McMahon,Brian L. Finlayson,Christopher J. Gippel,Rory J. Nathan,2013-05-03 Since the publication of the first edition 1994 there have been rapid developments in the application of hydrology geomorphology and ecology to stream management In particular growth has occurred in the areas of stream rehabilitation and the evaluation of environmental flow needs The concept of stream health has been adopted as a way of assessing stream resources and setting management goals Stream Hydrology An Introduction for Ecologists Second Edition documents recent research and practice in these areas Chapters provide information on sampling field techniques stream analysis the hydrodynamics of moving water channel form sediment transport and commonly used statistical methods such as flow duration and flood frequency analysis Methods are presented from engineering hydrology fluvial geomorphology and hydraulics with examples of their biological implications This book demonstrates how these fields are linked and utilised in modern scientific river management Emphasis on applications from collecting and analysing field measurements to using data and tools in stream management Updated to include new sections on environmental flows rehabilitation measuring stream health and stream classification Critical reviews of the successes and failures of implementation Revised and updated windows based AQUAPAK software This book is essential reading for 2nd 3rd year undergraduates and postgraduates of hydrology stream ecology and fisheries science in Departments of Physical Geography Biology Environmental Science Landscape Ecology Environmental Engineering and Limnology It would be valuable reading for professionals working in stream ecology fisheries science and habitat management environmental consultants and engineers **Advances in Natural Hazards and Hydrological Risks: Meeting the Challenge** Francisco Fernandes,Ana Malheiro,Helder I. Chaminé,2020-01-02 This book gathers the proceedings of the 2nd International Workshop on Natural Hazards NATHAZ 19 held in Lajes do Pico Pico Island Azores in 2019 Natural hazards constitute the threat of a naturally occurring event having a negative effect on human beings These effects are often called natural disasters Among the natural hazards and potential disasters to be considered are earthquakes volcanic eruptions landslides subsidence floods droughts and coastal erosion In addition there are anthropogenic hazards that occur as a result of human interactions with the environment They include technological hazards which occur due to exposure to hazardous substances in the environment Grasping the behaviour of natural systems requires a comprehensive understanding of climatology geology and hydrology data and dynamics Thus it is important to conduct hazard and risk assessment studies for meaningful hazard mitigation Further the book demonstrates that an accurate understanding of natural systems and interactions between engineering and natural resources is of vital significance to the entire socio economic sector This volume offers an overview of natural hazards in model regions in Europe America and Atlantic islands Providing new insights on the characterisation assessment protection and modelling of geological hazards water systems urban areas and coastal zones it represents a

valuable resource for all researchers and practitioners in the fields of Geosciences Hydrology Water Resources Natural Hazards Environments and Engineering Main topics include 1 Natural Hazards and Disasters2 Sustainable Water Systems and Climate Change3 Technological Hazards and Engineering Design **Forests, Water and People in the Humid**

Tropics M. Bonell, L. A. Bruijnzeel, 2009-12-17 *Forests Water and People in the Humid Tropics* is a comprehensive review of the hydrological and physiological functioning of tropical rain forests the environmental impacts of their disturbance and conversion to other land uses and optimum strategies for managing them The book brings together leading specialists in such diverse fields as tropical anthropology and human geography environmental economics climatology and meteorology hydrology geomorphology plant and aquatic ecology forestry and conservation agronomy The editors have supplemented the individual contributions with invaluable overviews of the main sections and provide key pointers for future research Specialists will find authenticated detail in chapters written by experts on a whole range of people water land use issues managers and practitioners will learn more about the implications of ongoing and planned forest conversion while scientists and students will appreciate a unique review of the literature *Hydrogeology* Kevin M.
