Gervasi,Byeong-Ho Kang,2010-05-10 As future generation information technology FGIT becomes specialized and fragmented it is easy to lose sight that many topics in FGIT have common threads and because of this advances in one discipline may be transmitted to others Presentation of recent results obtained in different disciplines encourages this interchange for the advancement of FGIT as a whole Of particular interest are hybrid solutions that combine ideas taken from multiple disciplines in order to achieve something more significant than the sum of the individual parts Through such hybrid philosophy a new principle can be discovered which has the propensity to propagate throughout multifaceted disciplines FGIT 2009 was the first mega conference that attempted to follow the above idea of hybridization in FGIT in a form of multiple events related to particular disciplines of IT conducted by separate scientific committees but coordinated in order to expose the most important contributions It included the following international conferences Advanced Software Engineering and Its Applications ASEA Bio Science and Bio Technology BSBT Control and Automation CA Database Theory and Application DTA Disaster Recovery and Business Continuity DRBC published independently Future Generation Communication and Networking FGCN that was combined with Advanced Communication and Networking ACN Grid and Distributed Computing GDC Multimedia Computer Graphics and Broadcasting MulGraB Security Technology SecTech Signal Processing Image Processing

Browne,2012-12-06 Input Output in Parallel and Distributed Computer Systems has attracted increasing attention over the last few years as it has become apparent that input output performance rather than CPU performance may be the key limiting factor in the performance of future systems This I O bottleneck is caused by the increasing speed mismatch between

processing units and storage devices the use of multiple processors operating simultaneously in parallel and distributed systems and by the increasing I O demands of new classes of applications like multimedia It is also important to note that to varying degrees the I O bottleneck exists at multiple levels of the memory hierarchy All indications are that the I O bottleneck will be with us for some time to come and is likely to increase in importance

Input Output in Parallel and Distributed Computer Systems is based on papers presented at the 1994 and 1995 IOPADS workshops held in conjunction with the International Parallel Processing Symposium This book is divided into three parts Part I the Introduction contains four invited chapters which provide a tutorial survey of I O issues in parallel and distributed systems The chapters in Parts II and III contain selected research papers from the 1994 and 1995 IOPADS workshops many of these papers have been substantially revised and updated for inclusion in this volume Part II collects the papers from both years which deal with various aspects of system software and Part III addresses architectural issues

Input Output in Parallel and Distributed Computer Systems is suitable as a secondary text for graduate level courses in computer architecture software engineering and multimedia systems and as a reference for researchers and practitioners in industry
