Language Universals and Linguistic Typology Bernard Comrie, 1989 *Language Typology and Language Universals* Martin Haspelmath, 2001 This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied to specific languages but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction For classic linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation To attain these objectives the series will aim for a standard comparable to that of the leading handbooks in other disciplines and to this end will strive for comprehensiveness theoretical explicitness reliable documentation of data and findings and up to date methodology The editors both of the series and of the individual volumes and the individual contributors are committed to this aim The languages of publication are English German and French The main aim of the series is to provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks however no inflexible pre set limits will be imposed on the scope of each volume The series is open ended and can thus take account of further developments in the field This conception coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care means that there is no set time table for the publication of the whole series Each volume will be a self contained work complete in itself The order in which the handbooks are published does not imply any rank ordering but is determined by the way in which the series is organized the editor of the whole series enlist a competent editor for each individual volume Once the principal editor for a volume has been found he or she then has a completely free hand in the choice of co editors and contributors The editors plan each volume independently of the others being governed only by general formal principles The series editor only intervene where questions of delineation between individual volumes are concerned It is felt that this modus operandi is best suited to achieving the objectives of the series namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume

This textbook provides a critical introduction to major research topics and current approaches in linguistic typology the study of structural variation in human language and of the limits on that variation Jae Jung Song draws on a wide range of cross linguistic data to describe what linguistic typology has revealed both about language in general and about the rich variety of ways in which meaning and expression are achieved in the world s languages Following an introduction to the subject matter and its history the first part of the book explores theoretical issues and approaches as well as practical considerations such as sampling methods and data collection In the second part chapters examine variation in particular phenomena such as word order case alignment and evidentiality marking Each chapter concludes with study questions and suggestions for further reading The volume will be suitable for undergraduate and graduate students in the fields of linguistic typology and language universals and as secondary reading for cross linguistically focused courses in phonology morphology syntax and semantics *Universals of Language Today* Sergio Scalise, Elisabetta Magni, Antonietta Bisetto, 2008-10-11

detail Defining Language Universals Bianca Stärk, 2006-11-20 Studienarbeit aus dem Jahr 2004 im Fachbereich Anglistik Linguistik Note 2,8 Universität zu Köln Anglistisches Institut Veranstaltung Morphosyntax English German Sprache Deutsch
 Abstract Language is something uniquely human Bertrand Russell stated in 1948 that a dog cannot relate his autobiography however eloquently he may bark he cannot tell you that his parents were honest though poor Whaley 1997:4 Language is not only unique to humans and diverse but there are also commonalities between languages About five thousand languages are spoken in the world today but there still is a basic unity that underlies their diversities Many of the world's languages show similar principles An example of such a similarity is word order In some languages such as English French and Italian the word order is subject verb and object This is the so-called SOV order Besides similarities like this there also exist features between some languages which are common to all human languages in the world and are called language universals These language universals classify entire languages into categories which are then based on shared properties Language universals are examined within the field of typology Typology has the task of examining cross-linguistic patterns This means that all typological research is based on comparisons between languages Whaley 1997:7 Through comparing different languages with each other one necessarily comes into contact with universals which hold true for a group of languages or even for all languages This is how language universals are placed within the field of typology

Rethinking Universals Jan Wohlgemuth, Michael Cysouw, 2010 Rarissima and rara features and properties found only in one or very few languages tell us as much about the capacities and limits of human languages as do universals Explaining the existence of such rare phenomena on the one hand and the fact

Language Universals Morten H. Christiansen Professor of Psychology Cornell University, Christopher Collins Professor of Linguistics Cornell University, Shimon Edelman Professor of Psychology Cornell University, 2007-04-01 Languages differ from one another in bewildering and seemingly arbitrary ways For example in English the verb precedes the direct object understand the proof but in Japanese the direct object comes first In some languages such as Mohawk it is not even possible to establish a basic word order Nonetheless languages do share certain regularities in how they are structured and used The exact nature and extent of these language universals has been the focus of much research and is one of the central explanatory goals in the language sciences During the past 50 years there has been tremendous progress a few major conceptual revolutions and even the emergence of entirely new fields The wealth of findings and theories offered by the various language science disciplines has made it more important than ever to work toward an integrated understanding of the nature of human language universals This book is the first to examine language universals from a cross-disciplinary perspective It provides new insights into long-standing questions such as What exactly defines the human capacity for language Are there universal properties of human languages and if so what are they Can all language universals be explained in the same way or do some universals require different kinds of explanations from others Language Universals is unique in starting with the assumption that the best way to approach these and related questions is

through a dialogue between a wide range of disciplines including linguistics cognitive neuroscience philosophy computer science and biology

Language Universals and Second Language Acquisition William E. Rutherford, 1984-01-01 This volume consists of papers presented at the Conference on Language Universals and Second Language Acquisition University of Southern California February 1982 Published with the papers are the remarks of the originally assigned discussants The collection represents an important cross fertilization between research in grammatical theory and in second language acquisition Topics dealt with in a number of the papers include word order markedness core grammar accessibility hierarchies and simplified registers The range of universals discussed embraces phonology syntax semantics and discourse Universals are also considered with reference to ontology psychological reality and evaluation metrics

Language Universals and Linguistic Typology, 1981 *An Introduction to Linguistic Typology* Viveka Velupillai, 2012-08-08 This clear and accessible introduction to linguistic typology covers all linguistic domains from phonology and morphology over parts of speech the NP and the VP to simple and complex clauses pragmatics and language change There is also a discussion on methodological issues in typology This textbook is the first introduction that consistently applies the findings of the World Atlas of Language Structures systematically includes pidgin and creole languages and devotes a section to sign languages in each chapter All chapters contain numerous illustrative examples and specific feature maps Keywords and exercises help review the main topics of each chapter Appendices provide macro data for all the languages cited in the book as well as a list of web sites of typological interest An extensive glossary gives at a glance definitions of the terms used in the book This introduction is designed for students of courses with a focus on language diversity and typology as well as typologically oriented courses in morphology and syntax The book will also serve as a guide for field linguists

Linguistic Universals and Language Change Jeff Good, 2008-01-24 In this book leading scholars examine and assess rival explanations for linguistic universals and the effectiveness of different models of language change They illustrate their arguments with a very wide range of reference to the world's languages

Approaches to Language Typology Masayoshi Shibatani, Theodora Bynon, 1999 What do all languages have in common and what gives each language its individuality Language typology which has developed in response to these fundamental questions is concerned with the construction of theoretical frameworks capable of delimiting the range of possible human languages and of capturing constraints on cross linguistic variation Language typology is a major concern of all contemporary schools of linguistics yet a coherent image of the field is difficult to form because of the diversity of theoretical orientations and practical methodologies This collection brings together for the first time original contributions from major schools of typological research from the Prague School to the Generative Grammar tradition Leading scholars offer first hand accounts of the theoretical foundations and substantive findings of their particular school of thought clarifying basic assumptions which are often not explicitly stated in the literature The collection as a whole provides both a survey of the place of individual typological schools in the historiography of the subject and a

comprehensive account of the present state of language typology in an international context It gives an overview of both the underlying unity of and the differences in the methods employed in the field Linguistic Typology Jae Jung Song,2014-09-15 Language typology is the study of the structural similarities between languages regardless of their history to establish a classification or typology of languages It is a core topic of historical linguistics and is studied on all traditional linguistics degree courses In recent years there has been increased interest the subject and it is an area we have been looking to commission a book in Jae Jung Song proposes to introduce the undergraduate reader to the subject with discussion of topics which include what is language typology and why is it studied word order language sampling relative clauses diachronic typology and applications of language typology There will also be discussion of the most prominent areas of research in the subject and readers will be able to review data selected from a wide range of languages to see how languages work and how differently they behave **Language Universals** Joseph Harold Greenberg,2005 Greenberg s Language Universals is typical of his typological theoretical work in its stunning originality Starting out from the observations underlying Praguian markedness Greenberg contributes a mass of new data and generalizations and lays the foundations for a post structuralist usage based theory of grammatical asymmetries This work will continue to be influential for many years to come **Typology and Universals** William Croft,2003 A thorough rewriting to reflect advances in typology and universals in the past decade **Language Universals Research** Hansjakob Seiler,2000
