S. Rao, 2020-12-04 Literacy is an individual's ability to read and write The complexities of skills required to be literate raise an intriguing question how does one become literate Literacy skills emerge during early childhood known as emergent literacy and lead a child towards the path of reading Many precursors such as oral language skills phonological awareness skills and written language print awareness skills facilitate the development of emergent literacy The subcomponents within each of these precursors have a very intricate relationship with one another The attempts made over the last few decades to understand the components of literacy the stages of literacy acquisition in children and literacy failure in school children are evident in research reports but the focus appears to be skewed towards monolingual children As a result a void exists when one encounters a bilingual child for assessment However studies from linguistically diverse countries in recent years highlight the differences in early literacy behaviors of monolingual children and bilingual children As a consequence the knowledge gap is slowly narrowing to recognize the emergent literacy spectrum in bilingual children who are known to have cognitive advantages Since cognition language and literacy fall on a continuum there are bound to be advantages for bilingual multilingual children in the development of early literacy behaviors The available information supports the idea of cognitive benefits derived through exposure to languages emphasizing that communication is more important than the specific linguistic units used by the teachers Emergent Literacy Spectrum of Bilingual Children in India describes the concepts components and dimensions of literacy and emergent literacy bilingualism language and script diaspora in the Indian context the continuum of language and literacy language policy for education in India challenges for identification assessment and promotion of emergent literacy skills in India and typical examples in Indian languages with research evidence for understanding the spectrum of emergent literacy in bilingual children A theoretical rationale is given for each of the concepts followed by simple descriptions examples and illustrations The book provides crucial knowledge and useful tips for professionals teachers and informed parents in their teaching learning activities with children Researchers may explore the ideas discussed in the monograph by pursuing studies to augment our knowledge of the acquisition of literacy in bilingual children The author's many years of experience as a speech language pathologist in the Indian subcontinent suggests that there is scanty information on emergent literacy in Indian

*An Anthology of Bilingual Child Phonology* Elena Babatsouli, Martin J. Ball, 2020-06-22 This edited book is a collection of studies on protolanguage phonology referring to the development of children's autonomous linguistic systems from their first meaningful forms to complete cognitive and articulatory acquisition of language. The volume comprises chapters on child bilingual phonological development understood as the acquisition or use of more than one linguistic code whether actual languages, dialects or communication modes in an array of contexts. Such contexts include endogenous and exogenous bilingualism, heritage language, bilingualism, trilingualism and typical and atypical use. The contributed works here will be of interest to researchers and postgraduate students investigating language acquisition in bi-multilingual settings as well as those working on child phonological development across a variety of languages.

*Bilingual Competence and Bilingual Proficiency in Child Development* Norbert Francis, 2011-11-18 A study of first and second language development in an indigenous community with implications for broader linguistic and cognitive issues. When two or more languages are part of a child's world we are presented with a rich opportunity to learn something about language in general and about how the mind works. In this book Norbert Francis examines the development of bilingual proficiency and the different kinds of competence that come together in making up its component parts. In particular he explores problems of language ability when children use two languages for tasks related to schooling especially in learning how to read and write. He considers both broader research issues and findings from an ongoing investigation of child bilingualism in an indigenous language speaking community in Mexico. This special sociolinguistic context allows for a unique perspective on some of the central themes of bilingualism research today including the distinction between competence and proficiency, modularity and the Poverty of Stimulus problem. Francis proposes that competence knowledge should be considered as an integral component of proficiency ability rather than something separate and apart, arguing that this approach allows for a more inclusive assessment of research findings from diverse fields of study. The bilingual indigenous language project illustrates how the concepts of modularity and the competence/proficiency distinction in particular might be applied to problems of language learning and literacy. Few investigations of indigenous language and culture approach bilingual research problems from a cognitive science perspective. By suggesting connections to broader cognitive and linguistic issues, Francis points the way to further research along these lines.
