Each wordnet in the database represents a language specific structure due to the unique lexicalization of concepts in  
languages The concepts are inter linked via a separate Inter Lingual Index where equivalent concepts across languages  
should share the same index item The flexible multilingual design of the database makes it possible to compare the  
lexicalizations and semantic structures revealing answers to fundamental linguistic and philosophical questions which could

never be answered before How consistent are lexical semantic networks across languages what are the language specific differences of these networks is there a language universal ontology how much information can be shared across languages First attempts to answer these questions are given in the form of a set of shared or common Base Concepts that has been derived from the separate wordnets and their classification by a language neutral top ontology These Base Concepts play a fundamental role in several wordnets Nevertheless the database may also serve many practical needs with respect to cross language information retrieval machine translation tools language generation tools and language learning tools which are discussed in the final chapter The book offers an excellent introduction to the EuroWordNet project for scholars in the field and raises many issues that set the directions for further research in semantics and knowledge engineering **Library of**
