Language Structure Discourse And The Access To Consciousness Advances In Consciousness Research:

Language Structure, Discourse and the Access to Consciousness Maxim I. Stamenov, 1997-09-02 The focus of this collective volume is on the mutual determination of language structure discourse patterns and the accessibility to consciousness of mental contents of different types of organization and complexity The contributions address the following problems among others the history of the interpretation of conscious and unconscious mind in the theoretical discourse of modern linguistics the determination of the structure of consciousness by the grammatical structure the levels of access of grammatical and lexical information to consciousness the development of cognitive complexity and control in ontogeny pathologies of consciousness access in discourse comprehension and production the cognitive contextual prerequisites for the representation of meaning in consciousness the relationships between language structure and qualia in the phenomenology of experience the dialogical structure of intentionality and meaning representation etc Series B Space, Time and Evaluation in Ideological Discourse Laura Filardo-Llamas, Christopher Hart, Bertie Kaal, 2017-10-02 Bringing together a body of related research which has recently developed in Critical Discourse Analysis this book is the first to address the role of perspective in socio political discourse Specifically the contributions to this volume seek to explore from a cognitive standpoint the way in which perspective functions in three dimensions space time and evaluation to enact ideology and persuasion A range of discourse genres are analysed including political discourse media discourse and songs used as political tools Starting from the contention that discourse processing relies on the same mechanisms that support our understanding and experience of space the book finds a recurrent theme in the way in which perspectival concepts like distance and focus prompted by linguistic signs feature in our discursively constructed knowledge of social and political realities By highlighting the complex nature of perspective taking in ideological discourse the volume sets the agenda for further research in this area The book will appeal to linguists discourse analysts media scholars and political scientists and all who are interested in the relationship between language and cognition in the socio political domain This book was originally published as a special issue of Critical Discourse Studies **The Structure and Development of Self-Consciousness** Dan Zahavi, Thor Grünbaum, Josef Parnas, 2004-09-23 Self consciousness is a topic of considerable importance to a variety of empirical and theoretical disciplines such as developmental and social psychology cognitive neuroscience psychiatry and philosophy This volume presents essays on self consciousness by prominent psychologists cognitive neurologists and philosophers Some of the topics included are the infants sense of self and others theory of mind phenomenology of embodiment neural mechanisms of action attribution and hermeneutics of the self A number of these essays argue in turn that empirical findings in developmental psychology phenomenological analyses of embodiment or studies of pathological self experiences point to the existence of a type of self consciousness that does not require any explicit I thought or self observation but is more adequately described as a pre reflective embodied form of self familiarity The

different contributions in the volume amply demonstrate that self consciousness is a complex multifaceted phenomenon that calls for an integration of different complementary interdisciplinary perspectives Series B **The Primacy of Movement** Maxine Sheets-Johnstone,1999-01-01 Through diligent and rigorous attention to both natural history and phenomenological accounts of kinetic phenomena particularly the phenomenon of self movement this interdisciplinary book brings to the fore the long neglected topic of animate form and with it a long neglected inquiry into the significance of animation It addresses methodological and foundational issues at length **Consciousness and Self-Consciousness** Rocco J.

Gennaro,1996-03-20 This interdisciplinary work contains the most sustained attempt at developing and defending one of the few genuine theories of consciousness Following the lead of David Rosenthal the author argues for the so called higher order thought theory of consciousness This theory holds that what makes a mental state conscious is the presence of a suitable higher order thought directed at the mental state In addition the somewhat controversial claim that consciousness entails self consciousness is vigorously defended The approach is mostly analytic in style and draws on important recent work in cognitive science perception artificial intelligence neuropsychology and psychopathology However the book also makes extensive use of numerous Kantian insights in arguing for its main theses and in turn sheds historical light on Kant's theory of mind A detailed analysis of the relationships between self consciousness behavior memory intentionality and de se attitudes are examples of the central topics to be found in this work Series A On Becoming Aware Natalie

Depraz,Francisco J. Varela,Pierre Vermersch,2003 This book searches for the sources and means for a disciplined practical approach to exploring human experience The spirit of this book is pragmatic and relies on a Husserlian phenomenology primarily understood as a method of exploring our experience The authors do not aim at a neo Kantian a priori new theory of experience but instead they describe a concrete activity how we examine what we live through how we become aware of our own mental life The range of experiences of which we can become aware is vast all the normal dimensions of human life perception motion memory imagination speech everyday social interactions cognitive events that can be precisely defined as tasks in laboratory experiments e g a protocol for visual attention but also manifestations of mental life more fraught with meaning dreaming intense emotions social tensions altered states of consciousness The central assertion in this work is that this immanent ability is habitually ignored or at best practiced unsystematically that is to say blindly Exploring human experience amounts to developing and cultivating this basic ability through specific training Only a hands on non dogmatic approach can lead to progress and that is what animates this book Series B **The Caldron of Consciousness** Ralph D.

Ellis,Natika Newton,2000-01-01 These new studies by prominent neuroscientists psychologists and philosophers work toward a coherent framework for understanding emotion and its contribution to the functioning of consciousness in general as an aspect of self organizing embodied subjects Distinguishing consciousness from unconscious information processing hinges on the role of motivating emotions in all conscious modalities and how emotional brain processes interact with those

traditionally associated with cognitive function Computationally registering processing sensory signals e g in the occipital lobe or area V4 by itself does not result in perceptual consciousness which requires subcortical structures such as amygdala hypothalamus and brain stem This interdisciplinary anthology attempts to understand the complexity of emotional intentionality why the role of motivation in self organizing processes is crucial in distinguishing conscious from unconscious processes how emotions account for agency and how an adequate approach to emotion motivation can address the traditional mind body problem through a holistic understanding of the conscious behaving organism Series B Dimensions of Conscious Experience Paavo Pylkkänen,Tere Vadén,2001 It is by now commonly agreed that the proper study of consciousness requires a multidisciplinary approach which focuses on the varieties and dimensions of conscious experience from different angles This book which is based on a workshop held at the University of Skövde Sweden provides a microcosm of the emerging discipline of consciousness studies and focuses on some important but neglected aspects of consciousness The book brings together philosophy psychology cognitive neuroscience linguistics cognitive and computer science biology physics art and the new media It contains critical studies of subjectivity vs objectivity nonconceptuality vs conceptuality language evolutionary aspects neural correlates microphysical level creativity visual arts and dreams It is suitable as a text book for a third year undergraduate or a graduate seminar on consciousness studies Series A My Double Unveiled Giuseppe Vitiello,2001 This introduction to the dissipative quantum model of brain and to its possible implications for consciousness studies is addressed to a broad interdisciplinary audience Memory and consciousness are approached from the physicist point of view focusing on the basic observation that the brain is an open system continuously interacting with its environment The unavoidable dissipative character of the brain functioning turns out to be the root of the brain's large memory capacity and of other memory features such as memory association memory confusion duration of memory The openness of the brain implies a formal picture of the world which is modeled on the same brain image a sort of brain copy or Double where world objectiveness and the brain implicit subjectivity are conjugated Consciousness is seen to arise from the permanent dialogue of the brain with its Double The author's narration of his research gives a cross over of the physics of elementary particles and condensed matter and the brain's basic dynamics This dynamic interplay makes for a satisfying feeling of the unity of knowledge Series A Consciousness and Qualia Leopold Stubenberg,1998 Consciousness and Qualia is a philosophical study of qualitative consciousness characteristic examples of which are pains experienced colors sounds etc This study strives for phenomenological adequacy and thus the first person point of view dominates throughout

Consciousness and Intentionality Grant Gillett,John McMillan,2001-01-01 Is there an internal relationship between consciousness and intentionality Can mental content be described in such a way so as to avoid dualism What is the influence of social context upon consciousness conceptions of self and mental content This book considers questions such as these and argues for a conception of consciousness mental content and intentionality that is anti Cartesian in its major tenets Focusing

upon the rule governed nature of concepts and the grounding of the rules for concept use in the practical world intentional consciousness emerges as a phenomena that depends upon social context Given that dependence the authors consider and set aside attempts to reduce human consciousness and intentionality to phenomena explicable at biological or neuroscientific levels Series A **Ten Lectures on the Elaboration of Cognitive Grammar** Ronald Langacker, 2017-07-31 This book

reviews the basic claims and descriptive constructs of Cognitive Grammar outlines major themes in its ongoing development and applies these notions to central problems in grammatical analysis The initial review covers conceptual semantics the conceptual characterization of grammatical categories grammatical constructions and the architecture of a unified theory of language structure Main themes in the framework s development include the dynamicity of language structure grammar as the implementation of semantic functions systems of opposing elements to serve those functions and organization in strata representing successive elaborations of a baseline structure The descriptive application of these notions centers on nominal and clausal structure with special emphasis on nominal grounding **Consciousness Recovered** George

Mandler, 2002-01-01 This integrated approach to the psychology of consciousness arises out of Mandler s 1975 paper that was seminal in starting the current flood of interest in consciousness The book starts with this paper followed by a novel psychological evolutionary theoretical discussion of consciousness and then a historically oriented presentation of relevant functions of consciousness from memory to attention to emotion drawing in part on Mandler s publications between 1975 and 2000 The manuscript is controversial it is outspoken and often judgmental The book does not address speculations about the neurophysiological brain bases of consciousness arguing that these are premature and it is highly critical of philosophical speculations often ungrounded in any empirical observations In short it is a psychological approach pure and simple

Consciousness Emerging Renate Bartsch, 2002-01-01 This study of the workings of neural networks in perception and understanding of situations and simple sentences shows that and how distributed conceptual constituents are bound together in episodes within an interactive dynamic architecture of sensorial and pre motor maps and maps of conceptual indicators semantic memory and individuating indicators historical episodic memory Activation circuits between these maps make sensorial and pre motor fields in the brain function as episodic maps creating representations which are expressions in consciousness It is argued that all consciousness is episodic consisting of situational or linguistic representations and that the mind is the whole of all conscious manifestations of the brain Thought occurs only in the form of linguistic or image representations The book also discusses the role of consciousness in the relationship between causal and denotational semantics and its role for the possibility of representations and rules Four recent controversies in consciousness research are discussed and decided along this model of consciousness Is consciousness an internal or external monitoring device of brain states Do all conscious states involve thought and judgement Are there different kinds of consciousness Do we have a one on one correspondence between certain brain states and conscious states The book discusses also the role of consciousness in

the relationship between causal and denotational semantics and its role for the possibility of representations and rules

Series A The Evolution of Human Language Wolfgang Wildgen, 2004-06-30 Wolfgang Wildgen presents three perspectives on the evolution of language as a key element in the evolution of mankind in terms of the development of human symbol use 1 He approaches this question by constructing possible scenarios in which mechanisms necessary for symbolic behavior could have developed on the basis of the state of the art in evolutionary anthropology and genetics 2 Non linguistic symbolic behavior such as cave art is investigated as an important clue to the developmental background to the origin of language Creativity and innovation and a population's ability to integrate individual experiments are considered with regard to historical examples of symbolic creativity in the visual arts and natural sciences 3 Probable linguistic fossils of such linguistic innovations are examined The results of this study allow for new proposals for a protolanguage and for a theory of language within a broader philosophical and semiotic framework and raises interesting questions as to human consciousness universal grammar and linguistic methodology

Series B *Sisyphus's Boulder* Eric Dietrich, Valerie Gray Hardcastle, 2005-02-17 Consciousness lies at the core of being human Therefore to understand ourselves we need a theory of consciousness In *Sisyphus's Boulder* Eric Dietrich and Valerie Hardcastle argue that we will never get such a theory because consciousness has an essential property that prevents it from ever being explained Consequently philosophical debates over materialism and dualism are a waste of time Scientific explanations of consciousness fare no better Scientists do study consciousness and such investigations will continue to grow and advance However none of them will ever reveal what consciousness is In addition given the centrality of consciousness in philosophy Dietrich and Hardcastle claim that philosophy itself needs to change That the central problems of philosophy persist is actually a profound epistemic fact about humans Philosophy then is a limit to what humans can understand

Series A *Grammar and Conceptualization* Ronald W. Langacker, 2010-12-14 *Grammar and Conceptualization* documents some major developments in the theory of cognitive grammar during the last decade By further articulating the framework and showing its application to numerous domains of linguistic structure this book substantiates the claim that lexicon morphology and syntax form a gradation consisting of assemblies of symbolic structures form meaning pairings

The Development of Implicit and Explicit Memory Carolyn K. Rovee-Collier, Harlene Hayne, Michael Colombo, 2001-01-01 This is the only book that examines the theory and data on the development of implicit and explicit memory It first describes the characteristics of implicit and explicit memory including conscious recollection and tasks used with adults to measure them Next it reviews the brain mechanisms thought to underlie implicit and explicit memory and the studies with amnesics that initially prompted the search for different neuroanatomically based memory systems Two chapters review the Jacksonian first in last out principle and empirical evidence for the hierarchical appearance and dissolution of two memory systems in animal models rats nonhuman primates children and normal amnesic adults Two chapters examine memory tasks used with human infants and evidence of implicit and explicit

memory during early infancy Three final chapters consider structural and processing accounts of adult memory dissociations their applicability to infant memory dissociations and implications of infant data for current concepts of implicit and explicit memory Series B Consciousness Evolving James H. Fetzer, 2002-01-01 A collection of stimulating studies on the past the present and the future of consciousness Consciousness Evolving contributes to understanding some of the most important conceptual problems of our time The advent of the modern synthesis together with the human genome project affords a platform for considering what it is that makes humans distinctive Beginning with an essay that accents the nature of the problem within a behavioristic framework and concluding with reflections on the prospects for a form of immortality through serial cloning the chapters are divided into three sections which concern how and why consciousness may have evolved special capacities involving language creativity and mentality as candidates for evolved adaptations and the prospects for artificial evolution though the design of robots with specific forms of consciousness and mind This volume should appeal to every reader who wants to better understand the human species including its distinctive properties and its place in nature Series A **Subjectification** Angeliki Athanasiadou, Costas Canakis, Bert Cornillie, 2011-12-22 Subjectification is a widespread phenomenon and has emerged as a most pervasive tendency in diachronic semantic change Traugott and in synchronic semantic extension Langacker Its importance is increasingly valued despite the fact that it is an area that has been treated differently by different scholars One of the book's objectives is to generate a clearer understanding of the two major models of subjectivity to see where they can meet but also where intrinsic differences present barriers to any integration Another objective is to speculate on whether the notions of subjectivity and subjectification have reshaped our understanding of grammar The goals of the volume are the following The volume brings together contributions dealing with particular areas of grammar in the framework of subjectivity and subjectification Starting with Stein and Wright's 1995 edition publications on the specific process have broadened the scope of this research Indeed the question how far have we come addressed in the introduction has become central in reaching a clearer understanding of the above framework and even expanding it Individual papers explore not only wider questions and implications on the theoretical status of subjectivity and subjectification in language but are empirically supported by thorough and extensive data from different languages Asian languages German Spanish Greek Dutch English These studies of particular areas of grammar modals adjectives or of levels of analysis syntax can help implement or adapt the existing accounts of subjectivity made in the literature The challenge for every single paper is to show whether the two major approaches Langacker's and Traugott's can possibly be integrated or whether they are fundamentally different The papers also investigate into the questions whether we have a continuum from highly subjective to more objective whether subjective need be opposed to objective or whether subjective may also be understood in contrast to neutral which is often the case in Traugott's examples of grammaticalization Furthermore the issue of intersubjectivity i.e. putting the addressee's perspective onstage is also discussed
