Landscape Reclamation Luis Loures, 2020-02-19 Ongoing landscape transformation worldwide has raised global concerns and there is a need to rethink landscaping to protect the environment This is especially true for previously developed sites currently abandoned or underused Instead of consuming green lands these derelict landscapes need to be redeveloped and given new life enabling their transition to an increasingly sustainable urban setting In this scenario the present book considers a set of subjects that highlight the diverse nature of the scientific domains associated with landscape reclamation emphasizing the need to acknowledge that the contribution of each sustainability dimension is equally important This will offer complementary development opportunities while enabling redeveloped landscapes to fulfill multiple functions in an integrated way and underline the relevance of multifunctionality to promote sustainable landscape reclamation planning and development

Landscapes and Landforms of Western Canada Olav Slaymaker, 2016-12-01 This is the only book to focus on the geomorphological landscapes of Canada West It outlines the little appreciated diversity of Canada's landscapes and the nature of the geomorphological landscape which deserves wider publicity Three of the most important geomorphological facts related to Canada are that 90% of its total area emerged from ice sheet cover relatively recently from a geological perspective permafrost underlies 50% of its landmass and the country enjoys the benefits of having three oceans as its borders the Arctic Pacific and Atlantic oceans Canada West is a land of extreme contrasts from the rugged Cordillera to the wide open spaces of the Prairies from the humid west coast forests to the semi desert in the interior of British Columbia and from the vast Mackenzie river system of the to small steep cascading streams on Vancouver Island The thickest Canadian permafrost is found in the Yukon and extensive areas of the Cordillera are underlain by sporadic permafrost side by side with the never glaciated plateaus of the Yukon One of the curiosities of Canada West is the presence of volcanic landforms extruded through the ice cover of the late Pleistocene and Holocene

epochs which have also left a strong imprint on the landscape The Mackenzie and Fraser deltas provide the contrast of large river deltas debouching respectively into the Arctic and Pacific oceans

Cultural Landscapes of South Asia Kapila Silva, Amita Sinha, 2016-10-14 Winner of the Environmental Design Research Association's 2018 Achievement Award The pluralism of South Asia belies any singular reading of its heritage In spite of this diversity its cultural traditions retain certain attributes that are at their core South Asian in their capacity to self organize enact and reinvent cultural memories and in their ability to retain an intimate connection with nature and landscape This volume focuses on the notion of cultural landscape as a medium integrating multiple forms of heritage and points to a new paradigm for conservation practices in the South Asian context Even though the construct of cultural landscape has been accepted as a category of heritage its potent use in heritage management in general and within the South Asian context in particular has not been widely studied The volume challenges the prevalent views of heritage management in South Asia that are entrenched in colonial legacies and contemporary global policy frameworks

Restoration and Reclamation of Boreal Ecosystems Dale Vitt, Jagtar Bhatti, 2012-09-20 Boreal ecosystems contain one third of the world's forests and stored carbon but these regions are under increasing threat from both natural and anthropogenic disturbances Written by leaders from the forefront of private public and academic sectors Restoration and Reclamation of Boreal Ecosystems emphasises a broad conceptual approach to the specific application of empirical research into development planning restoration and modelling of these ecosystems The importance of this is highlighted at a time of global climate change as these ecosystems act as carbon sinks There is a focus on the reclamation of exploited ecosystems from a holistic standpoint ranging from environmental and edaphic variables to the restoration of keystone flora Recent advances in quantification of ecosystem services such as habitat suitability and carbon storage modelling are also detailed The book contains case studies which address how both historical and novel assemblages can provide ecosystem stability under projected climatic and land use scenarios
