Karst Hydrology and Physical Speleology A. Bögli, 2012-12-06 The present

publication on karst hydrology and physical speleology combines two subjects which have up to now been treated separately. The two fields of knowledge have gone their separate ways less as a result of differences in subject matter than of varying approaches. The focal point in karst hydrology lies in the description of subterranean water with its physical and chemical properties whereas physical speleology describes subterranean cavities with their contents air water and sediments which generally have been created by water. Such cavities can be correctly interpreted only by means of a knowledge of karst hydrology yet they in turn yield indications of the properties of karst water. Karst hydrology and physical speleology are thus two aspects of the subterranean karst phenomenon and should be viewed congruently. This book addresses geologists hydrologists geomorphologists geographers and karstologists above all speleologists as well as all friends of caves especially the cavers among them. Its contents must therefore appeal to two groups on one hand to the academically trained whether university faculty graduates or students who as a rule have the necessary basic knowledge to be able to understand the theoretical comments on the other hand to the laymen who have first hand experience from their own observations in caves but who often do not dispose over the scientific foundation necessary for an understanding of the phenomena. Therefore occasionally more attention will be given to problems of a simpler nature and to questions of technical terminology.

Karst Hydrogeology, Geomorphology and Caves Jo De Waele, Francisco Gutierrez, 2022-08-01 Karst Hydrogeology Geomorphology and Caves A Comprehensive Resource Covering All Aspects of Karst Hydrogeology Geomorphology and Caves This essential book covers all physical chemical and geological aspects of karst science. It reviews current knowledge on hydrogeology geomorphology and caves in karst based on the vast existing literature and investigations carried out by the authors worldwide. The different topics are profusely illustrated with color figures and images from all continents and climates showing the scientific and aesthetic appeal of karst environments. The book covers in a systematic way the significant features of karst rocks the chemistry and kinetics of their dissolution the rate and distribution of karst denudation the unique hydrogeology of karst terrains the landforms endemic to karst the morphology of caves and their diverse sedimentary records and the multiple processes that lead to the formation of underground voids. Overall the work reflects the increasing recognition of karst as a fundamental part of the Earth's dynamic systems and helps readers understand this multidisciplinary field from a holistic and nuts and bolts perspective. Some of the ideas discussed within the book include How karst is gaining importance for human development because of its valuable resources groundwater and associated environmental problems impacts and hazards. The enormous technological developments achieved in recent years. Recent major breakthroughs in the field and their

influence on other scientific disciplines The central role played by karst science for understanding and mitigating global environmental issues global warming depletion of resources human induced hazards For all scientists working in karst and for students and lecturers of karst related programs this book serves as a valuable all in one source It is also a valuable resource for professional hydrogeologists the petroleum industry environmental geologists and of course speleologists the last true geographic explorers in the world **Tebiwa** ,1972 **Catalogue of Fossil Hominids** Kenneth Page Oakley,British Museum (Natural History),1967 Part 2 **Antiquity** Osbert Guy Stanhope Crawford,1994 Includes section Reviews **Studies of Cave Sediments** I.
