The hallmark of neglect is the failure to attend to the contralesional hemispace However several studies have recently highlighted that additional deficits not

attributable to a spatial bias are associated to the impaired contralesional hemispace processing Moreover manifestations of neglect tend to be particularly heterogeneous and often dissociate according to the spatial domain being investigated e.g. body space space within reaching space beyond reaching imaginal space Heterogeneity in neglect patients also means that dissociations across different tasks in a single patient are more the rule than the exception Evidence suggests that some of these dissociations can be readily explained by taking into account the amount of available attentional resources as a major determinant for the presence and the severity of neglect There is no doubt that neglect patients provide a wealth of information about the functioning of systems subserving attentional orienting and spatial processing Moreover their performance also show that some non spatial deficits are tightly coupled with more classic contralesional spatial deficits It seems however still unclear to what extent these non spatial deficits are an intrinsic characteristic of neglect or whether they are to be considered unspecific effects of the often massive brain lesions suffered by the patients From the clinical point of view neglect is a disorder that dramatically affects patients and their caregivers because it severely limits the individuals autonomy and motor recovery after brain damage For these reasons neglect is a disorder that is worth rehabilitating To be effective neglect rehabilitation should be based on the knowledge of what cognitive aspects are impaired and it should be focused on improving daily life performance For these reasons it is also important to detect and quantify subtle forms of neglect Evidence Based Dermatology Howard I. Maibach, 2011 Evidence based thinking in clinical medicine has impacted greatly on the physician's approach to clinical care Evidence Based Dermatology introduces and encourages the concept of evidence based patient care in dermatology Incorporating a text that is much more than merely the summary of trial data the authors worked to explore disease mechanisms and treatments in greater depth and detail in order to provide more insight for the reader In addition to promoting the understanding of the evidence based philosophy the authors have focused on some of the fundamentals in dermatology that need to be approached differently Issues such as the interpretation of clinical research disease oriented evidence versus patient care evidence and the use of placebo are examined methodological, intervention and neuroscientific perspectives in sports psychology Antonio Hernández-Mendo, M. Teresa Anguera, Verónica Morales-Sánchez, Jose María Carames Tejedor, 2023-01-20 *An Introduction to the Study of Hypnotism* Experimental and Therapeutic Hugh Edward Wingfield,1920 **Hypnotically Enhanced Treatment for Addictions** Joseph Tramontana, 2009-09-01 This book offers new strategies techniques and scripts as well as reviewing traditional methods of treating addictions The five key addictions addressed are alcohol abuse and dependency drug abuse and addiction gambling compulsions obsessions and addiction tobacco addiction including cigars pipes and chew food addiction compulsions Many of the techniques and strategies incorporate a variety of therapeutic modalities including cognitive behavioral techniques reframing and other NLP techniques systematic desensitization covert sensitization 12 step programs guided imagery and meditation and more The techniques described can be employed both in and out of trance
