How To Make Soil And Save Earth:

How to Make Soil and Save Earth Allan Shepherd, 2003-06 *Protecting Earth's Land* Valerie Rapp, 2015-08-01 Nearly all living things depend on Earth's land and its resources to survive. But did you know that people do many things that hurt the land? The damage sometimes destroys forests which are home to diverse ecosystems and are important in producing oxygen and water. And in many parts of the world, damaged land produces less food, less wood, and less of many things that people need. We must join together in the quest to find better ways to use and take care of Earth's land. With engaging text and eye-catching images, plus a special Going Green section, this book tells you all about Earth's land and what you can do to protect it.

Animal by-products (ABPs): origins, uses, and European regulations Raffaella Leoci, 2014-06-12 In theory, about 95% of one animal is usable. The remaining 5% is processing losses. From that 95%, about 55% on average of the animal is used for edible products, and the remaining 45% is inedible by-products. The world production of ABPs derived from the meat and animal production industries is approximately 60 million tons per year. It has been estimated that more than 10 million tons of products not destined for direct human consumption derived from healthy animals are produced in the EU every year. A lot of ABPs are commonly used in important productive sectors such as in the pharmaceutical, feed, wool, and leather industries, but notwithstanding, new technologies have widened the possible use of ABPs and derived products. Consequently, a wide range of ABPs are not utilized and are destined to disposal. Further studies are required to hone accuracy and to find and define the appropriate application for the countless substances present in the animal reproductive organs.

Soils and the Environment Gerald Olson, 2012-12-06 As we enter the last decades of the twentieth century, many persistent and perplexing problems continue to afflict humankind. Thus, it is appropriate to address in a new group of books two of the monumental issues that haunt people throughout the world: Soils and the Environment. By Professor Gerald W. Olson is the first book in this new publishing program on Environment, Energy, and Society. The purpose of all these books will be to explore the many interrelated facets of these topics and to provide guidance for dealing with problems and offering ideas for their solutions. Environment and energy are twin problems that occupy what many believe to be opposite sides of a two-headed coin. They are often viewed as being antithetical and incompatible. The various books in this program will try to place in perspective the options that are available to those who design policy and plan and manage societal matters. Typical of books being developed currently are ones on coal resources, environmental geoscience, environmental pollution, land use planning, nuclear energy, mineral resources, and water resources. However, because soils are at the very heart of civilization and provide the building block for human sustenance, it is fitting to inaugurate this series with Dr. Olson's timely analysis of soils. Unfortunately, these most vital resources seem to have low priority in many farming enterprises, urbanization projects, deforestation schemes, and mining and developmental terrain changes.
