Adaptive and Multilevel Metaheuristics Carlos Cotta, Marc Sevaux, Kenneth Sörensen, 2008-06-17 One of the keystones in practical metaheuristic problem solving is the fact that tuning the optimization technique to the problem under consideration is crucial for achieving top performance This tuning customization is usually in the hands of the algorithm designer and despite some methodological attempts it largely remains a scientific art Transferring a part of this customization effort to the algorithm itself endowing it with smart mechanisms to self adapt to the problem has been a long pursued goal in the field of metaheuristics These mechanisms can involve different aspects of the algorithm such as for example self adjusting the parameters self adapting the functioning of internal components evolving search strategies etc Recently the idea of hyperheuristics i.e. using a metaheuristic layer for adapting the search by selectively using different low level heuristics has also been gaining popularity This volume presents recent advances in the area of adaptativeness in metaheuristic optimization including up to date
