Saltpeter David Cressy, 2013-01-11 This is the story of saltpeter the vital but mysterious substance craved by governments from the Tudors to the Victorians as an inestimable treasure National security depended on control of this organic material that had both mystical and mineral properties Derived from soil enriched with dung and urine it provided the heart or mother of gunpowder without which no musket or cannon could be fired Its acquisition involved alchemical knowledge exotic technology intrusions into people's lives and eventual dominance of the world's oceans The quest for saltpeter caused widespread vexation in Tudor and Stuart England as crown agents dug in homes and barns and even churches Governments hungry for it purchased supplies from overseas merchants transferred skills from foreign experts and extended patronage to ingenious schemers while the hated saltpetermen intruded on private ground Eventually huge saltpeter imports from India relieved this social pressure and by the eighteenth century positioned Britain as a global imperial power the governments of revolutionary America and ancien régime France on the other hand were forced to find alternative sources of this treasured substance In the end it was only with the development of chemical explosives in the late Victorian period that dependency on saltpeter finally declined *Saltpeter the Mother of Gunpowder* tells this fascinating story for the first time Lively and entertaining in its own right it is also a tale with far reaching implications As David Cressy's engaging narrative makes clear the story of saltpeter is vital not only in explaining the inter connected military scientific and political revolutions of the seventeenth century it also played a key role in the formation of the centralized British nation state and that state's subsequent dominance of the waves in the eighteenth and nineteenth centuries *The Oxford Handbook of the European Bronze Age* Harry Fokkens, Anthony Harding, 2013-06-27 The Oxford Handbook of the European Bronze Age is a wide ranging survey of a crucial period in prehistory during which many social economic and technological

changes took place Written by expert specialists in the field the book provides coverage both of the themes that characterize the period and of the specific developments that took place in the various countries of Europe After an introduction and a discussion of chronology successive chapters deal with settlement studies burial analysis hoards and hoarding monumentality rock art cosmology gender and trade as well as a series of articles on specific technologies and crafts such as transport metals glass salt textiles and weighing The second half of the book covers each country in turn From Ireland to Russia Scandinavia to Sicily every area is considered and up to date information on important recent finds is discussed in detail The book is the first to consider the whole of the European Bronze Age in both geographical and thematic terms and will be the standard book on the subject for the foreseeable future
