Shakespeare's Theater of Nature Aaron Kitch, 2025-03-06 Shakespeare's Theater of Nature argues that Shakespeare combined art and nature in new ways while experimenting with relations between words images and objects as sources of knowledge and pleasure Shakespeare's re-centering of nature as a source of theatrical representation in a range of plays follows debates in natural philosophy and theology about how to understand divinity in and through the order of nature ordo creationis Early chapters analyze early modern reframing of nature by printed books of botany cosmology and history as well Tudor interludes that center nature as a subject while later chapters offer readings of eight plays by Shakespeare that draw on classical medieval and early modern debates in natural philosophy and theology to create new modes of dramatic mimesis

Concept Progress Leo Indman, 2017-04-22 Concept Progress is a fusion of science fiction and philosophy It is a metaphysics that centers on progress being a driving force in human evolution This recurring viewpoint has previously stirred much debate However as we escalate through the 21st century the evidence is plentiful Concept Progress offers a fresh perspective into the topic citing humanity's ongoing accomplishments as a convincing piece of that evidence In the book we celebrate ourselves for our achievements challenge our perceived limits and conclude that progress will eventually produce the most evolved life form In so doing we look back to the beginning of time and circle forward to a time that is farther away than the current age of the universe While the tone of the book's body resembles that of a philosophical prose with each chapter the reader realizes more and more that the narrative is actually one of science fiction The intent of the book's structure and approach is manifold First it is safe to say that any literature that points to the future is already by definition a work of fiction no matter how serious it tries to sound Imagining future technologies foreseeing the next stages of human evolution and exploring the realm of the highest dimension surely makes it a science fiction Second the book is a collection of concepts abstract notions of the mind that reflect our grasp on certain aspects of reality It is also a play on those concepts exposing how our progressive understanding of these notions can gradually be transcended Each chapter starts with a sketch of a particular concept whose humanistic yet quantum mechanical context lets us identify with it and be mystified by it From the concepts of sound and light to the concepts of consciousness and coexistence each concept tale depicts a personal expression of our mutual worldview Third each one of the ten chapters concludes with a short sci fi story These stories project the theme further and subtly point to each other As we connect the dots from one story to another the outline reveals a world that makes us wonder whether we are headed toward its future or whether we will bypass it as an alternate universe In one story we meet the inventor of mind reading technology while in another story we meet an artificial life form that will be made possible by this technology Yet another story is about the time traveling mind of an astrophysicist whose life's work has impacts on whole timelines as revealed by a

different story In the end it all comes together with the final piece of the puzzle completing not only the short story series but also the novel as a whole Each three part chapter is a triad with a distinct purpose in mind We begin the journey with our own curiosity This basic emotion allows us to open the door to that which we are so curiously seeking Essentially that covers everything In questioning the entirety of existence we commence with the premise that it is the element of life that sends us on a quest for meaning So we review the trend of life s evolution on Earth from its roots to the present day and follow this trend into the distant future The process of evolutionary development leads us to a recipe for one s own personal progress which is comprised of physical mental and spiritual ingredients It soon becomes clear that a species can change only insofar as its individual members embrace this change And we realize that our choice in the matter has impacts not only on our own future but also on the future of everyone who shares our timeline In some ways Concept Progress is a modern commentary of Charles Darwin s revolutionary theory of evolution In other ways it is an encouraging observation of our humble human existence As we widen the time scale and follow an evolutionary trend from biological social and cosmic angles the concepts of evolution and progress slowly but surely become synonymous

Memoirs of the Twentieth Century

Ugo Spirito,2021-10-25 Ugo Spirito s Memoirs of the Twentieth Century is the intellectual autobiography of one of the most

original and anticonformist contemporary Italian philosophers In it Spirito makes an evaluation of his long career spanning from the decade of the 20 s to that of the 70 s of the twentieth century as a thinker who was never satisfied with any theoretical or philosophical system while constantly aiming at finding a definitive truth the incontrovertible or absolute The various stages of his search deal with different philosophical and scientific systems from positivism to actual idealism from problematicism to omnicentrism from scientism to neoproblematicism revealing at the same time an inherent antinomic procedure that does not permit him to take any truth for granted At the end of his life Spirito realized that he could only be sure of his present state of unawareness thus challenging the validity of his lifelong investigative activity Man cannot know himself Spirito wrote Confronted with the manifestations of life and universe he could not help but feel a sense of surprise and astonishment Throughout his life he was only a spectator of his destiny not the conscious creator of it as he believed in the early stage of his career Consequently he reached a position of negating any value system bordering on skepticism and nihilism Within this context he offered a post modern interpretation of life This interpretation was also Spirito s conclusion and as such implied a rethinking about other faiths both political and ideological that for more than fifty years would develop parallel to philosophical faith Consequently he revisited some of the most important philosophical and political personalities who interpreted or materialized those faiths from Benedetto Croce to Gentile from Benito Mussolini to Giovanni Bottai from Togliatti to Pope Paul VI Spirito was not a thinker who remained secluded within the ivory tower of pure investigation but in an effort to modify society according to principle of the identification of philosophy with life he tried to act upon it by following thoughts with action Memoirs of the Twentieth Century is divided in two parts one purely autobiographical and theoretical and the other more historical where Spirito narrates his relationship with the above mentioned personalities as a way of testing the validity of his beliefs Indeed one can perceive his moment of adherence to each of the different approaches expounded only to subsequently detach himself from them For the English speaking reader the second part will appear more interesting and poignant since Spirito s involvement with history foretells the intellectual fate of a nation Memoirs of the Twentieth Century is a reflection on life in which personal history serves as a vehicle for judgment upon an entire century
