Cancer Targeted Drug Delivery

You Han Bae,Randall J. Mersny,Kinam Park,2013-08-31 This book was conceived from a simple question as to why cancer is so difficult to treat Ultimately we want to find ways to cure cancers but that may be an elusive dream at least with the technologies we have now and expect to have in the near future This leads the question of whether it is possible to improve current cancer treatment methods especially from the perspective of enhancing targeted drug delivery to tumors This volume is designed to provide information related to the difficulties in treating cancers through targeted drug delivery our current understanding of cancer biology and potential technologies that might be used to achieve enhanced drug delivery to tumors An ideal drug delivery system for treating cancers would maximize the therapeutic efficacy with minimal side effects in clinical applications The seemingly improved anticancer efficacy of the current nanoparticle based formulations needs to be viewed from the context of very poor success rates for translation to human applications The results of in vitro cell culture models and small animal in vivo experiments have not been extrapolated to clinical applications Finding the reasons for the lack of successful translation is required if we are to discover approaches to substantially extend the survival time of cancer patients and hopefully identify cures Cancer Targeted Drug Delivery Elusive Dream describes some answers of achieving the so far elusive dream of treating cancers like other chronic diseases with therapies that focus using improved drug delivery systems designed to better align with the unique biological and physiological properties of cancer

Psycho-Oncology

Thomas N. Wise,Massimo Biondi,Anna Costantini,2013 Psycho oncology was written to assist oncologists physicians psychiatrists and other mental health clinicians and hospital chaplains in understanding and offering supportive treatment to the more than 40% of individuals who will receive a cancer diagnosis during their lifetime

Oncothermia: Principles and Practices

Andras Szasz,Nora Szasz,Oliver Szasz,2010-11-23 Oncothermia is the next generation medical innovation that delivers selective controlled and deep energy for cancer treatment The basic principles for oncothermia stem from oncological hyperthermia the oldest approach to treating cancer Nevertheless hyperthermia has been wrought with significant

controversy mostly stemming from shortcomings of controlled energy delivery. Oncothermia has been able to overcome these insufficiencies and prove to be a controlled, safe and efficacious treatment option. This book is the first attempt to elucidate the theory and practice of oncothermia based on rigorous mathematical and biophysical analysis, not centered on the temperature increase. It is supported by numerous in vitro and in vivo findings and twenty years of clinical experience. This book will help scientists, researchers and medical practitioners in understanding the scientific and conceptual underpinnings of oncothermia and will add another valuable tool in the fight against cancer. Professor Andras Szasz is the inventor of oncothermia and the Head of St Istvan University's Biotechnics Department in Hungary. He has published over 300 papers and lectured at various universities around the world. Dr Oliver Szasz is the managing director of Oncotherm, the global manufacturer and distributor of medical devices for cancer treatment used in Europe and Asia since the late 1980s. Dr Nora Szasz is currently a management consultant in healthcare for McKinsey Co.

It is an excellent starting point for students of palliative care which makes an important contribution to any library. Centers of the Cancer Universe Donald L. Trump, Eric T. Rosenthal, 2021-10-11. A 2022 Choice Reviews Outstanding Academic Title. An important history of the development of cancer centers of excellence and the revolution in cancer treatment. In the 1960s a coalition of concerned citizens, scientists and politicians joined forces to convince the federal government to focus its efforts on conquering cancer. The National Cancer Act of 1971 resulted and was signed into law on December 23, 1971, by President Nixon. The national War on Cancer was declared with some leaders naively arguing that the disease would be conquered by the nation's bicentennial, a mere five years in the future. Over the next five decades, scientific discoveries demonstrated the great complexity of what had formerly been thought of as a single disease. With the advent of the genetic characterization of cancers, it is now recognized that there are almost an infinite number of cancers as defined by their many genetic mutations. The National Cancer Act established the infrastructure for the designation of centers by the National Cancer Institute (NCI) and these centers have evolved into models of multidisciplinary collaborative cancer research, treatment and prevention, contributing to a reduction in cancer mortality and increase in quality of life and survival that has translated into more than 17 million cancer survivors in the United States in 2021.

Centers of the Cancer Universe: A Half Century of Progress Against Cancer tells the story of how cancer research was not front and center at most universities and research institutions before the National Cancer Act of 1971 and why many physicians were reluctant even to treat patients with cancer in the early 20th century. It follows the behind-the-scenes lobbying, resistance and negotiating that preceded signing the Act into law and how the cancer centers of today came to fruition and shaped how cancer research, clinical trials and treatment would be conducted.
