Landscapes and Geomorphology Andrew Goudie, Heather Viles, 2010-08-26 What were the landscapes of the past like What will landscapes look like in the future Landscapes are all around us but most of us know very little about how they have developed what goes on in them and how they react to changing climates tectonics and human activities Examining what landscape is and how we use a range of ideas and techniques to study it Andrew Goudie and Heather Viles demonstrate how geomorphologists have built on classic methods pioneered by some great 19th century scientists to examine our Earth Using examples from around the world including New Zealand the Tibetan Plateau and the deserts of the Middle East they examine some of the key controls on landscape today such as tectonics and climate as well as humans and the living world They also discuss some key landscape detectives from the past including Charles Darwin who did some important but often overlooked research on landscape Concluding with the cultural importance of landscape and exploring how this has led to the conservation of much earth heritage they delve into the future and look at how we can predict the response of landscapes to climate change in the future

Enthält mehr als 1.000 Einträge zwischen 1.000 und 10.000 Wörtern, die vornehmlich in grundlegende Konzepte einführen, komplexe Themen erläutern und Informationen zu geographischen Gesellschaften aus aller Welt enthalten. Entstanden unter der Mitarbeit von mehr als 900 Wissenschaftlern aus über 40 Ländern und bietet damit einen umfassenden und fundierten Überblick über die Geographie in allen Erdteilen. Deckt das Fachgebiet umfassend ab und berücksichtigt auch die Richtungen Humangeographie, Physikalische Geographie, geographische Informationswissenschaften und Systeme Erdwissenschaften und Umweltwissenschaften. Führt interdisziplinäre Sichtweisen zu geographischen Themen und Verfahren zusammen, die auch für die Sozialwissenschaften, Geisteswissenschaften, Naturwissenschaften und Medizin von Interesse sind. Printausgabe durchgängig in Farbe mit über 1.000 Illustrationen und Fotos. Online-Ausgabe wird jährlich aktualisiert.

Theory and Methods Chris Philo, 2017-05-15 This volume tackles the complex terrain of theory and methods seeking to exemplify the major philosophical, social, theoretic and methodological developments, some with clear political and ethical implications that have traversed human geography since the era of the 1960s when spatial science came to the fore. Coverage includes Marxist and humanistic geographies and their many variations over the years as well as ongoing debates about agency, structure and the concepts of time, space, place and scale. Feminist and other positioned geographies alongside poststructuralist and posthumanist geographies are all evidenced as well as writings that push against the very limits of what human geography has embraced over these fifty-plus years. The volume combines readings that are well known and widely accepted as classic with readings that while less familiar are valuable in how they illustrate different possibilities for theory and method within the discipline. The volume also includes a substantial introduction by the editor contextualising the readings and in the process providing a new interpretation of the last half century of change within the thoughts and practices of human geography.

Landscape Representations Jorge Luis P. Oliveira-Costa, Tatiana A. Moreira, Fátima Velez de Castro, 2021-05-19 The study of landscapes has become so profound in its approaches that its incursion into society has confronted the scientific community with several views that link a broad path across various academic disciplines. This volume offers essential insights into the concepts and applications of some emerging perspectives in this field. Instead of focusing on only organisms or nature in order to better understand the world and its development, this book places humans and physical aspects at the centre of its focus, combining practical and experimental studies on nonhuman model organisms, ecological and geographical information, nature conservation and

territorial planning and the study of humans and society

Geomorphology David J. A. Evans, 2004-07-15 Geomorphology concerns the forms of the land's surface and the processes that create them. It is an integral part of studies in physical geography and also has significant bearing on geology and engineering. Since the nineteenth century many systems of classifying landforms have been devised and this has led to recognized areas of specialist study, most notably fluvial, slope, coastal, glacial and periglacial, arid lands and landscape evolution. This collection makes available in one place key published material on each of these areas of geomorphology and constitutes an instant archive of essential benchmark papers. By drawing together classic as well as more contemporary material, each volume provides an overview of each field and its development as well as a sense of where current debates are leading. The set as a whole provides representative coverage of the changing perspectives in the study of geomorphology over the past 100 years. The papers have been chosen by specialist editors working with the general editor David J. A. Evans and include introductions to each volume to set the selection in its intellectual and historical context.

Encyclopedia of Geography Barney Warf, 2010-09-21 Simply stated, geography studies the locations of things and the explanations that underlie spatial distributions. Profound forces at work throughout the world have made geographical knowledge increasingly important for understanding numerous human dilemmas and our capacities to address them. With more than 1,200 entries, the *Encyclopedia of Geography* reflects how the growth of geography has propelled a demand for intermediaries between the abstract language of academia and the ordinary language of everyday life. The six volumes of this encyclopedia encapsulate a diverse array of topics to offer a comprehensive and useful summary of the state of the discipline in the early 21st century.

Key Features Gives a concise historical sketch of geography's long, rich and fascinating history, including human geography, physical geography and GIS. Provides succinct summaries of trends such as globalization, environmental destruction, new geospatial technologies and cyberspace. Decomposes geography into the six broad subject areas: physical geography, human geography, nature and society, methods, models and GIS, history of geography and geographer biographies, geographic organizations and important social movements. Provides hundreds of color illustrations and images that lend depth and realism to the text. Includes a special map section.

Key Themes Physical Geography, Human Geography, Nature and Society, Methods, Models and GIS, People, Organizations and Movements, History of Geography. This encyclopedia strategically reflects the enormous diversity of the discipline, the multiple meanings of space itself and the diverse views of geographers. It brings together the diversity of geographical knowledge, making it an invaluable resource for any academic library.

Key Methods in Geography Nicholas Clifford, Gill Valentine, 2003-06-06 *Key Methods in Geography* is an introduction for undergraduates to the principal methodological issues involved in the collection, analysis and presentation of geographical information. It provides an accessible primer which will be used by students as a reference throughout their degree on all issues from research design to presentation. A unique feature of the book is that it provides definitions of terms from both human geography and physical geography. Organized into four parts: Getting Started in

Geographical Research Data Collection in Human Geography Data Collection in Physical Geography Analyzing and Representing Geographical Data Each chapter is comprised of a short definition a summary of the principal arguments a substantive 5 000 word discussion the use of real life examples and annotated notes for further reading The teaching of research methods is integral in all geography courses Key Methods in Geography identifies the key analytical and observational strategies with which all geography undergraduates should be conversant
