*Internet Tiered Services* George N. Rouskas, 2009-04-21 As telecommunications products and services have become an essential part of everyday life consumers have at the same time grown intimately familiar with the concept of tiered pricing that is associated with such services With tiered service structures users may select from a small set of tiers that offer progressively higher levels of service with a corresponding increase in price Tiered structures have been applied in several forms to wireless services e.g. characterized by the amount of voice minutes number of text messages or the size of one's circle of friends to whom voice calls are free Internet broadband access e.g. the access speed or volume of monthly transferred data and digital TV offerings e.g. the number of channels included among others Service tiering is a form of market segmentation which if applied appropriately benefits both providers and consumers by making available services and associated price points that reflect the diversity in consumers' needs and ability to pay The purpose of this book is to develop a theoretical framework for reasoning about and pricing Internet tiered services as well as a practical algorithmic toolset for network providers to develop customized menus of service offerings We provide a comprehensive study of the design sizing and pricing of tiered structures for Internet services and we illustrate their potential in simplifying the operation of complex components such as packet schedulers

**Work Behavior of the World's Poor** Mohammed Sharif, 2018-02-06 This title was first published in 2003 The working poor of the world are observed to engage in long hours in hard jobs and to work more if wages are further reduced Mainstream economics brushes off this tendency to increase labour supply as wages fall as perverse because it does not fit the conventional wisdom and tries to explain it as a result of subsistence mentality limited aspiration or target income behaviour of the poor This however ignores the observed fact that the poor work long hard hours but most of the time fail to meet their minimum needs of subsistence and live impoverished lives in absolute poverty deficient of both food and physical rest This book postulates that the observed behaviour is the result of economic distress the working poor suffer and analyses it as a rational behaviour using the conventional utility maximization framework and derives both

theoretical and empirical results consistent with the observation This book aims to correct a serious misconception persisting in the literature relating to the working poor labour supply behaviour that is almost universally observed It also goes onto develop using the supply function a methodology to determine the standard of subsistence income and physical rest for the worker     *Foundations of Economic Method* Lawrence A.
