Kristin Lavransdatter Cross:

The Cross Sigrid Undset, 2013-01-31 In this heart wrenching novel by Sigrid Undset *The Cross* brings Kristin's story to a close as the final years of her life are consumed by the Black Death in the final installment in the well known Norwegian trilogy *Kristin Lavransdatter*. Kristin Lavransdatter has lost almost everything she loves. As the Black Death rapidly approaches Norway she once again has to decide what is most important to her. Kristin grapples with her failing marriage and wavering faith while attempting to support eight sons. The once charmingly reckless characters are now facing their greatest challenge yet: the inevitability of their diminishing lives. Completing the trilogy, Sigrid Undset's third *Kristin Lavransdatter* book was originally published in 1922. The author's colourful depiction of 14th century Norway is continued in this final volume as she provides a fascinatingly accurate insight into medieval Scandinavia. Proudly republished by Read Co Books, this new edition of *The Cross* features an excerpt from *Six Scandinavian Novelists* by Alrik Gustafson. An essential addition to the bookshelves of *Kristin Lavransdatter* fans, this volume is the perfect end to the classic Norwegian series.

Kristin Lavransdatter Sigrid Undset, 2009-04 This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book without typos from the publisher. Not indexed. Not illustrated. 1902. Excerpt: earth's radius of moon or other body P moon's horizontal parallax earth's angular semidiameter as seen from the moon f moon's angular semidiameter Now P in circular measure r r in circular measure r r P or radius of earth radii of moon moon's parallax moon's semidiameter Examples 1 Taking the moon's horizontal parallax as 57' and its angular diameter as 32' find its radius in miles assuming the earth's radius to be 4000 miles Here moon's semidiameter $16 \cdot 4000 \cdot 57' / 16 \cdot 32' = 1123$ miles 2 The sun's horizontal parallax being 88" and its angular diameter 32' find its diameter in miles $Am = 872 \cdot 727$ miles 3 The synodic period of Venus being 584 days find the angle gained in each minute of time on the earth round the sun as centre $Am = 1' 54''$ per minute 4 Find the angular velocity with which Venus crosses the sun's disc assuming the distances of Venus and the earth from the sun are as 7 to 10 as given by Bode's Law Since $\sin V = VA / 7 \cdot 3$ But Sr has a relative angular velocity round the sun of $1' 54''$ per minute see Example 3 therefore the relative angular velocity of A V round A is greater than this in the ratio of 7 : 3 which gives an approximate result of $3 \cdot 6''$ per minute the true rate being about $4''$ per minute Annual Parallax 95 We have already seen that no displacement of the observer due to a change of position on the earth's surface could apparently affect the direction of a fixed star. However as the earth in its annual motion describes an orbit of about 92 million miles radius round the sun the different positions in space from which an observer views the fixed stars from time to time throughout the year must be separated. **The Cross** Sigrid Undset, 2011-04-20 The acknowledged masterpiece of the Nobel Prize winning Norwegian novelist Sigrid Undset, *Kristin Lavransdatter* has never been out of print in this country since its first publication in 1927.
