Infrared and Submillimeter Astronomy G.G. Fazio, 2012-12-06 The Symposium on Infrared and Submillimeter Astronomy was held in Philadelphia Pennsylvania U S A on June 8 10 1976 as an activity associated with the Nineteenth Plenary Meeting of the Committee on Space Research CaSPAR The Symposium was sponsored jointly by CaSPAR the

International Astronomical Union IAU and the International Union of Radio Science CURSI caSPAR is an interdisciplinary scientific organization established by the International Council of Scientific Unions in 1958 to in the words of its charter provide the world scientific community with the means whereby it may exploit the possibilities of satellites and space probes of all kinds for scientific purposes and exchange the resulting data on a co operative basis The purpose of this particular CaSPAR Sympo sium was to present new results in infrared and submillimeter astronomy obtained by observations on aircraft high altitude balloons rockets satellites and space probes Topics dis cussed included the Sun the solar system galactic and extra galactic objects as well as the cosmic background radiation Instrumentation for observations in infrared and submillimeter astronomy was also discussed with particular emphasis on future programs from space observatories

Maser Sources in Astrophysics Malcolm Gray,2012-04-26 Written for postgraduates and researchers this is an up to date survey of astrophysical maser sources and their use as astronomical tools *Nuclear Science Abstracts* ,1975 **Physics of the Galaxy and Interstellar Matter** Helmut Scheffler,Hans Elsässer,2012-12-06 The present book is a translation of the original German edition published in 1982 with some minor corrections and improvements The guide to sup plementary and advanced literature given in the Appendix however has been brought up to date This book is addressed primarily to students taking astronomy as a prin cipal or subsidiary subject and to scientists of related fields but amateur as tronomers should also be able to profit from it For most chapters an elementary knowledge of mathematics and physics will be sufficient however Chaps 5 and 6 impose somewhat greater requirements In addition the reader should already be acquainted with the basic concepts of stellar physics as treated in introduc tory books including the spectral types the system of stellar magnitudes and colours absolute magnitudes and luminosities the Hertzsprung Russell dia gram and its interpretation A modem textbook should use SI units On the other hand the use of the cgs system is still the prevailing custom in astrophysics together with the special units of astronomy length is quoted in parsecs pc mass in solar masses M_{\odot} and time in years a We have therefore compromised and employed both cgs and SI units in this book whichever was the appropriate choice in each instance A table for conversion of cgs units into SI units and vice versa is given in the Appendix *Reprints - National Radio Astronomy Observatory, Green Bank, W. Va* National Radio Astronomy Observatory (U.S.),1975 Reports on Astronomy Edith Muller,1979-05-30 *Dust in the Universe* M. E. Bailey,D. A. Williams,1988-12-15 *Giant Molecular Clouds in the Galaxy* P. M. Solomon,M. G. Edmunds,2013-10-22 Giant Molecular Clouds in the Galaxy Third Gregynog Astrophysics Workshop covers the proceedings of the 1977 Third Gregynog Astrophysics Workshop on Giant Molecular Clouds GMC held at the University of Wales This book is organized into 11 parts encompassing 33 chapters After a brief introduction to the significant features of GMC this book goes on examining radio millimeter and galactic center observations of GMC along with their infrared properties and kinematics Other parts deal with the water sources in GMC time variation in interstellar water masers and the relation of HII regions to molecular clouds The remaining parts discuss the evolution of interstellar molecular

clouds and the role of magnetic fields in the collapse of protostellar gas clouds These parts also cover the chemistry of interstellar molecules containing nitrogen and the search for other planetary systems This book will prove useful to cloud scientists physicists astronomers and researchers

Infrared Astronomy G. Setti, G.G. Fazio, 2012-12-06 This volume contains a series of lectures presented at the 4th Course of the International School of Astrophysics held in Erice Sicily from July 9 July 20 1977 at the E Majorana Centre for Scientific Culture The course was fully supported by a grant from the NATO Advanced Study Institute Programme It was attended by 82 participants from 15 countries Even though the infrared portion of the electromagnetic spectrum covers an extensive interval from the red region of the optical spectrum 10 000 Å to the microwave radio region 1 mm its role in astronomy has been minimal until the last two decades Until very recently the only objects observed were the sun the moon and the planets A primary reason for this late development was the lack of sensitive detectors and the necessary cryogenic technology that must accompany their use Recent progress in this technology has been paralleled by an ever increasing interest of astronomers in infrared observations leading to a number of extremely important results in different branches of astronomy This becomes evident when one realizes that in many astrophysical conditions most of the energy is found to be channeled into the infrared portion of the electromagnetic spectrum Stars were detected that yield most of their radiation in the infrared these objects present a new view of stellar evolution both in the birth and death stages
