Language Brain And Interactive Processes:

Language, Brain and Interactive Processes Roger Gurney, 1973-01-01 *Language, Brain, and Cognitive Development* Jacques Mehler, 2001 The contributions to this collection assess the progress of cognitive science The questions addressed include What have we learned or not learned about language brain and cognition Where are we now Where have we failed Where have we succeeded *Language and the Brain* Jonathan R. Brennan, 2022-05-12 This book introduces readers to the state of the art neuroscientific research that is revolutionizing our understanding of language Interest in the brain bases of language goes back to the birth of the modern neurosciences in the late nineteenth century Today tools such as fMRI and EEG allow us to study brain activity non invasively as people perform complex cognitive tasks like talking or reading In this book Jonathan Brennan shows how brain signals are connected with the intricate cognitive structures that underlie human language Each chapter focuses on specific insights including the neural codes for speech perception meaning and sentence structure The book also explores larger themes such as how to connect abstract notions like knowing a language to concrete signals that are measured in a laboratory and how to reconcile apparently conflicting pieces of data that arise from different experiments Written in an accessible conversational style and featuring a glossary of key terms this slim guide will appeal to a wide range of readers interested in how the human brain allows us to use language *Language and the Brain* Yosef Grodzinsky, Lewis P. Shapiro, David Swinney, 2000-02-28 The study of language has increasingly become an area of interdisciplinary interest Not only is it studied by speech specialists and linguists but by psychologists and neuroscientists as well particularly in understanding how the brain processes meaning This book is a comprehensive look at sentence processing as it pertains to the brain with contributions from individuals in a wide array of backgrounds covering everything from language acquisition to lexical and syntactic processing speech pathology memory neuropsychology and brain imaging *Language, Music, and the Brain* Michael A. Arbib, 2013-06-28 A presentation of music and language within an integrative embodied perspective of brain mechanisms for action emotion and social coordination This book explores the relationships between language music and the brain by pursuing four key themes and the crosstalk among them song and dance as a bridge between music and language multiple levels of structure from brain to behavior to culture the semantics of internal and external worlds and the role of emotion and the evolution and development of language The book offers specially commissioned expositions of current research accessible both to experts across disciplines and to non experts These chapters provide the background for reports by groups of specialists that chart current controversies and future directions of research on each theme The book looks beyond mere auditory experience probing the embodiment that links speech to gesture and music to dance The study of the brains of monkeys and songbirds illuminates hypotheses on the evolution of brain mechanisms that support music and language while the study of infants calibrates the developmental timetable of their capacities The result is a unique book that will interest any reader seeking to learn more about language or music and will

appeal especially to readers intrigued by the relationships of language and music with each other and with the brain

Interaction Between Linguistic and Nonlinguistic Factors Masatoshi Koizumi, 2023-12-04 Issues in Japanese Psycholinguistics from Comparative Perspectives compiles over 30 state of the art articles on Japanese psycholinguistics It emphasizes the importance of using comparative perspectives when conducting psycholinguistic research Psycholinguistic studies of Japanese have contributed greatly to the field from a cross linguistic perspective However the target languages for comparison have been limited Most research focuses on English and a few other typologically similar languages As a result many current theories of psycholinguistics fail to acknowledge the nature of ergative absolutive and or object before subject languages The cross linguistic approach is not the only method of comparison in psycholinguistics Other prominent comparative aspects include comprehension vs production native speakers vs second language learners typical vs aphasic language development Many of these approaches are underrepresented in Japanese psycholinguistics The studies reported in the volumes attempt to bridge these gaps Using various experimental and or computational methods they address issues of the universality diversity of the human language and the nature of the relationship between human cognitive modules Volume 2 Interaction Between Linguistic and Nonlinguistic Factors provides studies on the interaction between linguistic and non linguistic factors

Williams, 2023-06-02 This handbook provides a comprehensive overview of the theories of cognition and language processing relevant to the field of communication disorders Thoroughly updated in its second edition the book explores a range of topics and issues that illustrate the relevance of a dynamic interaction between both theoretical and applied clinical work Beginning with the origins of language evolution the authors explore a range of both developmental and acquired communication disorders reflecting the variety and complexity of psycholinguistics and its role in extending our knowledge of communication disorders The first section outlines some of the major theoretical approaches from psycholinguistics and cognitive neuroscience that have been influential in research focusing on clinical populations while Section II features examples from researchers who

have applied this body of knowledge to developmental disorders of communication Section III features examples focusing on acquired language disorders and finally Section IV considers psycholinguistic approaches to gesture sign language and alternative and augmentative communication AAC The new edition features new chapters offering fresh perspectives further reading recommendations and a new epilogue from Jackie Guendouzi This valuable text serves as a single interdisciplinary resource for graduate and upper level undergraduate students in cognitive neurosciences psychology communication sciences and disorders as well as researchers new to the field of communication disorders or to psycholinguistic theory

Understanding Language and Cognition through Bilingualism Gigi Luk, John A.E. Anderson, John G. Grundy, 2023-06-15 Bilingualism is a ubiquitous global phenomenon Beyond being a language experience bilingualism also entails a social experience and it interacts with development and learning with cognitive and neural consequences across the lifespan The authors of this volume are world renowned experts across several subdisciplines including linguistics developmental psychology and cognitive neuroscience They bring to light bilingualism s cognitive developmental and neural consequences in children young adults and older adults This book honors Ellen Bialystok and highlights her profound impact on the field of bilingualism research as a lifelong experience The chapters are organized into four sections The first section explores the complexity of the bilingual experience beyond the common characterization of speaking multiple languages The next section showcases Ellen Bialystok s earlier impact on psychology and education here the contributors answer the question how does being bilingual shape children s development The third section explores cognitive and neuroscientific theories describing how language experience modulates cognition behavior and brain structures and functions The final section shifts the focus to the impact of bilingualism on healthy and abnormal aging and asks whether being bilingual can stave off the effects of dementia by conferring a cognitive reserve

Baltes, Patricia A. Reuter-Lorenz, Frank Rösler, 2006-06-19 The book focuses on the developmental analysis of the brain culture environment dynamic and argues that this dynamic is interactive and reciprocal Brain and culture co determine each other As a whole this book refutes any unidirectional conception of the brain culture dynamic Each is influenced by and modifies the other To capture the ubiquitous reach and significance of the mutually dependent brain culture system the metaphor of biocultural co constructivism is invoked Distinguished researchers from cognitive neuroscience cognitive psychology and developmental psychology review the evidence in their respective fields A special focus of the book is its coverage of the entire human lifespan from infancy to old age [Syntax, the brain, and linguistic theory: a critical reassessment](#), 2024-07-23 Syntax refers both to the structure of sentences and the underlying combinatorial capacity to generate this structure For some time neurolinguistic research on syntax was heavily influenced by theoretical linguistic approaches which characterize in detail the nature of syntactic representations A rough consensus has been that the primary region supporting syntax is Broca's area and that syntactic deficits in aphasia exist primarily due to damage or degeneration of this region commonly occurring in Broca's aphasia and nonfluent agrammatic PPA With respect to temporal dynamics of syntactic processing neurophysiological research on syntax focused on specific event related potentials such as the ELAN and P600 thought to index phrase structure building and syntactic reanalyses However the research landscape has changed substantially in the last several years with new methodologies and theoretical perspectives and there is little consensus on

the neurobiological foundations of syntax or the role of linguistic theory in guiding research The goal of this Research Topic is to reassess our understanding of syntax and the brain in light of these developments Specifically it is designed to address the following set of major questions

Cognitive Processing in Bilinguals R.J. Harris,1992-01-23 This collection of 33 papers represents the most current thinking and research on the study of cognitive processing in bilingual individuals The contributors include well known figures in the field and promising new scholars representing four continents and work in dozens of languages Instead of the social political or educational implications of bilingualism the focus is on how bilingual people mostly adults think and process language

Predictions in the Brain Moshe Bar,2011-05-10 When one is immersed in the fascinating world of neuroscience findings the brain might start to seem like a collection of modules each specializes in a specific mental feat But just like in other domains of Nature it is possible that much of the brain and mind's operation can be explained with a small set of universal principles Given exciting recent developments in theory empirical findings and computational studies it seems that the generation of predictions might be one strong candidate for such a universal principle This is the focus of Predictions in the brain From the predictions required when a rat navigates a maze to food caching in scrub jays from predictions essential in decision making to social interactions from predictions in the retina to the prefrontal cortex and from predictions in early development to foresight in non humans The perspectives represented in this collection span a spectrum from the cellular underpinnings to the computational principles underlying future related mental processes and from systems neuroscience to cognition and emotion In spite of this diversity they share some core elements Memory for instance is critical in any framework that explains predictions In asking what is next our brains have to refer to memory and experience on the way to simulating our mental future But as much as this collection offers answers to important questions it raises and emphasizes outstanding ones How are experiences coded optimally to afford using them for predictions How do we construct a new simulation from separate memories How specific in detail are future oriented thoughts and when do they rely on imagery concepts or language Therefore in addition to presenting the state of the art of research and ideas about predictions as a universal principle in mind and brain it is hoped that this collection will stimulate important new research into the foundations of our mental lives

What makes written words so special to the brain? Gui Xue,Urs Maurer,Mohamed L Seghier,2015-01-22 Reading is an integral part of life in today's information driven societies Since the pioneering work of Dejerine on word blindness in brain lesioned patients the literature has increased exponentially from neuropsychological case reports to mechanistic accounts of word processing at the behavioural neurofunctional and computational levels tapping into diverse aspects of visual word processing These studies have revealed some exciting findings about visual word processing including how the brain learns to read how changes in literacy impact upon word processing strategies and whether word processing mechanisms vary across different alphabetic logographic or artificial writing systems Other studies have attempted to characterise typical and atypical word processes in special populations in

order to explain why dyslexic brains struggle with words how multilingualism changes the way our brains see words and what the exact developmental signatures are that would shape the acquisition of reading skills Exciting new insights have also emerged from recent studies that have investigated word stimuli at the system network level by looking for instance at how the reading system interacts with other cognitive systems in a context dependent fashion how visual language stimuli are integrated into the speech processing streams how both left and right hemispheres cooperate and interact during word processing and what the exact contributions of subcortical and cerebellar regions to reading are The contributions to this Research Topic highlight the latest findings regarding the different issues mentioned above particularly how these findings can explain or model the different processes mechanisms pathways or cognitive strategies by which the human brain sees words The introductory editorial summarising the contributions included here highlights how varieties of behavioural tests and neuroimaging techniques can be used to investigate word processing mechanisms across different alphabetic and logographic writing systems
