International Symposium on Formal Methods held in Newcastle upon Tyne UK during July 18-22 2005 Formal Methods Europe FME [www.fmeurope.org](http://www.fmeurope.org) is an independent association which aims to stimulate the use of and research on formal methods for system development FME conferences began with a VDM Europe symposium in 1987 Since then the meetings have grown and have been held about once every 18 months Throughout the years the symposia have been notably successful in bringing together researchers tool developers vendors and users both from academia and from industry Formal Methods 2005 confirms this success We received 130 submissions to the main conference from all over the world Each submission was carefully refereed by at least three reviewers Then after an intensive in depth discussion the Program Committee selected 31 papers for presentation at the conference They form the bulk of this volume We would like to thank all the Program Committee members and the referees for their excellent and efficient work Apart from the selected contributions the Committee invited three keynote lectures from Mathai Joseph Marie Claude Gaudel and Chris Johnson You will find the abstracts papers for their keynote lectures in this volume as well

An innovation for the FM2005 program was a panel discussion on the history of formal methods with Jean Raymond Abrial Dines Bjørner Jim Horning and Cli Jones as panelists Unfortunately it was not possible to reflect this event in the current volume but you will find the material documenting it elsewhere see the conference Web page FME 2003: Formal Methods Keijiro Araki, 2003-08-27 This book constitutes the refereed proceedings of the International Symposium of Formal Methods Europe FME 2003 held in Pisa Italy in September 2003 The 44 revised full papers presented together with 5 invited papers were carefully reviewed and selected from 144 submissions The papers are organized in topical sections on industrial issues control systems and applications communication system verification co specification and compilers composition Java object orientation and modularity model checking parallel processes program checking and testing B method and security **Don Pigozzi on Abstract Algebraic Logic, Universal Algebra, and Computer Science** Janusz Czelakowski, 2018-03-20 This book celebrates the work of Don Pigozzi on the occasion of his 80th birthday In addition to articles written by leading specialists and his disciples it presents Pigozzi's scientific output and discusses his impact on the development of science The book both catalogues his works and offers an extensive profile of Pigozzi as a person sketching the most important events not

only related to his scientific activity but also from his personal life It reflects Pigozzi s contribution to the rise and development of areas such as abstract algebraic logic AAL universal algebra and computer science and introduces new scientific results Some of the papers also present chronologically ordered facts relating to the development of the disciplines he contributed to especially abstract algebraic logic The book offers valuable source material for historians of science especially those interested in history of mathematics and logic

### **Formal Engineering for Industrial Software**

**Development** Shaoying Liu,2013-03-09 In any serious engineering discipline it would be unthinkable to construct a large system without having a precise notion of what is to be built and without verifying how the system is expected to function Software engineering is no different in this respect Formal methods involve the use of mathematical notation and calculus in software development such methods are difficult to apply to large scale systems with practical constraints e g limited developer skills time and budget restrictions changing requirements Here Liu claims that formal engineering methods may bridge this gap He advocates the incorporation of mathematical notation into the software engineering process thus substantially improving the rigor comprehensibility and effectiveness of the methods commonly used in industry This book provides an introduction to the SOFL Structured Object Oriented Formal Language method that was designed and industry tested by the author Written in a style suitable for lecture courses or for use by professionals there are numerous exercises and a significant real world case study so the readers are provided with all the knowledge and examples needed to successfully apply the method in their own projects

### **Formal Methods for Industrial Critical Systems**

Stefania Gnesi,Tiziana Margaria,2012-11-27 Today formal methods are widely recognized as an essential step in the design process of industrial safety critical systems In its more general definition the term formal methods encompasses all notations having a precise mathematical semantics together with their associated analysis methods that allow description and reasoning about the behavior of a system in a formal manner Growing out of more than a decade of award winning collaborative work within the European Research Consortium for Informatics and Mathematics Formal Methods for Industrial Critical Systems A Survey of Applications presents a number of mainstream formal methods currently used for designing industrial critical systems with a focus on model checking The purpose of the book is threefold to reduce the effort required to learn formal methods which has been a major drawback for their industrial dissemination to help designers to adopt the formal methods which are most appropriate for their systems and to offer a panel of state of the art techniques and tools for analyzing critical systems

### **Hybrid Systems: Computation and**

**Control** Freek Wiedijk, Oded Maler, Amir Pnueli, 2003-07-01 This volume contains the proceedings of the Sixth Workshop on Hybrid Systems Computation and Control HSCC 2003 which was held in Prague during April 3-5 2003. The Hybrid Systems workshops attract researchers interested in the modeling, analysis, control, and implementation of systems which involve the interaction of both discrete and continuous state dynamics. The newest results and latest developments in hybrid system models, formal methods for analysis and control, computational tools, as well as new applications and examples are presented at these annual meetings. The Sixth Workshop continued the series of workshops held in Grenoble, France (HART 97), Berkeley, California, USA (HSCC 98), Nijmegen, The Netherlands (HSCC 99), Pittsburgh, Pennsylvania, USA (HSCC 2000), Rome, Italy (HSCC 2001), and Stanford, California, USA (HSCC 2002). Proceedings of these workshops have been published by Springer Verlag in the Lecture Notes in Computer Science (LNCS) series. This year we assembled a technical program committee with a broad expertise in formal methods, computer science, control theory, applied mathematics, and artificial intelligence. We received a set of 75 high quality submitted papers. After detailed review and discussion of these papers by the program committee, 36 papers were accepted for presentation at the workshop, and the final versions of these papers appear in this volume.

Hybrid Systems: Computation and Control Oded Maler, Amir Pnueli, 2003-03-18 This book constitutes the refereed proceedings of the 6th International Workshop on Hybrid Systems Computation and Control HSCC 2003 held in Prague, Czech Republic, in April 2003.
