Holism A Shoppers Guide:

Holism Jerry Fodor, 1992 The main question addressed in this book is whether individuation of the contents of thoughts and linguistic expressions is inherently holistic The authors consider arguments that are alleged to show that the meaning of a scientific hypothesis depends on the entire theory that entails it or that the content of a concept depends on the entire belief system of which it is part If these arguments are sound then it would follow that the meanings of words sentences hypotheses predictions discourses dialogs texts thoughts and the like are merely derivative The implications of holism about meaning for other philosophical issues intentional explanation translation Realism skepticism etc will also be explored Authors discussed include Quine Davidson Lewis Bennett Block Field Churchland and others The book is intended for all those interested in language mind metaphysics or epistemology **Holism** Jerry Alan Fodor, 1992 **Donald Davidson** Kirk Ludwig, 2003-07-21 Table of contents *A More Perfect Union* Linda Sargent Wood, 2012-10-18 This book uncovers a holistic sensibility in post World War II American culture that challenged Cold War logic and fed some of the century's most powerful social movements This impulse is illustrated by focusing on Rachel Carson Buckminster Fuller Martin Luther King Jr Abraham Maslow Pierre Teilhard de Chardin and the Esalen Institute **Reflections on Spacetime** Ulrich Majer, Heinz-Jürgen Schmidt, 2013-03-14 REFLECTIONS ON SPACETIME FOUNDATIONS PHILOSOPHY AND HISTORY During the academic year 1992/93 an interdisciplinary research group constituted itself at the Zentrum für interdisziplinäre Forschung ZiF in Bielefeld Germany under the title Semantical Aspects of Spacetime Theories in which philosophers and physicists worked on topics in the interpretation and history of relativity theory The present issue consists of contributions resulting from material presented and discussed in the group during the course of that year The scope of the papers ranges from rather specialised issues arising from general relativity such as the problem of referential indeterminacy to foundational questions regarding spacetime in the work of Carnap Weyl and Hilbert It is well known that the General Theory of Relativity GTR admits spacetime models which are exotic in the sense that observers could travel into their own past This poses a number of problems for the physical interpretation of GTR which are also relevant in the philosophy of spacetime It is not enough to exclude these exotic models simply by stating that we live in a non exotic universe because it might be possible to operate time machines by actively changing the topology of the future part of spacetime In his contribution Earman first reviews the attempts of physicists to prove chronology protection theorems CPTs which exclude the operation of time machines under reasonable assumptions **New Idols of the Cave** Christopher Norris, 1997 This book offers a broad based critical survey of recent anti realist arguments in the philosophy of science cultural theory hermeneutics the sociology of knowledge and the interpretation of quantum mechanics *Wittgenstein and the Moral Life* Cora Diamond, 2007 Essays by leading scholars that take as their point of departure Cora Diamond's work on the unity of Wittgenstein's thought and her writings on moral philosophy *Experimental Philosophy of Language: Perspectives, Methods, and Prospects* David

Bordonaba-Plou,2023-06-16 This book presents the current state of experimental philosophy of language drawing attention to corpus methods The volume highlights new trends in experimental philosophy of language thus exploring the future s discipline It includes cross linguistics studies that reveal the differences and similarities in how speakers of different languages use specific terms and scrutinizes methodological advances used in experimental philosophy of language The book also includes politically engaged experimental philosophy of language studies focusing on slurs pejoratives and hate speech The topic s interdisciplinary nature makes the volume of interest to a broad range of scholars across disciplines including philosophy linguistics philology psychology and computational linguistics

Current Issues in Computing and Philosophy A. Briggie,P.A.E. Brey,K. Waelbers,2008-06-20 The theme of this volume is the multi faceted computational turn that is occurring through the interaction of the disciplines of philosophy and computing In computer and information sciences there are significant conceptual and methodological questions that require reflection and analysis Moreover digital information and communication technologies have had tremendous impact on society which raises further philosophical questions This book tries to facilitate the task to continuously work to ensure that its diversity of perspectives and methods proves a source of strength and collaboration rather than a source of instability and disintegration The first three contributions explore the phenomenon of virtual worlds The next four focus on robots and artificial agents Then a group of chapters discusses the relation between human mentality and information processing in computers and the final section covers a broad range of issues at the interface of computers and society

Paradigm Wars Mark B. Woodhouse,1996 In this powerful exploration of worldviews in transition Mark Woodhouse examines current controversies in the quest for an integrative vision of reality These include alternative medicine holistic education spiritual healing and ecofeminism as well as reincarnation the New Physics extraterrestrial visitations and personal growth In the Appendix Fred Mills contributes a pioneering study of sacred geometry

On Concepts, Modules, and Language Roberto G. De Almeida,Lila R. Gleitman,2018 What are the landmarks of the cognitive revolution What are the core topics of modern cognitive science Where is cognitive science heading to Leading cognitive scientists Chomsky Pylyshyn Gallistel and others examine their own work in relation to one of cognitive science s most influential and polemical figures Jerry Fodor

Reconstructing Reason and Representation Murray Clarke,2022-06-07 A study of the philosophical implications of evolutionary psychology suggesting that knowledge is a set of natural kinds housed in the modules of a massively modular mind In Reconstructing Reason and Representation Murray Clarke offers a detailed study of the philosophical implications of evolutionary psychology In doing so he offers new solutions to key problems in epistemology and philosophy of mind including misrepresentation and rationality He proposes a naturalistic approach to reason and representation that is informed by evolutionary psychology and expanding on the massive modularity thesis advanced in work by Leda Cosmides and John Tooby argues for a modular adapticist account of misrepresentation and knowledge Just as the reliability of representation can be defended on the basis of an

account of the proper function of cognitive modularity misrepresentation can be explained through an appeal to the gap theory by noting the divergence between the proper and actual domains of cognitive modules in a massively modular mind Clarke argues for an externalist modular reliabilism by suggesting that evolution has equipped us with generally reliable inferential systems even if they do not always produce true beliefs He argues that reliable deductive and inductive inference occurs only when cognitive modules deal with actual domains that are sufficiently similar to their proper domains This psychologically informed naturalized adapticism leads to the suggestion that knowledge is a set of natural kinds housed in the modules of a massively modular mind Typically the proper function of these cognitive modules is to provide us with truths that enable us to satisfy our basic biological needs Beyond reasoning modules other cognitive modules discussed include the ability to orient ourselves in space and our abilities with language numbers object reasoning and social understanding Clarke also defends Cosmides and Tooby's massive modularity hypothesis against such critics as Jerry Fodor by demonstrating that these critics consistently misrepresent Cosmides and Tooby's position

Faith and Reason Anthony Fisher, Hayden Ramsay, 2004 The first in a new series with Australian

Catholic University this collection of essays deals with two important themes Faith and reason are heavily weighted words They point to elemental aspects of human existence The papers and discussions presented strive to clarify and correlate these basic activities or dimensions of human beings In all the complexities of the possible relationships and interweaving of faith and reason two kinds of questions keep recurring One the one hand what is the value of human intelligence and how is it endorsed and supported by faith On the other hand what is the distinctive intelligence or rationality of faith and how does it relate to the perennial search for wisdom represented in it various philosophical forms Contributors include Marilyn McCord Adams Raimond Gaita John Haldane John McDermott SJ Kevin Hart and Anthony Kelly CSsR

Selves and Other Texts

Joseph Margolis,2010-11-01 Extending his well known investigations into the nature and logic of art and history in the cultural world Joseph Margolis here offers a sustained account of how selves and the cultural phenomena they generate language history action art can be viewed as just as real as the physical nature from which they are emergent while not being reducible to it The book starts off with a review of prominent philosophies of art over the past half century focusing especially on Beardsley Goodman and Danto so as to highlight the need for carefully distinguishing between the metaphysical and epistemological features of physical nature and human culture The second part of the book builds on the first part s analyses of artworks to propose a theory of selves as self interpreting texts Selves and Other Texts aims to develop new ways of understanding the conceptual inseparability of our analysis of physical nature and our analysis of ourselves

The Mind's Provisions

Vincent Descombes,2021-08-10 Vincent Descombes brings together an astonishingly large body of philosophical and anthropological thought to present a thoroughgoing critique of contemporary cognitivism and to develop a powerful new philosophy of the mind Beginning with a critical examination of American cognitivism and French structuralism Descombes launches a more general critique of all philosophies that view the mind in strictly causal terms and suppose that the brain and not the person thinks Providing a broad historical perspective Descombes draws surprising links between cognitivism and earlier anthropological projects such as L vi Strauss s work on the symbolic status of myths He identifies as incoherent both the belief that mental states are detached from the world and the idea that states of mind are brain states these

assumptions beg the question of the relation between mind and brain In place of cognitivism Descombes offers an anthropologically based theory of mind that emphasizes the mind s collective nature Drawing on Wittgenstein he maintains that mental acts are properly attributed to the person not the brain and that states of mind far from being detached from the world require a historical and cultural context for their very intelligibility Available in English for the first time this is the most outstanding work of one of France s finest contemporary philosophers It provides a much needed link between the continental and Anglo American traditions and its impact will extend beyond philosophy to anthropology psychology critical theory and French studies *History and the Study of Religion* Stanley Kent Stowers,2024 What is religion How is religion constituted as a social entity Is religion a useful category for historians anthropologists and sociologists In *History and the Study of Religion* Stanley Stowers addresses these questions and discusses examples from ancient Greek Roman Judean and especially early Christian religion to illustrate a theory of religion as a social kind He explains how ancient Mediterranean religion consisted of four sub kinds the religion of everyday social exchange civic religion the religion of literate and literary experts and the religion of literate experts with political power Through these categories he shows how Christianity arose and succeeded Gray Matters Sanford Goldberg,Andrew Pessin,2015-06-03 *Gray Matters* is a thorough examination of the main topics in recent philosophy of mind It aims at surveying a broad range of issues not all of which can be subsumed under one position or one philosopher s theory In this way the authors avoid neglecting interesting issues out of allegiance to a given theory of mind
