of Microvita are to be distinguished biological psychological and spiritual Energization of the chakras in meditation can stimulate Microvita to cause biological regeneration and disease curing as well as to attain higher consciousness attributes Then ideating on and illuminating the mind with cosmic consciousness can attract spiritual Microvita to help rejuvenate the mind by dissolving its embedded psychic impressions leading to self realization Thus it can be seen that Microvita have a distinctive role in guiding our life journey towards its cosmic abode I greatly complement Dr Rudolph for this book which will hopefully invoke the interest of many independent minds to explore and discover the new science of Microvita

*FOUNDATIONS OF BIOPOLITICS: Race. Ethno-genopolitics. Population Volume. Migrations* Jacques de Mahieu,2023-08-28 The term biopolitics had long been in use when it was brought into vogue in Academia by Michel Foucault to designate the liberal administration of health hygiene food sexuality the birth rate etc through various flexible and continuous measures such as insurance pressures proposed hygiene rules incentive policies with a view to controlling individuals and populations The French sociologist Jacques de Mahieu 1915 1990 who used it as early as in the 1950s gives it a quite different meaning In the course of our research we shall see that the ethnic problem when it has been posed has been too narrowly defined or to be more precise that alongside the problem of races as such there is a question of the same order which is already hinted at in everyday language We say of a human being as we do of a horse that it has breeding This does not mean that he belongs to a particular ethnic group but rather that he is distinguished by certain characters within his

ethnic group Once we have established that these characters are hereditary we will have to admit willingly or not that within racial groups there are categories of the same biopsychic nature as ethnic communities in the true sense of the word And once we have seen that these categories are of social importance we will have to supplement ethnopolitics with genopolitics and consider all hereditary processes insofar as they play a part in the life of human communities This is what biopolitics is all about As a preamble to the presentation of genopolitics and ethnopolitics a number of questions which are also the subject of Julius Evola's Elements of Racial Education are addressed the fact of race the zoological concept of race the fallacy of the pure race heredity the double effect of crossbreeding mutation heredity of acquired traits hereditary memory the action of the environment the double effect of the environment limits to environmental action race creation Ethnopolitics is about race classification the melting pot the inequality of races race and community polyethnic communities racial specialisation in an organic society slavery segregation race dialectics in a polyethnic community dialectic of races in the world Genopolitics studies biopsychology and social order biopsychic social specialisation the family lineage the social stratum the origins of social stratification hereditary differentiation and functional specialisation natural selection economic differentiation backward selection aristocracy and elites etc Population volume is about the demographic factor population density natural demographic balance demographic composition active and passive population demographic pace demographic pressure living space etc Finally the study of migrations involves examining emigration and immigration their causes and consequences biotypology of the emigrant the process of assimilation migration planning
