[Architects' Guide to Fee](#)

Bidding M. Paul Nicholson, 2005-10-05 Fee bidding still generates emotive reactions from within many sections of the architectural profession. Fee bidding is not taught in most schools of architecture so practitioners generally rely on hunches and guesswork. It is these wild card guesses which exacerbate the poor levels of income for which the architectural profession is renowned. This book introduces practising architects, architectural managers and senior students to the philosophy and practice of analytical estimating for fees. By means of a detailed case study it illustrates the many problems which may be encountered in the calculation of fees for professional services. It gives a step by step guide through the complexities of fee bidding and acts as a source of reference to successful bidding. A detailed discussion of the philosophy of design management and architectural management is developed as a backdrop to the preparation of a bid. It leads the reader through the mysteries of converting the calculation of a bid into a serious tender. This unique text is an essential guide for all practitioners particularly those at the commencement of their careers and Part 3 students. Indeed it will be of importance to all constructional professionals who operate within a highly competitive market. Management, Quality and Economics in Building A. Bezelga, P.S. Brandon, 2006-03-09 First published in 1991 Routledge is an imprint of Taylor Francis an informa company *Altering Houses and Small Scale Residential Developments* Ann Bridger, Colin Bridger, 2012-10-02 *Altering Houses and Small scale Residential Development* is a practical guide for home owners and those undertaking residential building projects It is also useful for students and emerging professionals concerned with the built environment especially small scale development procedures Undertaking house alterations can be daunting not least because considerations of cost design and method can simultaneously demand urgent and careful attention In addition there are regulations and the law to be satisfied contracts to be entered into and a host of potential problems concerned with the form and condition of the building itself It is a rare building which is not defective in some way but putting things right can be very satisfying The Bridgers book assumes that many home owners now wish to understand more clearly what goes on when they commission contractors and consultants to convert and adapt their homes Or course there are also people who intend to manage a project themselves while others may undertake work on a DIY basis and the secret then is getting the right kind of help This book will be invaluable in either situation because it explains how to perform certain functions yourself yet clarifies the roles and responsibilities of the professionals who may be needed to help with the processes of buying altering and selling a house The economic factors in development are not overlooked since for people who wish to develop in order to sell or let property market conditions will be paramount as will the forecasting and control of costs This book provides practical guidance on these matters it avoids theory but does suggest further reading It is also highly illustrated with over 100 illustrations clarifying parts of the text The main theme of this book is altering houses but in practice the differences between some alterations schemes and building a new house can be relatively small As a result much of the material will be useful for those who wish to acquire a plot of land and undertake a modest residential development Altering or building houses and selling them can be a complex business covering a wide range of interrelated factors This book will make these processes easier
