Fouling of Heat Exchangers T.R. Bott,1995-04-13 This unique and comprehensive text considers all aspects of heat exchanger fouling from the basic science of how surfaces become fouled to very practical ways of mitigating the problem and from mathematical modelling of different fouling mechanisms to practical methods of heat exchanger cleaning The problems that restrict the efficient operation of equipment are described and the costs some of them hidden costs that are associated with the fouling of heat exchangers are discussed Some simple concepts and models of the fouling processes are presented as part of the introduction to the subject Advice on the selection design installation and commissioning of heat exchangers to minimise fouling is given A large part of the text is devoted to the use of chemical and other additives to reduce or eliminate the problem of fouling Another large section is designed to give information on both on line and off line cleaning of heat exchangers One of the difficulties faced by designers and operators of heat exchangers is anticipating the likely extent of fouling problems to be encountered with different flow streams Another large section addresses the question and describes methods that have been used in attempting to define fouling potential The book concludes with a chapter on how fouling information can be obtained using plant data field tests and laboratory studies *Advances in Heat Transfer* ,1999-02-24 *Advances in Heat Transfer* is designed to fill the information gap between regularly scheduled journals and university level textbooks by providing in depth review articles over a broader scope than is allowable in either journals or texts *Fouling in Refineries* James G. Speight,2015-05-14 *Fouling in Refineries* is an important and ongoing problem that directly affects energy efficiency resulting in increased costs production losses and even unit shutdown requiring costly expenditures to clean up equipment and return capacity to positive levels This text addresses this common challenge for the hydrocarbon processing community within each unit of the refinery As refineries today face a greater challenge of accepting harder to process heavier crudes and the ongoing flow of the lighter shale oil feedstocks resulting in bigger challenges to balance product stability within their process equipment this text seeks to inform all relative refinery personnel on how to monitor fouling characterize the deposits and follow all available treatments With basic modeling and chemistry of fouling and each unit covered users will learn how to operate at maximum production rates and elongate the efficiency of their refinery s capacity Presents an understanding of the breakdown of fouling per refinery unit including distillation and coking units Provides all the factors crude types and refining blends that cause fouling especially the unconventional feedstocks and high acid crudes used today Helps users develop an analysis based treatment and control strategy that empowers them to operate refinery equipment at a level that prevents fouling from occurring *PHYSICAL, CHEMICAL AND BIOLOGICAL ASPECTS OF WATER -Volume I* ,2010-02-23 *Physical Chemical and Biological Aspects of Water* is a component of Encyclopedia of Water Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The volume presents state of the art subject matter of various

Melo,T.R. Bott,Carlos A. Bernardo,2012-12-06 The fouling of heat exchangers reactors and catalysts remains one of the most urgent problems facing the process industries Over the past ten years there has been limited research and investigation into the underlying mechanisms which give rise to this problem For convenience particularly in heat exchanger technology the mechanisms involved have been subdivided into different subject areas It is often the situation that individuals or groups of workers have concentrated efforts in one or two of these specialist areas and there is a need to integrate the ideas across the whole spectrum of the subject In addition topics such as adhesion and surface phenomena have not been properly taken into account up till now in the assessment of the fouling processes For this reason it was considered essential that the recognised experts from around the world who are actively concerned with research development and design in the field should meet and exchange ideas and experience Such a meeting was held at Alvor Portugal in May 1987 sponsored by the NATO Advanced Study Institutes Programme In order to obtain a common basis for the work of the Advanced Study Institute the whole technological field was reviewed right from the basic concepts to the frontiers of present knowledge Each invited contributor was asked to make an overall presentation covering his or her area of expertise
