*Secure Sensor Cloud* Vimal Kumar, Amartya Sen, Sanjay Madria, 2022-05-31 The sensor cloud is a new model of computing paradigm for Wireless Sensor Networks WSNs which facilitates resource sharing and provides a platform to integrate different sensor networks where multiple users can build their own sensing applications at the same time It enables a multi user on demand sensory system where computing sensing and wireless network resources are shared among applications Therefore it has inherent challenges for providing security and privacy across the sensor cloud infrastructure With the integration of WSNs with different ownerships and users running a variety of applications including their own code there is a need for a risk assessment mechanism to estimate the likelihood and impact of attacks on the life of the network The data being generated by the wireless sensors in a sensor cloud need to be protected against adversaries which may be outsiders as well as insiders Similarly the code disseminated to the sensors within the sensor cloud needs to be protected against inside and outside adversaries Moreover since the wireless sensors cannot support complex and energy intensive measures the lightweight schemes for integrity security and privacy of the data have to be redesigned The book starts with the motivation and architecture discussion of a sensor cloud Due to the integration of multiple WSNs running user owned applications and code the possibility of attacks is more likely Thus next we discuss a risk assessment mechanism to estimate the likelihood and impact of attacks on these WSNs in a sensor cloud using a framework that allows the security administrator to better understand the threats present and take necessary actions Then we discuss integrity and privacy preserving data aggregation in a sensor cloud as it becomes harder to protect data in this environment Integrity of data can be compromised as it becomes easier for an attacker to inject false data in a sensor cloud and due to hop by hop nature privacy of data could be leaked as well Next the book discusses a fine grained access control scheme which works on the secure aggregated data in a sensor cloud This scheme uses Attribute Based Encryption ABE to achieve the objective Furthermore to securely and efficiently disseminate application code in sensor cloud we present a secure code dissemination algorithm which first reduces the amount of code to be transmitted from the base station to the sensor nodes It then uses Symmetric Proxy Re encryption along with Bloom filters and Hash based Message Authentication

Code HMACs to protect the code against eavesdropping and false code injection attacks      Social Studies for the Twenty-first Century Jack Zevin, 1999-08-01 Revised and updated second edition offers an overall framework to guide teaching in setting objectives devising lessons and choosing classroom strategies as well as assistance in constructing tests
