Language And Thought In Normal And Handicapped Children:

Language and Thought in Normal and Handicapped Children Richard F. Cromer, 1991-01-01 **Children's Reasoning and the Mind** Peter Mitchell, Kevin Riggs, 2014-06-03 This fresh and dynamic book offers a thorough investigation into the development of the cognitive processes that underpin judgements about mental states often termed theory of mind and addresses specific issues that have not been adequately dealt with in the past and which are now being raised by some of the most prominent researchers in the field *Differential Diagnosis and Treatment of Children with Speech Disorder* Barbara Dodd, 2013-05-30 Paediatric speech and language therapists are challenged by diminished resources and increasingly complex caseloads The new edition addresses their concerns Norms for speech development are given differentiating between the emergence of the ability to produce speech sounds articulation and typical developmental error patterns phonology The incidence of speech disorders is described for one UK service providing crucial information for service management The efficacy of service provision is evaluated to show that differential diagnosis and treatment is effective for children with disordered speech Exploration of that data provides implications for prioritising case loads The relationship between speech and language disorders is examined in the context of clinical decisions about what to target in therapy New chapters provide detailed intervention programmes for subgroups of speech disorder delayed development use of atypical error patterns inconsistent errors and development verbal dyspraxia The final section of the book deals with special populations children with cognitive impairment hearing and auditory processing difficulties The needs of clinicians working with bilingual populations are discussed and ways of intervention described The final chapter examines the relationship between spoken and written disorders of phonology *Other Children, Other Languages* Yonata Levy, 2013-05-13 This volume investigates the implications of the study of populations other than educated middle class normal children and languages other than English on a universal theory of language acquisition Because the authors represent different theoretical orientations their contributions permit the reader to appreciate the full spectrum of language acquisition research Emphasis is placed on the principle ways in which data from pathology and from a variety of languages may affect universal statements The contributors confront some of the major theoretical issues in acquisition **Subjects of Experience** E. J. Lowe, 1996-02-15 In this innovative study of the relationship between persons and their bodies E J Lowe demonstrates the inadequacy of physicalism even in its mildest non reductionist guises as a basis for a scientifically and philosophically acceptable account of human beings as subjects of experience thought and action He defends a substantial theory of the self as an enduring and irreducible entity a theory which is unashamably committed to a distinctly non Cartesian dualism of self and body Taking up the physicalist challenge to any robust form of psychophysical interactionism he shows how an attribution of independent causal powers to the mental states of human subjects is perfectly consistent with a thoroughly naturalistic world view He concludes his study by examining in detail the role which conscious mental states play

in the human subject's exercise of its most central capacities for perception action thought and self knowledge Child Psychology in Action John Harris, 2017-09-18 Originally published in 1986 there was a divorce between the immense amount of research taking place in child psychology and the real world of professional carers or teachers working with children at the time The aim of this book was therefore to examine the relationship between research and practice in order to promote links between the two The discussions are wide ranging and the book will be of interest to many groups of readers These include 1 developmental psychologists and others involved in applied research with children and their families 2 those involved in training professionals such as teachers social workers and speech therapists who will work with children 3 educational and clinical psychologists whose work involves psychological intervention with children and their caretakers and 4 students of educational or child psychology **DHEW Publication No. (OE).**, 1978 *Handbook of Cognitive, Social, and Neuropsychological Aspects of Learning Disabilities* Stephen J. Ceci, 2013-01-11 Recognized as the definitive reference in the field this book addresses a broad range of biologically based disorders that affect children's learning and development Leading authorities review the genetics of each disorder its course and outcome associated developmental cognitive and psychosocial challenges and what clinicians and educators need to know about effective approaches to assessment and intervention Coverage encompasses numerous lower incidence neurodevelopmental disabilities as well as more frequently diagnosed learning and behavior problems with a genetic component *Know Your Child* Stella Chess, Alexander Thomas, 1987-05-30 Two renowned psychiatrists offer reassuring wisdom and solid practical information on raising children from infancy through adolescence **Disordered Thinking and Communication in Children** Mahin Hassibi, 1980-12-31 *Learning, Speech and Thought in the Mentally Retarded* A. D. B. Clarke, M. M. Lewis, 2014-05-19 Learning Speech and Thought in the Mentally Retarded contains the proceedings of Symposia 4 and 5 held at the Middlesex Hospital Medical School in London on October 31 1969 and March 20 1970 respectively under the auspices of the Institute for Research into Mental Retardation This monograph presents topical problems in mental retardation with emphasis on learning processes speech and thought The application of operant learning techniques to the development of language in the retarded is highlighted This book is comprised of four chapters and begins by outlining directions in research on learning deficits followed by a discussion on teaching processes in the care of severely retarded children The next chapter deals with speech and thought in the mentally retarded with particular reference to two basic problems the relative priority of language or thought and the selection processes underlying language The final chapter explores language delay and language deviation in mentally retarded children Throughout the book the focus is on language its nature its development in the constitutionally normal and handicapped some theoretical controversies among experts in this field and the development of appropriate techniques for teaching language to the mentally retarded This monograph will be useful to psychologists and clinicians working in the field of mental retardation Children With Handicaps Gershon Berkson, 2013-06-17 Psychological research

on children with mental and physical handicaps began two hundred years ago Its major development awaited the maturation of psychology as an empirical science and of social movements for child welfare and education This book is a record of the research accomplished in the 1980s While at the end of the 19th century behavioral research on handicapped children could at best be characterized as pioneering by the beginning of the 1990s it had become a vigorous activity with scientists producing hundreds of articles a year The result has been a level of detail in theory and factual support that was not previously available This volume is written for those who know something about psychology and education but who are unfamiliar with research on children with handicaps This might include parents of children with handicaps upper level undergraduate and graduate students looking for research topics and professionals in developmental psychology and the education of normal children who wish to familiarize themselves with the recent developments in the study of deviations in behavioral development
