Language Of Word Meaning:

The Language of Word Meaning Pierrette Bouillon, Federica Busa, 2001-01-15 This volume is a collection of original contributions from outstanding scholars in linguistics philosophy and computational linguistics exploring the relation between word meaning and human linguistic creativity The papers present different aspects surrounding the question of what is word meaning a problem that has been the centre of heated debate in all those disciplines that directly or indirectly are concerned with the study of language and of human cognition The discussions are centred around a view of the mental lexicon as outlined in the Generative Lexicon theory Pustejovsky 1995 which proposes a unified model for defining word meaning The individual contributors present their evidence for a generative approach as well as critical perspectives which provides for a volume where word meaning is not viewed only from a particular angle or from a particular concern but from a wide variety of topics each introduced and explained by the editors

The Language of Word Meaning Federica Busa, Pierrette Bouillon, 2008-09-08 This volume is a collection of original contributions that address the problem of words and their meaning This represents a still difficult and controversial area within various disciplines linguistics philosophy and artificial intelligence Although all of these disciplines have to tackle the issue so far there is no overarching methodology agreed upon by researchers The aim of the volume is to provide answers based on empirical linguistics methods that are relevant across all the disciplines and provide a bridge among researchers looking at word meaning from different angles

Word Meaning and Montague Grammar D. R. Dowty, 2012-12-06 The most general goal of this book is to propose and illustrate a program of research in word semantics that combines some of the methodology and results in linguistic semantics primarily that of the generative semantics school with the rigorously formalized syntactic and semantic framework for the analysis of natural languages developed by Richard Montague and his associates a framework in which truth and denotation with respect to a model are taken as the fundamental semantic notions I hope to show both from the linguists and the philosophers point of view not only why this synthesis can be undertaken but also why it will be useful to pursue it On the one hand the linguists decompositions of word meanings into more primitive parts are by themselves inherently incomplete in that they deal only in distinctions in meaning without providing an account of what meanings really are Not only can these analyses be made complete by a model theoretic semantics but also such an account of these analyses renders them more exact and more readily testable than they could ever be otherwise
