Lethal Laws Animal Testing Human Health And Environmental Policy:

Lethal Laws Alix Fano, 1997-05 For the last 150 years chemicals have been tested on animals for the alleged purpose of protecting the public from their dangerous effects Lethal Laws reveals that using animals as human surrogates is not only unethical it is bad science Alix Fano provides a meticulous analysis of the technical and scientific problems that have plagued animal tests for decades but which have not been forcefully challenged until now She shows how animal testing has been used as an alibi to allow the continued use of thousands of toxic chemicals In a field dominated by male voices this is a pioneering work by a woman that effectively demonstrates the causal link between animal testing and environmental degradation and the subsequent deterioration of human health

International Environmental Law, Policy, and Ethics

Alexander Gillespie, 2014-08-21 This second edition of International Environmental Law Policy and Ethics revises and expands this groundbreaking study into the question of why the environment is protected in the international arena This question is rarely asked because it is assumed that each member of the international community wants to achieve the same ends However in his innovative study of international environmental ethics Alexander Gillespie explodes this myth He shows how nations like individuals create environmental laws and policies which are continually inviting failure as such laws can often be riddled with inconsistencies and be ultimately contradictory in purpose Specifically he seeks a nexus between the reasons why nations protect the environment how these reasons are reflected in law and policy and what complications arise from these choices This book takes account of the numerous developments in international environmental law and policy that have taken place the publication of the first edition most notably at the 2002 World Summit on Sustainable Development and the 2012 Rio 20 United Nations Conference on Sustainable Development Furthermore it addresses recent debates on the economic value of nature and the problems of the illegal trade in species and toxic waste The cultural context has also been considerably advanced in the areas of both intangible and tangible heritage with increasing attention being given to conservation wildlife management and the notion of protected areas The book investigates the ways in which progress has been made regarding humane trapping and killing of animals and how in contrast the Great Apes initiative and similar work with whales have failed Finally the book addresses the fact that while the notion of ecosystem management has been embraced by a number of environmental regimes it has thus far failed as an international philosophy
