Physics of the Galaxy and Interstellar Matter Helmut Scheffler, Hans Elsässer, 2012-12-06 The present book is a translation of the original German edition published in 1982 with some minor corrections and improvements The guide to supplementary and advanced literature given in the Appendix however has been brought up to date This book is addressed primarily to students taking astronomy as a principal or subsidiary subject and to scientists of related fields but amateur astronomers should also be able to profit from it For most chapters an elementary knowledge of mathematics and physics will be sufficient however Chaps 5 and 6 impose somewhat greater requirements In addition the reader should already be acquainted with the basic concepts of stellar physics as treated in introductory books including the spectral types the system of stellar magnitudes and colours absolute magnitudes and luminosities the Hertzsprung Russell diagram and its interpretation A modern textbook should use SI units On the other hand the use of the cgs system is still the prevailing custom in astrophysics together with the special units of astronomy length is quoted in parsecs pc mass in solar

masses M_0 and time in years. We have therefore compromised and employed both cgs and SI units in this book whichever was the appropriate choice in each instance. A table for conversion of cgs units into SI units and vice versa is given in the Appendix.

Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world. It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970. Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics. Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months. This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user. Volume 20 contains literature published in 1977 and received before February 20 1978. Some older literature which was received late and which is not recorded in earlier volumes is also included. We acknowledge with thanks contributions to this volume by Dr J Bouška Prague who surveyed journals and publications in Czech and supplied us with abstracts in English and by Prof P Brosche Bonn who supplied us with literature concerning some border fields of astronomy.

Transactions of the International Astronomical Union E.A. Müller, A. Jappel, 2012-12-06.

The Reports on Astronomy 1976 published as Transactions XVIIA in 3 volumes before the XVIth General Assembly are a synopsis of the work done in astronomy from 1973 to 1975. The volume Highlights of Astronomy as presented at the XVIth General Assembly of the IAU in Grenoble 1976 includes some selected scientific topics and will appear in the first half of 1977.
