Establishing the Rules of the Game Louis Massicotte, André Blais, Antoine Yoshinaka, 2004-01-01 There are an astonishing variety of election laws across contemporary democratic societies In *Establishing the Rules of the Game* Louis Massicotte, André Blais and Antoine Yoshinaka provide the first thorough examination of these laws The study incorporates original data collected from more than sixty democracies around the world and touches on oft ignored yet extremely important aspects of election laws The countries covered by the study include Argentina Brazil Canada France Japan the Netherlands the Philippines Romania and the United Kingdom The authors focus on six dimensions of election laws the right to vote the right to be a candidate the electoral register the agency in charge of the election the procedure for casting votes and the procedure to sort out the winners and losers Massicotte, Blais and Yoshinaka uncover underlying patterns explaining why certain types of country tend to adopt a given sets of rules In general former colonies adopt the same laws as their former mother country There is also a tendency for established democracies to be more inclusive than non established ones The authors point out sociological patterns and review normative and practical arguments for and against each set of rules providing invaluable information for students of elections and democratic theory as well as election practitioners

Francis Alÿs. The Nature of the Game Gerard-Jan Claes ,Stéphane Symons,2023-09-15 In 1999 a short video of a solitary boy kicking an empty bottle up a hill in Mexico City became the first instalment of Children s Games a series of works by artist Francis Alÿs b Antwerp 1959 The ongoing project which now numbers around thirty five works has gradually given shape to an extensive collection of videos of children at play For almost twenty five years Alÿs and his collaborators Felix Blume Julien Devaux and Rafael Ortega have been travelling around the world to document the distinctive ways in which children interact with each other and their physical environment They have gone from remote villages in the Democratic Republic of the Congo Afghanistan Venezuela and Nepal to the mountains of Switzerland and metropolises like Hong Kong and Paris but have also visited the war torn city of Mosul in Iraq the border between Mexico and the United States and the strait of Gibraltar that divides Africa and Europe The resulting images are standing proof of the seriousness of play and of children

s stunning powers of resilience in the face of conflict This volume provides a multidisciplinary perspective to the many layers of Children s Games It includes an interview with Francis Al s and Rafael Ortega a series of essays by well known scholars and art critics curatorial statements and a logbook related to the presentation of Children s Games at the Venice Biennale of 2022 **Immaterial** Sherri Irvin,2022 Contemporary art can seem chaotic sometimes it made of weird things sometimes it just comprises ideas Sherri Irvin shows that despite these unruly appearances making rules is a key part of what many contemporary artists do they use rules to create distinctive meanings and to provide powerful immersive experiences

Critique of Impure Reason Anne Munz,1999-02-28 Thanks to the enormous progress of neuroscience over the past few decades we can now monitor the passage of initial stimulations to certain points in the brain In spite of these findings however subjective consciousness still remains an unsolved mystery This volume exposes neuroscience and cognitive science to philosophical analysis and proposes that we think of our conscious states of mind as a composite phenomenon consisting of three layers neuronal events somatic markers and explicit consciousness While physics and chemistry can and have been successfully employed to describe the causal relation between the first two layers the further step to articulate consciousness is purely interpretative and points to the preponderant importance of language Language is essential for the transformation of inchoate not very informative somatic markers and mere moods into full consciousness and appraised emotion Munz uses literary examples to shift our understanding of the mind away from computational models and to show how eloquence about our states of mind is manufactured rather than caused He firmly rejects the efforts of both Freud and non Freudian psychologists to find a scientific explanation for such manufacture and to make a science out of the eloquence of folk psychology Instead he argues that the many ways eloquence is being manufactured to transform somatic markers into conscious states of mind are best accounted for in terms of Wittgenstein s conception of language games This volume challenges most current thinking about consciousness and mind and will appeal to philosophers psychologists neuroscientists and linguists

Digital Capitalism and New Institutionalism Daniil Frolov, 2023-12-19 Modern institutional economics was created to study the institutions of pre digital economies and is based on reductionist approaches But digital capitalism is producing institutions of unprecedented complexity This book argues therefore that not only the economic institutions themselves but also the theoretical foundations for studying those institutions must now be adapted to digital capitalism The book focuses on the institutional complexity of digital capitalism developing an interdisciplinary framework which brings together cutting edge theoretical approaches from philosophy first of all object oriented ontology sociology especially actor network theory evolutionary biology and cognitive science In particular the book outlines a new approach to the study of institutional evolution based on extended evolutionary synthesis a new paradigm in evolutionary biology which is now replacing neo Darwinism The book develops an enactivist notion of extended cognition and cognitive institutions rejecting the individualistic and mechanistic understanding of economic rationality in digital environments The author experiments with new philosophical approaches to investigate institutional complexity for example the ideas of the flat ontology and the assemblage theory The flat ontology approach is applied to the study of human robot institutions as well as to thinking about post anthropocentric institutional design Assemblage thinking allows for a new much less idealistic look at blockchain and smart cities Blockchain as digital institutional technology is considered in the book not from the viewpoint of minimizing transaction costs as is customary in the modern institutional economics but by using the theory of transaction value which focuses on improving the quality of digital transactions The book includes a wide range of examples ranging from metaverses cryptocurrencies and big data to robot rules smart contracts and machine learning algorithms Written for researchers in institutional economics and other social sciences this interdisciplinary book is essential reading for anyone interested in the interplay of institutional and digital change
