Formal Issues In Austronesian Linguistics:

Formal Issues in Austronesian Linguistics I. Paul, V. Phillips, Lisa Travis, 2013-03-09 Austronesian languages have long raised interesting questions for generative theories of syntax and morphology. The papers in this volume encompass some of these traditional questions and place them in newer theoretical contexts. Some of the papers also address new issues which add to our understanding of members of this language family on one side and the nature of linguistic theories on the other. There are three broad issues that re-occur throughout the volume: the role and analysis of verbal morphology, the nature of the subject or the topic in these languages and the interaction of syntax and specificity. The papers in this volume show that as formal theories become more precise, a wider range of language data can be captured and as the inventory of language data grows, the accuracy of formal linguistic theories improves. Multiple Wh-Fronting Cedric Boeckx, Kleanthes Grohmann, 2003-08-21 Typological differences in the formation of multiple Wh questions are well known. One option is fronting all Wh phrases to the sentence periphery. The contributions to this volume all explore this option from a number of perspectives. Topics covered include finer investigations of the classic multiple Wh fronting languages such as the South Slavic languages Bulgarian and Serbo-Croatian, extensions to less well studied languages Basque, Malagasy, Persian, Yiddish, explorations for languages that don't obviously fall into this category, German, Hungarian, peripheral effects, optionality of fronting, Superiority vs. Anti-Superiority etc., interface issues with semantics, pragmatics and phonology, and simply theoretical approaches aiming to capture the mechanisms involved in multiple Wh fronting strategies. The theoretical framework adopted throughout is the Minimalist Program, viewed from different angles. This volume brings together some of the leading experts on the syntax of Wh questions and offers up-to-date analyses of the topic. It will be indispensable for scholars investigating multiple Wh questions and will find an appropriate audience in advanced students and faculty alike. The End of Argument Structure? Maria Cristina Cuervo, Yves Roberge, 2012 Includes papers that explore the issues and re-assess generally accepted premises on the relationship between lexical meaning and the morphosyntax of sentences by confronting two competing approaches to this issue. Syntax and its Limits Raffaella Folli, Christina Sevdali, Robert Truswell, 2013-12-05 In this book leading linguists explore the empirical scope of syntactic theory by concentrating on a set of phenomena for which both syntactic and nonsyntactic analyses initially appear plausible. Exploring the nature of such phenomena permits a deeper understanding of the nature of syntax and of neighbouring modules and their interaction. The book contributes to both traditional work in generative syntax and to the recent emphasis placed on questions related to the interfaces. The major topics covered include areas of current intensive research within the Minimalist Program and syntactic theory more generally such as constraints on scope and binding, relations, information structural effects on syntactic structure, the structure of words and idioms, argument and event structural alternations and the nature of the relations between syntactic, semantic and phonological representations. After the editors' introduction, the volume is organized into four thematic sections.

architectures syntax and information structure syntax and the lexicon and lexical items at the interfaces The volume is of interest to syntactic theorists as well as linguists and cognitive scientists working in neighbouring disciplines such as lexical and compositional semantics pragmatics and discourse structure and morphophonology and anyone with an interest in the modular architecture of the language faculty **Semantics** Claudia Maienborn,Klaus von Heusinger,Paul Portner,2011

Quantification Lisa Matthewson,2008 This volume presents articles by formal linguists on quantification in relatively understudied languages The ten contributions provide analysis of quantificational phenomena in languages from nine different families Eskimo Aleut Algonquian Na Dene Austronesian Basque Quechua Otomanguean Bantu and Chadic Approximately half of the papers present systematic overviews of quantificational phenomena in the respective languages the remainder of the papers present theoretical analyses of specific quantificational constructions The cross linguistic focus of

this volume enables standard theories of quantification to be challenged by languages other than those for which they were originally designed The volume as a whole also uncovers a number of cross linguistically common properties in the realm of quantification The research presented here forms part of a growing trend towards formal study of understudied languages This is a process which will ultimately lead us to a greatly enriched understanding of the universal human language faculty The authors are all experts on their respective languages most with many years field experience All the authors have theoretical expertise in the area of quantification This book will be of interest to semanticists and syntacticians working on quantification to specialists in the languages discussed and to semantic and syntactic fieldworkers This volume presents articles on quantification in relatively understudied languages The authors are all experts on their respective languages

Morphological Metatheory Daniel Siddiqi, Heidi Harley, 2016-06-29 The field of morphology is particularly heterogeneous Investigators differ on key points at every level of theory These divisions are not minor issues about technical implementation but rather are foundational issues that mold the underlying anatomy of any theory The field has developed very rapidly both theoretically and methodologically giving rise to many competing theories and varied hypotheses Many drastically different and often contradictory models and foundational hypotheses have been proposed Theories diverge with respect to everything from foundational architectural assumptions to the specific combinatorial mechanisms used to derive complex words Today these distinct models of word formation largely exist in parallel mostly without proponents confronting or discussing these differences in any major forum After forty years of fast paced growth in the field morphologists are in need of a moment to take a breath and survey the drastically different points of view within the field This volume provides such a moment

Deriving Nominals Dimitrios Ntelitheos, 2012-07-25 This book provides original fieldwork data uniquely generating all Malagasy deverbal nominals from a single structure building mechanism allowing variable syntactic attachment heights for different nominalizers and tracing the derivation of participant nominals to a relative clause source **Semantics - Lexical Structures and Adjectives** Claudia Maienborn, Klaus von Heusinger, Paul Portner, 2019-02-19 Discover vital research on the lexical and cognitive meanings of words In this exciting book from a team of world class researchers in depth articles explain a wide range of topics including thematic roles sense relation ambiguity and comparison The authors focus on the cognitive and conceptual structure of words and their meaning extensions such as coercion metaphors and metonymies The book features highly cited material available in paperback for the first time since its publication and is an essential starting point for anyone interested in lexical semantics especially where it meets other cognitive and conceptual research Historical Linguistics 2001 Barry J. Blake, Kate Burridge, Jo Taylor, 2003-01-01 This is a selection of papers from the 15th International Conference on Historical Linguistics held in Melbourne 13 17 August 2001 hosted by the Linguistics Program at La Trobe University The papers range from the general theoretical to the study of particular languages and embrace most areas of linguistics particularly morpho syntax Gender and Noun Classification Eric Mathieu, Myriam Dali, Gita Zareikar, 2019 This

volume explores the many ways by which natural languages categorize nouns into genders or classes The findings in the volume have significant implications for syntactic theory and theories of interpretation and contribute to a greater understanding of the interplay between inflection and derivation **Modular Design of Grammar** I Wayan Arka,Ash Asudeh,Tracy Holloway King,2021 This volume presents the latest research in linguistic modules and interfaces in Lexical Functional Grammar It draws on data from a range of typologically diverse languages including Arabic Icelandic Kelabit Polish and Urdu and will be of interest to all those working on linguistic interfaces from a variety of theoretical standpoints

Differential Subject Marking Helen de Hoop,Peter de Swart,2007-12-04 Although almost all sentences have subjects not all sentences encode their subjects in the same way Some languages overtly mark some subjects but not others depending on certain features of the subject argument or the sentence in which the subject figures This phenomenon is known as Differential Subject Marking DSM Languages differ in which conditions govern DSM Some languages differentiate their subjects on the basis of semantic features of the argument such as thematic role volitionality animacy whereas others differentiate on the basis of clausal features such as tense aspect and the main dependent clause distinction DSM comes in different formal guises case marking agreement inverse systems and voice alternations Relatively much is known about cross linguistic variation in the marking of subjects yet little attempt has been made to formalize the facts This volume aims to unify formal approaches to language and presents both specific case studies of DSM and theoretical approaches **The**

Oxford Guide to the Malayo-Polynesian Languages of Southeast Asia Alexander Adelaar,Antoinette Schapper,2024-10-17 This volume presents the most wide ranging treatment available today of the Malayo Polynesian languages of Southeast Asia and their outliers a group of more than 800 languages belonging to the wider Austronesian family It brings together leading scholars and junior researchers to offer a comprehensive account of the historical relations typological diversity and varied sociolinguistic issues that characterize this group of languages including current debates in their prehistories and descriptive priorities for future study The book is divided into four parts Part I deals with historical linguistics including discussion of human genetics archaeology and cultural history Chapters in Part II explore language contact between Malayo Polynesian and unrelated languages as well as sociolinguistic issues such as multilingualism language policy and language endangerment Part III provides detailed overviews of the different groupings of Malayo Polynesian languages while Part IV offers in depth studies of important typological features across the whole linguistic area The Oxford Guide to the Malayo Polynesian Languages of Southeast Asia will be an essential reference for students and researchers specializing in Austronesian languages and for typologists and comparative linguists more broadly *Cleft Structures* Katharina Hartmann,Tonjes Veenstra,2013-11-15 The phenomenon of clefts is beyond doubt a golden oldie It has captivated linguists of different disciplines for decades The fascination arises from the unique syntax of clefts in interaction with their pragmatic and semantic interpretation Clefts structure sentences according to the information state of the

constituents contained in them. They are special as they exhibit a rather uncommon syntactic form to achieve the separation of the prominent part either focal or topical from the background of the clause. Despite the long lasting interest in clefts linguists have not yet come to an agreement on many basic questions. The articles contained in this volume address these issues from new theoretical and empirical perspectives. Based on data from about 50 languages from all over the world this volume presents new arguments for the proper derivation of clefts and contributes to the ongoing debate on the information structural impact of cleft structures. Theoretically it combines modern syntactic theorizing with investigations at the interface between grammar and information structure.

Movement in Language Norvin Richards, 2001. This book is the most comprehensive integrated explanatory account yet published of the properties of question formations and their variation across languages. It makes an important contribution to the current debate over whether syntax should be understood derivationally, arguing that the best model of language is one in which sentences are constructed in a series of operations that precede or follow each other in time. The central problem it addresses is the nature of the difference between a languages in which all wh words move overtly to a clause initial position exemplified by Bulgarian b languages in which one wh phrase moves per clause but all others remain in situ exemplified by English and c languages in which there is no overt movement at all exemplified by Japanese. Professor Richards focuses on the nature of syntactic movement in order to see what this reveals about the syntactic derivation. He considers the nature of interactions between movement operations and investigates the behaviour of multiple overt wh movement, scrambling, cliticization and object shift. His general conclusions about the relationship between movement and multiple specifiers follow straightforwardly from basic principles of Shortest Move and Shortest Attract. He develops a PF imposed well formedness condition on movement chains, essentially a requirement that a single member of the chain be unambiguously identified as the copy to be pronounced, which allows for the development of theories of anti-agreement, the trace effect and the conditions on participial agreement in Romance among other phenomena. He defends the claim that well formed dependencies can improve the status of ill formed dependencies created later in the derivation, illustrating the explanatory power under certain structural conditions of his Principle of Minimal Compliance. He uses data on the locality of wh movement to argue that the Principle of Minimal Compliance is responsible for a number of the apparent distinctions between overt and covert movement. This book will interest syntacticians at graduate level and above as well as linguistic theorists concerned with the syntax semantics interface.

Grammaticalization as Economy Elly van Gelderen, 2004-08-31. This book provides much detail on the changes involving the grammaticalization of personal and relative pronouns, topicalized nominals, complementizers, adverbs, prepositions, modals, perception verbs and aspectual markers. It accounts for these changes in terms of two structural economy principles. Head Preference expresses that single words i.e. heads are used to build structures rather than full phrases and Late Merge states that waiting as late as possible to merge i.e. be added to the structure is preferred over

movement The book also discusses grammar external processes e g prescriptivist rules that inhibit change and innovations that replenish the grammaticalized element Most of the changes involve the extended CP and IP as elements grammaticalize clause boundaries disappear Cross linguistic differences exist as to whether the CP IP and VP are all present and split and this is formulated as the Layer Principle Changes involving the CP are typically brought about by Head Preference whereas those involving the IP and VP by Late Merge
