphasis and its contingent view of truth lost popularity in mid century after the advent of World War II the horror of the Holocaust and the dawning of the Cold War Since the 1960s however pragmatism in many guises has again gained prominence finding congenial places to flourish within growing intellectual movements This volume of new essays brings together leading philosophers historians legal scholars social thinkers and literary critics to examine the far reaching effects of this revival As the twenty five intellectuals who take part in this discussion show pragmatism has become a complex terrain on which a rich variety of contemporary debates have been played out Contributors such as Richard Rorty Stanley Cavell Nancy Fraser Robert Westbrook Hilary Putnam and Morris Dickstein trace pragmatism s cultural and intellectual evolution consider its connection to democracy and discuss its complex relationship to the work of Emerson Nietzsche and Wittgenstein They show the influence of pragmatism on black intellectuals such as W E B Du Bois explore its view of poetic language and debate its effects on social science history and jurisprudence Also including essays by critics of the revival such as Alan Wolfe and John Patrick Diggins the volume concludes with a response to the whole collection from Stanley Fish Including an extensive bibliography this interdisciplinary work provides an in depth and broadly gauged introduction to pragmatism one that will be crucial for understanding the shape of the transformations taking place in the American social and philosophical scene at the end of the twentieth century Contributors Richard Bernstein David Bromwich Ray Carney Stanley Cavell Morris Dickstein John Patrick Diggins Stanley Fish Nancy Fraser Thomas C Grey Giles Gunn Hans Joas James T Kloppenberg David Luban Louis Menand Sidney Morgenbesser Richard Poirier Richard A Posner Ross Posnock Hilary Putnam Ruth Anna Putnam Richard Rorty Michel Rosenfeld Richard H Weisberg Robert B Westbrook Alan Wolfe

### **Formal Ontology in Information Systems P.**

Garbacz, O. Kutz, 2014-09-05 Formal Ontology in Information Systems FOIS is the flagship conference of the International Association for Ontology and its Applications IAOA Its interdisciplinary research focus lies at the intersection of philosophical ontology linguistics logic cognitive science and computer science as well as in the applications of ontological analysis to conceptual modeling knowledge engineering knowledge management information systems development library and information science scientific research and semantic technologies in general As in previous years FOIS 2014 was a nexus of interdisciplinary research and communication The current proceedings is divided into four main sections dealing with foundations processes agency and dispositions methods and tools and applications The last of these covers a broad spectrum of areas including in particular biology and medicine engineering and economy For the first time in its history the conference hosted a special track an ontology competition the aim of which was to encourage authors to make their ontologies publicly available and to allow them to be evaluated according to a set of predetermined criteria Papers discussing these ontologies can also be found in this volume The book will be of interest to all those whose work involves the application of ontologies
