Hierarchical and Geometrical Methods in Scientific Visualization Gerald Farin, Bernd Hamann, Hans Hagen, 2012-12-06 The nature of the physical Universe has been increasingly better understood in recent years and cosmological concepts have undergone a rapid evolution see e g 11 2 or 5 Although there are alternate theories it is generally believed that the large scale relationships and homogeneities that we see can only be explained by having the universe expand suddenly in a very early stationary period Subsequent evolution of the Universe is described by the Hubble expansion the observation that the galaxies are ying away from each other We can attribute different rates of this expansion to domination of different cosmological processes beginning with radiation evolving to matter domination and relatively recently to vacuum domination

the Cosmological Constant term 4 We assume throughout that we will be relying as much as possible on observational data with simulations used only for limited purposes e.g. the appearance of the Milky Way from nearby intergalactic viewpoints The visualization of large scale astronomical data sets using xed non interactive animations has a long history Several books and films exist ranging from Cosmic View The Universe in Forty Jumps 3 by Kees Boeke to Powers of 10 6 13 by Charles and Ray Eames and the recent Imax film Cosmic Voyage 15 We have added our own contribution 9 Cosmic Clock which is an animation based entirely on the concepts and implementation described in this paper

Deformable Avatars Nadia Magnenat-Thalmann, Daniel Thalmann, 2001-08-31 Deformable avatars are virtual humans that deform themselves during motion This implies facial deformations body deformations at joints and global deformations Simulating deformable avatars ensures a more realistic simulation of virtual humans The research requires models for capturing of geometry and kinematic data the synthesis of the realistic human shape and motion the parametrisation and motion retargeting and several appropriate deformation models Once a deformable avatar has been created and animated the researcher must model high level behavior and introduce agent technology The book can be divided into 5 subtopics 1 Motion capture and 3D reconstruction 2 Parametric motion and retargeting 3 Muscles and deformation models 4 Facial animation and communication 5 High level behaviors and autonomous agents Most of the papers were presented during the IFIP workshop DEFORM 2000 that was held at the University of Geneva in December 2000 followed by A V AT ARS 2000 held at EPFL Lausanne The two workshops were sponsored by the Trois me Cycle Romand d Informatique and allowed participants to discuss the state of research in these important areas x Preface We would like to thank IFIP for its support and Yana Lambert from Kluwer Academic Publishers for her advice Finally we are very grateful to Zerrin Celebi who has prepared the edited version of this book and Dr Laurent Moccozet for his collaboration
