Landslide Hazard And Risk:

Landslide Hazard and Risk Thomas Glade, Malcolm G. Anderson, Michael J. Crozier, 2006-01-04 With the increasing need to take an holistic view of landslide hazard and risk this book overviews the concept of risk research and addresses the sociological and psychological issues resulting from landslides Its integrated approach offers understanding and ability for concerned organisations landowners land managers insurance companies and researchers to develop risk management solutions Global case studies illustrate a variety of integrated approaches and a concluding section provides specifications and contexts for the next generation of process models

Landslide Risk Management Oldrich Hungr, Robin Fell, Rejean Couture, Erik Eberhardt, 2005-06-30 Landslide Risk Management comprises the proceedings of the International Conference on Landslide Risk Management held in Vancouver Canada from May 31 to June 3 2005 The first part of the book contains state of the art and invited lectures prepared by teams of authors selected for their experience in specific topics assigned to them by the JTC

Landslide Risk Assessment E. Mark Lee, David K. C. Jones, 2004 Over the past decade there has been a gradual shift away from simply relying on engineering solutions to individual landslide problems to the use of a variety of strategies to manage the problems over a broad area Such alternative strategies include the use of building codes land use planning controls preventing water leakage early warning systems and insurance schemes This book addresses these developments and provides a multidisciplinary perspective on landslide management

Landslide Hazards, Risks, and Disasters Tim Davies, 2014-10-23 Landslides are the most costly geo hazard in the world and they re often the cause or the result of other hazards and disasters such as tsunamis earthquakes wildfires and volcanic eruptions Landslide Hazards Risks and Disasters makes a close and detailed examination of major mass movements and provides measures for more thorough and accurate monitoring prediction preparedness and prevention It takes a geoscientific approach to the topic while also discussing the impacts human induced causes such as deforestation blasting and building construction underscoring the multi disciplinary nature of the topic Contains contributions from expert geologists seismologists geophysicists and environmental scientists selected by a world renowned editorial board Presents the latest research on causality economic impacts fatality rates and landslide and problem soil preparedness and mitigation Numerous tables maps diagrams illustrations photographs and video captures of hazardous processes Discusses steps for prevention and treatment of problem soils the most expensive geo hazard in the world

Landslide Hazard and Risk Assessment Fausto Guzzetti, 2006

Landslide Risk Assessment David Cruden, 2018-05-02 The 25 papers collected together in this volume present comprehensive coverage of all major aspects of landslide risk assessment including the risk assessment framework and methods for estimating probability of landsliding vulnerability and risk

Partnerships for Reducing Landslide Risk National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on the Review of the National Landslide Hazards Mitigation Strategy, 2004-03-15 Landslides occur in all geographic regions of the nation in

response to a wide range of conditions and triggering processes that include storms earthquakes and human activities Landslides in the United States result in an estimated average of 25 to 50 deaths annually and cost 1 to 3 billion per year In addition to direct losses landslides also cause significant environmental damage and societal disruption Partnerships for Reducing Landslide Risk reviews the U S Geological Survey's USGS National Landslide Hazards Mitigation Strategy which was created in response to a congressional directive for a national approach to reducing losses from landslides Components of the strategy include basic research activities improved public policy measures and enhanced mitigation of landslides This report commends the USGS for creating a national approach based on partnerships with federal state local and non governmental entities and finds that the plan components are the essential elements of a national strategy Partnerships for Reducing Landslide Risk recommends that the plan should promote the use of risk analysis techniques and should play a vital role in evaluating methods setting standards and advancing procedures and guidelines for landslide hazard maps and assessments This report suggests that substantially increased funding will be required to implement a national landslide mitigation program and that as part of a 10 year program the funding mix should transition from research and guideline development to partnership based implementation of loss reduction measures

Landslides Yuanzhi Zhang, Qiuming Cheng, 2022-09-28 In recent years landslides and their impacts have drawn increasing awareness globally regionally and locally Landslides as catastrophic events can cause

human injury loss of life and economic devastation as well as destroy infrastructures and cultural and natural heritage New technologies including interferometric synthetic aperture radar InSAR and geographic information systems GIS are being thoroughly adopted and applied to dynamic and process monitoring and modelling of coal mine and marine landslides land subsidence and tsunami landslides These technologies are also being used for hazard mapping and assessment early warning and evacuation and regional or local landslide mitigation This book discusses these topics and more **RISK21 - Coping**

with Risks due to Natural Hazards in the 21st Century Walter J. Ammann, Stefanie Dannenmann, Laurent Vulliet, 2006-08-17 Over the last two decades there has been an increase in the number of natural hazards which have culminated in catastrophic consequences severely impacting on people and livelihoods In response to this escalation the Swiss Natural Hazards Competence Centre CENAT organized a workshop entitled RISK21 at the Centro Stefano Franscini Mon **Landslides and Engineered Slopes. Experience, Theory and Practice** Stefano Aversa, Leonardo

Cascini, Luciano Picarelli, Claudio Scavia, 2018-04-17 Landslides and Engineered Slopes Experience Theory and Practice contains the invited lectures and all papers presented at the 12th International Symposium on Landslides Naples Italy 12 19 June 2016 The book aims to emphasize the relationship between landslides and other natural hazards Hence three of the main sessions focus on Volcanic induced landslides Earthquake induced landslides and Weather induced landslides respectively while the fourth main session deals with Human induced landslides Some papers presented in a special session devoted to Subareal and submarine landslide processes and hazard and in a Young Session complete the books Landslides and Engineered Slopes Experience Theory and Practice underlines the importance of the classic approach of modern science which moves from experience to theory as the basic instrument to study landslides Experience is the key to understand the natural phenomena focusing on all the factors that play a major role Theory is the instrument to manage the data provided by experience following a mathematical approach this allows not only to clarify the nature and the deep causes of phenomena but mostly to predict future and if required manage similar events Practical benefits from the results of theory to protect people and man made works Landslides and Engineered Slopes Experience Theory and Practice is useful to scientists and practitioners working in the areas of rock and soil mechanics geotechnical engineering engineering geology and geology

Landslide Hazard and Risk Mapping Using Remote Sensing and Gis Techniques Anas Nawaf Alaragdeh, 2011-09-01 Landslides represent one of the most common geo hazards that affect the steep lands and may destroy crop lands as well as urban and industrial development Landslide risk analysis can help government agencies to select suitable locations for development schemes and plan mitigation measures in unstable landslide prone areas as well provide conservation areas to protect county development The study describes an approach for assessing the landslide risk potentials as well present method of calculating the Landslide factors influence distribution map which comes helpful in engineering conservation plans to protect investment in a particular area In this study two factors rainfall and slope were taken as subject of landslide geo

hazard The study shows that remote sensing techniques when integrate with GIS can provide a useful tool to study potential landslide area The result shows a landslides map that presents different level of risk in five categories of classification The very high risk area covers approximately 0 21% of the total area In addition influences of each rainfall and the slope show that rainfall has much influence than slope effect on very high level of ha

Geomorphological Hazards and Disaster Prevention Irasema Alcántara-Ayala,Andrew S. Goudie,2010-03-04 Human activities have had a huge impact on the environment and landscape through industrialisation and land use change leading to climate change deforestation desertification land degradation and air and water pollution These impacts are strongly linked to the occurrence of geomorphological hazards such as floods landslides snow avalanches soil erosion and others Geomorphological work includes not only the understanding but the mapping and modelling of Earth s surface processes many of which directly affect human societies In addition geomorphologists are becoming increasingly involved with the dimensions of societal problem solving through vulnerability analysis hazard and risk assessment and management The work of geomorphologists is therefore of prime importance for disaster prevention An international team of geomorphologists have contributed their expertise to this volume making this a scientifically rigorous work for a wide audience of geomorphologists and other Earth scientists including those involved in environmental science hazard and risk assessment management and policy
