Grassland Dynamics Long Term Ecological Research In Tallgrass Prairie:

Grassland Dynamics Alan K. Knapp, John M. Briggs, David C. Hartnett, 1998 This is the first volume in the Long Term Ecological Research LTER Network Series Established in 1980 the LTER program is exploring a wide variety of biomes characteristic of the United States and developing a baseline for ecosystem dynamics over long time periods and broad spatial scales The volumes in this series will include both comprehensive reviews of research from particular sites and topical overviews which use data from many sites to examine important questions in ecology This volume which focuses on the Konza Prairie in northeastern Kansas is a synthesis of over 15 years of research in pristine tallgrass prairie It gives a comprehensive site description and summarizes the key long term studies that form the basis for the Konza Prairie Long Term Ecological Research Program It then presents a synthesis of the many research areas involved and develops a foundation for future ecological studies in tallgrass prairie With over 150 figures and tables chapters that encompass microbial through landscape scales and an emphasis on lessons learned from long term studies this volume provides a unique and comprehensive perspective on the structural and functional ecology of the grassland ecosystem that once covered most of central North America

Long-term Ecological Research Michael R. Willig, Lawrence R. Walker, 2016 This book explores the broader impacts arising from collaborative and multidisciplinary participation in the Long Term Ecological LTER Program with regard to personal perspectives attitudes and practices A series of retrospective essays addresses probing questions to uncover the extent to which participation has affected the ways that scientists conduct research educate students or provide outreach Concluding chapters integrate and synthesize the findings from the essays from historical behavioral sociological perspectives

Climate Variability and Ecosystem Response at Long-Term Ecological Research Sites David Greenland, Douglas G. Goodin, Raymond C. Smith, 2003-10-09 This volume in the Long Term Ecological Research Network Series would present the work that has been done and the understanding and database that have been developed by work on climate change done at all the LTER sites Global climate change is a central issue facing the world which is being worked on by a very large number of scientists across a wide range of fields The LTER sites hold some of the best available data measuring long term impacts and changes in the environment and the research done at these sites has not previously been made widely available to the broader climate change research community This book should appeal reasonably widely outside the ecological community and because it pulls together information from all 20 research sites it should capture the interest of virtually the entire LTER research community

Integrating Landscape Ecology Into Natural Resource Management Jianguo Liu, William W. Taylor, 2002-08 The rapidly increasing global population has dramatically increased the demands for natural resources and has caused significant changes in quantity and quality of natural resources To achieve sustainable resource management it is essential to obtain insightful guidance from emerging disciplines such as landscape ecology This text addresses the links between landscape ecology and natural resource

management These links are discussed in the context of various landscape types a diverse set of resources and a wide range of management issues A large number of landscape ecology concepts principles and methods are introduced Critical reviews of past management practices and a number of case studies are presented This text provides many guidelines for managing natural resources from a landscape perspective and offers useful suggestions for landscape ecologists to carry out research relevant to natural resource management In addition it will be an ideal supplemental text for graduate and advanced undergraduate ecology courses

Principles and Standards for Measuring Primary Production
 Timothy J. Fahey, Alan K. Knapp, 2007-05-14 Principles and Standards for Measuring Net Primary Production in Long Term Ecological Studies is the first book to establish a standardized method for measuring net primary productivity NPP in ecological research Primary productivity is the rate at which energy is stored in the organic matter of plants per unit area of the earth's surface As the beginning stage of the carbon cycle our ability to accurately measure NPP is essential to any ecological analysis as well as agronomy forestry fisheries limnology and oceanography In fact NPP measurements are fundamental to ecosystem studies at thousands of sites around the world All 26 LTER sites will be expected to collect and report data using these new standards but the standards should reach well beyond LTER sites Identified standards for NPP measurements will allow researchers from diverse biomes to authoritatively compare measurements among their sites Comparable measurements will build a foundation for a broad scale understanding of the environmental biological and nutrition controls on NPP The book includes chapters for each of the critical biome types including special techniques that work best in each environment For example there are chapters that discuss grassland ecosystems urban ecosystems marine pelagic ecosystems forest ecosystems and salt marsh ecosystems among others

Global Vegetation Jörg S. Pfadenhauer, Frank A. Klötzli, 2020-09-09 This up to date textbook of global vegetation ecology which comprises the current state of knowledge is long overdue and much needed It is a translation of the textbook Vegetation der Erde Springer Spektrum Heidelberg A short introductory chapter deals with the fundamentals of vegetation ecology that are of importance

for the delimitation and characterization of the global vegetation presented in this book chorology evolution of plants physiognomic and structural characteristics phytodiversity and the human impact on it as well as general terminology concerning both plant growth forms and on vegetation structure types In the following chapters the zonal and azonal vegetation from the tropics to the polar regions including high mountains is described and discussed The main focus is on the characterization of interactions between the spatial location of plants and plant communities on the one hand and site conditions historic and genetic processes spatial and temporal patterns ecophysiology and anthropogenic influences on the other hand Additional information on specific topics is provided in 51 boxes

Agrarian Landscapes in Transition Charles Redman, David R. Foster, 2008-07-18 Agrarian Landscapes in Transition researches human interaction with the earth With hundreds of acres of agricultural land going out of production every day the introduction spread and abandonment of agriculture represents the most pervasive alteration of the Earth's environment for several thousand years What happens when humans impose their spatial and temporal signatures on ecological regimes and how does this manipulation affect the earth and nature's desire for equilibrium Studies were conducted at six Long Term Ecological Research sites within the US including New England the Appalachian Mountains Colorado Michigan Kansas and Arizona While each site has its own unique agricultural history patterns emerge that help make sense of how our actions have affected the earth and how the earth pushes back The book addresses how human activities influence the spatial and temporal structures of agrarian landscapes and how this varies over time and across biogeographic regions It also looks at the ecological and environmental consequences of the resulting structural changes the human responses to these changes and how these responses drive further changes in agrarian landscapes The time frames studied include the ecology of the earth before human interaction pre European human interaction during the rise and fall of agricultural land use and finally the biological and cultural response to the abandonment of farming due to complete abandonment or a land use change such as urbanization

The Potential of U.S. Grazing Lands to Sequester Carbon and Mitigate the Greenhouse Effect Ronald F. Follett, John M. Kimble, 2000-09-15 Grazing lands represent the largest and most diverse land resource taking up over half the earth's land surface The large area grazing land occupies its diversity of climates and soils and the potential to improve its use and productivity all contribute to its importance for sequestering C and mitigating the greenhouse effect and other condition

America's Natural Places: The Midwest Jason Ney, Terri Nichols, 2009-11-25 From Iowa's Decorah Ice Cave to the Kitty Todd Nature Preserve in Ohio this volume provides a snapshot of the most spectacular and important natural places in the Midwestern United States America's Natural Places The Midwest examines over 50 of the most spectacular and important areas of this region with each entry describing the importance of the area the flora and fauna that it supports threats to the survival of the region and what is being done to protect it Organized by state within the volume this work informs readers about the wide variety of natural areas across the Midwest and identifies places near them that demonstrate

Phenology: An Integrative Environmental Science Mark D.

Schwartz, 2011-04-28 Phenology is the study of plant and animal life cycle events which are triggered by environmental changes especially temperature. Wide ranges of phenomena are included from first openings of leaf and flower buds to insect hatchings and return of birds. Each one gives a ready measure of the environment as viewed by the associated organism. Thus phenological events are ideal indicators of the impact of local and global changes in weather and climate on the earth's biosphere. Assessing our changing world is a complex task that requires close cooperation from experts in biology, climatology, ecology, geography, oceanography, remote sensing and other areas. This book is a synthesis of current phenological knowledge designed as a primer on the field for global change and general scientists, students and interested members of the public. With contributions from a diverse group of over fifty phenological experts covering data collection, current research methods and applications, it demonstrates the accomplishments and potential of phenology as an integrative environmental science.

Ecology of North America Brian R. Chapman, Eric G. Bolen, 2015-04-09 North America contains an incredibly diverse array of natural environments, each supporting unique systems of plant and animal life. These systems, the largest of which are biomes, form intricate webs of life that have taken millennia to evolve. This richly illustrated book introduces readers to this extraordinary array of natural communities and their subtle biological and geological interactions. Completely revised and updated throughout, the second edition of this successful text takes a qualitative, intuitive approach to the subject, beginning with an overview of essential ecological terms and concepts such as competitive exclusion, taxa, niches and succession. It then goes on to describe the major biomes and communities that characterize the rich biota of the continent, starting with the Tundra and continuing with Boreal Forest, Deciduous Forest, Grasslands, Deserts, Montane Forests and Temperature Rain Forest among others. Coastal environments including the Laguna Madre, seagrasses, Chesapeake Bay and barrier islands appear in a new chapter. Additionally, the book covers many unique features such as pitcher plant bogs, muskeg, the polar icecap, the cloud forests of Mexico and the LaBrea tar pits. InfoBoxes have been added; these include biographies of historical figures who provided significant contributions to the development of ecology, unique circumstances such as frogs and insects that survive freezing and conservation issues such as those concerning puffins and island foxes. Throughout the text, ecological concepts are worked into the text; these include biogeography, competitive exclusion, succession, soil formation and the mechanics of natural selection. *Ecology of North America 2e* is an ideal first text for students interested in natural resources, environmental science and biology, and it is a useful and attractive addition to the library of anyone interested in understanding and protecting the natural environment.

Changing Precipitation Regimes and Terrestrial Ecosystems

Jake F. Weltzin, Guy Randall McPherson, 2003-01-01 By the beginning of the twenty-first century, few people could deny the reality of global change. But while most alarm has been over increasing temperatures, other changes are occurring in precipitation patterns, variations that may be due in part to global warming but also to factors such as changes in

atmospheric circulation and land surfaces This volume provides a central source of information about this newly emerging area of global change research It presents ongoing investigations into the responses of plant communities and ecosystems to the experimental manipulation of precipitation in a variety of field settings particularly in the western and central United States where precipitation is already scarce or variable By exploring methods that can be used to predict responses of ecosystems to changes in precipitation regimes it demonstrates new approaches to global change research and highlights the importance of precipitation regimes in structuring ecosystems The contributors first document the importance of precipitation soil characteristics and soil moisture to plant life They then focus on the roles of precipitation amount seasonality and frequency in shaping varied terrestrial ecosystems desert sagebrush steppe oak savanna tall and mixed grass prairie and eastern deciduous forest These case studies illustrate many complex tightly woven interactive relationships among precipitation soils and plants relationships that will dictate the responses of ecosystems to changes in precipitation regimes The approaches utilized in these chapters include spatial comparisons of vegetation structure and function across different ecosystems analyses of changes in plant architecture and physiology in response to temporal variation in precipitation experiments to manipulate water availability and modeling approaches that characterize the relationships between climate variables and vegetation types All seek to assess vegetation responses to major shifts in climate that appear to be occurring at present and may become the norm in the future As the first volume to discuss and document current and cutting edge concepts and approaches to research into changing precipitation regimes and terrestrial ecosystems this book shows the importance of developing reliable predictions of the precipitation changes that may occur with global warming These studies clearly demonstrate that patterns of environmental variation and the nature of vegetation responses are complex phenomena that are only beginning to be understood and that these experimental approaches are critical for our understanding of future change Agricultural Research in Kansas Kansas Agricultural Experiment Station, 1998

Structure and Function of a Chihuahuan Desert Ecosystem Kris M. Havstad, Laura F. Huenneke, William H. Schlesinger, 2006-07-20 The Jornada Basin LTER is located in the Chihuahuan Desert the largest in North America This region of south central New Mexico has a history of nearly 100 years as the basis for scientific research This work gives a thorough encompassing review of the tremendous array of observations resulting from experiments conducted in this ecosystem Beginning with thorough descriptions of the most salient features of the region the book then reviews a wide range of archived and active data sets on a diversity of biotic and abiotic features It next presents a syntheses of important topics including livestock grazing and remediation efforts A concluding chapter provides a synthesis of the principles that have emerged from this body of work and how these relate to the broader fields of ecology and natural resource management It concludes with recommendations for future research directions The insightful views expressed in this volume should guide management of arid landscapes globally This is the sixth volume in the Long Term Ecological Network Series
