system and describes in detail the environmental regulation of brain genes that encode molecular symbols His coherent vision of the vast biological information system provides insight into questions of how the mind is related to the brain what constitutes the substance of thought or the physical bases of memory how experience changes mind function or environmental information is converted into neural language and what biochemical abnormalities lead to Alzheimer s disease Parkinson s disease and schizophrenia Information in the Brain identifies common concepts and themes in widely diverse fields revealing the extraordinary scope of modern neuroscience and makes central issues in the brain sciences accessible to a variety of readers Black s description of the critical role that gene structure plays in ongoing brain and mind function will appeal to molecular biologists Protein chemists will understand how molecular structure is translated into behavior and mentation Neuroscientists will gain an explicit understanding of the central questions in psychology In turn psychologists will find new ideas concerning cellular and molecular bases of brain function and clinical neurologists and psychiatrists will discover new formulations of the pathogenesis of disease at genomic molecular and systems levels Ira B Black is Professor and Chairman Department of Neuroscience and Cell Biology the Robert Wood Johnson Medical School UMDNJ
