Both SLPs and researchers must understand speech and language developments in children, and SLPs also need reliable assessment and intervention approaches for serving bilingual children with language disorders. This comprehensive text is one of the few to offer readers in depth theoretical and practical information on these timely topics. It brings together more than a dozen top researchers to present developmental data, best assessment practices, and appropriate intervention approaches in the following areas: language processing skills, lexical development, morpho-syntactic development, first language loss, grammatical impairments, semantic development, phonological development, and disorders, narrative development, and disorders of fluency. It also includes language intervention for bilingual speakers. The chapter outlines the major purposes of intervention for bilingual children with speech and language disorders, explores the debate over which language SLPs should use with bilingual children, and examines ways to promote gains in both languages. With this research-based text, SLPs will understand the complexity of language development in bilingual children and learn appropriate assessment and intervention approaches.

Nippold, 2014-03-26 This volume presents the findings of a large scale study of individual differences in spoken and heard language development during the school years The goal of the study was to investigate the degree to which language abilities at school entry were stable over time and influential in the child s overall success in important aspects of development The methodology was a longitudinal study of over 600 children in the US Midwest during a 10 year period The language skills of these children along with reading academic and psychosocial outcomes were measured There was intentional oversampling of children with poor language ability without being associated with other developmental or sensory disorders Furthermore these children could be sub grouped based on their nonverbal abilities such that one group represents children with specific language impairment SLI and the other group with nonspecific language impairment NLI represents poor language along with depressed nonverbal abilities Throughout the book the authors consider whether these distinctions are supported by evidence obtained in this study and which aspects of development are impacted by poor language ability Data are provided that allow conclusions to be made regarding the level of risk associated with different degrees of poor language and whether this risk should be viewed as lying on a continuum The volume will appeal to researchers and professionals with an interest in children s language development particularly those working with children who have a range of language impairments This includes Speech and Language Pathologists Child Neuropsychologists Clinical Psychologists working in Education as well as Psycholinguists and Developmental Psychologists      Language Development and Developmental Language Disorder Peter

**New Directions In Language Development And Disorders** Michael Perkins, Sara Howard, 2012-12-06 Research into child language development is being conducted more extensively by more people and in more countries throughout the world than at any point in the past We now know more than we ever did before about the linguistic cognitive neurobio logical and social capacities that children bring to their language learning task as well as the ways in which these capacities interact with a whole range of factors present in the child s environment throughout the learning process not least the particular character istics of the language or languages to which the child is exposed Far from inducing a sense of complacency this new knowledge seems instead to create an even stronger impetus to know more This is partly because of the new and unforeseen questions it raises and partly because of competition between different theories to provide the best explanation of the phenomenon and which in turn engender different methods of enquiry This volume addresses many of the key issues which are currently exercising the minds of child language researchers and which are likely to motivate research for some years to come The chapters included here all previously unpublished present a great deal of new data and address a range of theoretical issues from a variety of perspectives
