**Kalman Filtering and Neural Networks** Simon Haykin, 2004-03-24 State of the art coverage of Kalman filter methods for the design of neural networks This self contained book consists of seven chapters by expert contributors that discuss Kalman filtering as applied to the training and use of neural networks Although the traditional approach to the subject is almost always linear this book recognizes and deals with the fact that real problems are most often nonlinear The first chapter offers an introductory treatment of Kalman filters with an emphasis on basic Kalman filter theory Rauch Tung Striebel smoother and the extended Kalman filter Other chapters cover An algorithm for the training of feedforward and recurrent multilayered perceptrons based on the decoupled extended Kalman filter DEKF Applications of the DEKF learning algorithm to the study of image sequences and the dynamic reconstruction of chaotic processes The dual estimation problem Stochastic nonlinear dynamics the expectation maximization EM algorithm and the extended Kalman smoothing EKS algorithm The unscented Kalman filter Each chapter with the exception of the introduction includes illustrative applications of the learning algorithms described here some of which involve the use of simulated and real life data Kalman Filtering and Neural Networks serves as an expert resource for researchers in neural networks and nonlinear dynamical systems

**Discrete-Time High Order Neural Control** Edgar N. Sanchez, Alma Y. Alanís, Alexander G. Loukianov, 2008-06-24 Neural networks have become a well established methodology as exemplified by their applications to identification and control of general nonlinear and complex systems the use of high order neural networks for modeling and learning has recently increased Using neural networks control algorithms can be developed to be robust to uncertainties and modeling errors The most used NN structures are Feedforward networks and Recurrent networks The latter type offers a better suited tool to model and control of nonlinear systems There exist different training algorithms for neural networks which however normally encounter some technical problems such as local minima slow learning and high sensitivity to initial conditions among others As a viable alternative new training algorithms for example those based on Kalman filtering have been proposed There already exists publications about trajectory tracking using neural networks however most of those works were developed for continuous time systems On the other hand while extensive literature is available for linear discrete time control system nonlinear discrete time control design techniques have not been discussed to the same degree Besides discrete time neural networks are better suited for real time implementations

Technical and Technological Solutions Towards a Sustainable Society and Circular Economy Jamal Mabrouki,Azrou Mourade,2024-05-13 Resource depletion and ecological risks are more than ever at the heart of societal and economic debates In the 1970s the developed countries saw the Fordist growth regime crumble in parallel with the growing awareness of the ecological issue Since the first industrial revolutions technological dynamics have been the cause of many environmental problems and there is a consensus on the diagnosis Integrated technologies reduce resource use and or pollution at source by using cleaner production methods This generally leads to a reduction in the by products energy inputs and resources used by companies to produce goods Integrated production

technologies reduce negative environmental impacts at source by substituting or modifying cleaner technologies. Examples of integrated or cleaner production technologies are the recirculation of materials, the use of environmentally friendly materials such as the substitution of water for organic solvents etc. However, the implementation of integrated production technologies is often hampered by obstacles related to cost, coordination and skill inertia problems, and to the productive organisation of companies. In addition to the high investment costs of new integrated technologies, additional barriers may emerge depending on the nature of the environmental problem and the type of environmental regulation in question.

Focusing on the use of nonlinear control techniques, this book discusses the main features and advantages of the DFIG. It describes key theoretical fundamentals and the DFIG mathematical model. It develops controllers using inverse optimal control, sliding modes and neural networks. It devises an improvement to add robustness in the presence of parametric variations. It details the results of real-time implementations. All controllers presented in the book are tested in a laboratory prototype. Comparisons between the controllers are made by analyzing statistical measures applied to the control objectives.
