Koster Site Archaeology I Edwin R. Hajic, 1990 **Space, Time, and Archaeological Landscapes** Jacqueline Rossignol, LuAnn Wandsnider, 2013-11-11

The last 20 years have witnessed a proliferation of new approaches in archaeological data recovery analysis and theory building that incorporate both new forms of information and new methods for investigating them. The growing importance of survey has meant an expansion of the spatial realm of traditional archaeological data recovery and analysis from its traditional focus on specific locations on the landscape archaeological sites to the incorporation of data both on site and off site from across extensive regions. Evolving survey methods have led to experiments with nonsite and distributional data recovery as well as the critical evaluation of the definition and role of archaeological sites in data recovery and analysis. In both survey and excavation the geomorphological analysis of landscapes has become increasingly important in the analysis of archaeological materials. Ethnoarchaeology the use of ethnography to sharpen archaeological understanding of cultural and natural formation processes has concentrated study on the formation processes underlying the content and structure of archaeological deposits. These actualistic studies consider patterns of deposition at the site level and the material results of human organization at the regional scale. Ethnoarchaeological approaches have also affected research in theoretical ways by expanding investigation into the nature and organization of systems of land use per se thus providing direction for further study of the material results of those systems. Principles of Geoarchaeology Michael R. Waters, 2022-02-22

Geoarchaeological studies can significantly enhance interpretations of human prehistory by allowing archaeologists to decipher from sediments and soils the effects of earth processes on the evidence of human activity. While a number of previous books have provided broad geographic and temporal treatments of geoarchaeology this new volume presents a single author's view intended for North American archaeologists. Waters deals with those aspects of geoarchaeology: stratigraphy, site formation processes and landscape reconstruction most fundamental to archaeology and he focuses on the late Quaternary of North America permitting in depth discussions of the concepts directly applicable to that research. Assuming no prior geologic knowledge on the part of the reader Waters provides a background in fundamental geological processes and the basic tools of geoarchaeology. He then proceeds to relate specific physical processes, microenvironments, deposits and landforms associated with riverine, desert, lake, glacial, cave, coastal and other environments to archaeological site formation, location and context. This practical volume illustrates the contributions of geoarchaeological investigations and demonstrates the need to make such studies an integral part of archaeological research. The text is enhanced by more than a hundred line drawings and photographs.

Falls of the Ohio River David Pollack, Anne Tobbe Bader, Justin N. Carlson, 2021-05-11 Falls of the Ohio River presents current archaeological research on an important landscape feature a series of low cascading rapids along the Ohio River on the border of Kentucky and Indiana Using the perspective of historical ecology and synthesizing data from recent excavations contributors to this volume demonstrate how humans and the environment mutually affected each other in the area for the past 12 000 years These essays show how the Falls region was an attractive place to live due to its diverse ecological zones and its abundance of high quality chert In chronological studies ranging from the Early Archaic to the Late Mississippian periods contributors portray the rapids as at times a boundary between Native American groups living upstream and downstream and at other times a hub where cultures converged and blended into a distinct local identity The essays analyze and track changes in stone tool styles mortuary traditions settlement patterns plant consumption and ceramic production Together the chapters in this volume illustrate that the Falls of the Ohio was a focal point on the human landscape throughout the Holocene era Providing a foundation for future work in this location they show how the region's geography and ecology shaped the ways humans organized themselves within it and how in turn these groups impacted the area through their changing social economic and political circumstances Contributors Anne Tobbe Bader Rick Burdin Justin N Carlson Richard W Jefferies Michael French Robert G McCullough Greg J Maggard Stephen T Mocas Cheryl Ann Munson David Pollack Jack Rossen Christopher W Schmidt Claiborne Daniel Duane B Simpson C Russell Stafford Gary E Stinchcomb Jocelyn C Turner A volume in the Florida Museum of Natural History Ripley P Bullen Series Earth Sciences and Archaeology Paul Goldberg, Vance T. Holliday, C. Reid Ferring, 2013-11-11 Earth Sciences and Archaeology brings together contributions from an experienced group of archaeologists and geologists whose common objective is to present thorough and current reviews of the diverse ways in which methods from the earth sciences can contribute to archaeological research Many areas of research are addressed here including artifact analysis and sourcing

landscape reconstruction and site formation analysis soil micromorphology and geophysical exploration of buried sites

Archaeology has benefited from geological methods in many ways in recent decades However in the past ten to twenty years this informal collaboration between geologists and archaeologists has grown into a formal integration of earth science and archaeology on a significant scale This book allows the contributors to assess where we are in terms of interdisciplinary research which approaches work best in specific situations and where this collaborative approach should progress to in the future

Soils Randall J. Schaetzl, Michael L. Thompson, 2015-04-06 In its first edition *Soils* established itself as the leading textbook in the fields of pedology and soil geomorphology Expanded and fully updated this second edition maintains its highly organized and readable style Suitable as a textbook and a research grade reference the book's introductory chapters in soil morphology mineralogy chemistry physics and organisms prepare the reader for the more advanced treatment that follows Unlike its competitors this textbook devotes considerable space to discussions of soil parent materials and soil mixing along with dating and paleoenvironmental reconstruction techniques applicable to soils Although introductions to widely used soil classification systems are included theory and processes of soil genesis and geomorphology form the backbone of the book Replete with more than 550 high quality figures and photos and a detailed glossary this book will be invaluable for anyone studying soils landforms and landscape change anywhere on the globe

Soils in Archaeological Research Vance T. Holliday, 2004-08-19 Soils invaluable indicators of the nature and history of the physical and human landscape have strongly influenced the cultural record left to archaeologists Not only are they primary reservoirs for artifacts they often encase entire sites And soil forming processes in themselves are an important component of site formation influencing which artifacts features and environmental indicators floral faunal and geological will be destroyed and to what extent and which will be preserved and how well In this book Holliday will address each of these issues in terms of fundamentals as well as in field case histories from all over the world The focus will be on principles of soil geomorphology soil stratigraphy and soil chemistry and their applications in archaeological research

Effects of Scale on Archaeological and Geoscientific Perspectives Julie K. Stein, Angela R. Linse, 1993-01-01

Practical Applications of GIS for Archaeologists Konnie L. Wescott, R. Joe Brandon, 2003-09-02 The use of GIS is the most powerful technology introduced to archaeology since the introduction of carbon 14 dating The most widespread use of this technology has been for the prediction of archaeological site locations This book focuses on the use of GIS for archaeological predictive modeling The contributors include internationally recognized researchers who have been at the forefront of this revolutionary integration of GIS and archaeology as well as first generation researchers who have begun to critically apply this new technology and explore its theoretical implications
