**Prototyping** Reinhard Budde, Karlheinz Kautz, Karin Kuhlenkamp, Heinz Züllighoven, 2012-12-06 Prototyping is an approach used in evolutionary system development In this book the authors show which forms of prototyping can be employed to tackle which problems They take a look at the tools used in everyday software development with a view to determining their suitability for prototyping and attempt to elucidate prototyping as a methodological concept Part I of the book looks at prototyping as an approach for constructing and evaluating models Traditional approaches and phase oriented life cycle plans are discussed Prototyping overcomes fundamental problems associated with life cycle plans The authors present their own concept of evolutionary system development Part II shows to what extent technical support of evolutionary system development is possible Various tools for supporting prototyping are discussed and prospective trends are indicated Criteria are listed to help the reader choose between the various development environments currently available or likely to become available in the near future Case studies are used to illustrate how prototype construction can be integrated in software projects

**Prototyping-Oriented Software Development** Walter R. Bischofberger, Gustav Pomberger, 2012-12-06 This book is intended for anyone who plans designs and implements software systems for anyone who is involved with quality assurance and hence for anyone who is interested in the practicability of modern concepts methods and tools in the software development process The book aims at software engineers and at students with specialized interests in the area of software engineering The reader is expected to be familiar with the fundamental concepts of software engineering In writing the book the authors tap years of experience in industrial projects and research work in the development of methods and tools that support the software development process Perhaps now more than ever the buzzword software crisis serves to alert us that software systems are often error prone that significant difficulties arise in mastering complexity in the production of software systems and that the acceptance and adequacy of software products is significantly lower than is the case with other technical products The following goals have been suggested for the improvement of the software development process exact fulfillment of user requirements increased reliability and robustness greater modularity of both the development process and the product simple and adequate operation i e better ergonomics easy maintainability and extensibility cost effective portability increased reusability of software components reduced costs for production operation and maintenance VI Preface Research and development work in the area of software engineering has increased dramatically in recent years

**Contracts, Scenarios and Prototypes** Reinhold Ploesch, 2011-06-27 What is this Book About At the beginning of the 21st century computer systems and especially so ware play an important role in our society Software is contained in virtually every technical device that we use in everyday life e g cellular phones and cars Furthermore computers and their software are used for leisure purposes at home the Internet and computer games at the office e g writing letters and order processing and for more complicated tasks such as controlling steel plants or insuring flight safety Therefore the quality of software e g its correctness re ability and efficiency has become important not only in the context of critical systems e g nuclear power plants but also for our entire society from business to leisure Software engineering is the practical application of scientific knowledge for the economical production and use of high quality software Pomberger<sup>96</sup> The discipline aims at developing methods techniques tools and standards to fulfill these aims The number of methods and tools available to the software engineer nowadays is overwhelming nevertheless many software projects fail that is do not meet their schedules are over budget do not meet the user needs or simply have considerable quality defects The numerous possible explanations for this situation include poor project management unsuitable methods and tools used in the project and poorly developed skills of the participating software engineers

**The Impact Of Case Technology On Software Processes** Daniel E Cooke, 1994-03-07 This review volume consists of articles concerning CASE technology and research as discussed from two perspectives For the most part the available CASE technology is intended to automate certain phases of the software development life cycle The book contains articles which focus on how the current technology alters the nature of software engineering efforts Papers which delve into the knowledge a software engineer needs to possess and how the software engineer s work content has or may change are included Cultural as well as technical considerations are discussed The current CASE technology exists to automate phases of the software development life cycle thus affecting software development in the short term but we cannot ignore the CASE research efforts toward a higher generation language Such a language should affect software development in the long term Papers suggesting how these languages may alter the nature of software engineering in the future are presented

**Rapid Development** Steve McConnell, 1996 Project managers technical leads and Windows programmers throughout the industry share an important concern how to get their development schedules under control Rapid Development addresses that concern head on with

philosophy techniques and tools that help shrink and control development schedules and keep projects moving The style is friendly and conversational and the content is impressive

**Software Composition** Cesare Pautasso, Éric Tanter, 2008-03-13 The goal of the International Symposia on Software Composition is to advance the state of the research in component based software development We focus on the challenges related to component development reuse verification and of course composition

Software composition is becoming more and more important as innovation in software engineering shifts from the development of individual components to their reuse and recombination in novel ways To this end for the 2008 edition researchers were solicited to contribute on topics related to component adaptation techniques composition languages calculi and type systems as well as emerging composition techniques such as aspect oriented programming service oriented architectures and mashups In line with previous editions of SC contributions were sought focusing on both theory and practice with a particular interest in efforts relating them This LNCS volume contains the proceedings of the 7th International Symposium on Software Composition which was held on March 29-30 2008 as a satellite event of the European Joint Conferences on Theory and Practice of Software ETAPS in Budapest Hungary We received 90 initial submissions from all over the world out of which 70 were considered for evaluation by a Program Committee consisting of 30 international experts Among these submissions we selected 13 long papers and 6 short papers to be included in the proceedings and presented at the conference Each paper went through a thorough revision process and was reviewed by three to five reviewers This ensured the necessary quality for

publishing these proceedings in time for the event a first in the history of the symposium      Concise Encyclopedia of Computer Science Edwin D. **Software Engineering - ESEC/FSE '99** Oskar Nierstrasz, Michel Lemoine, 2003-05-21 For the second time the European Software Engineering Conference is being held jointly with the ACM SIGSOFT Symposium on the Foundations of Software Engineering FSE Although the two conferences have different origins and traditions there is a significant overlap in intent and subject matter Holding the conferences jointly when they are held in Europe helps to make these thematic links more explicit and encourages researchers and practitioners to attend and submit papers to both events The ESEC proceedings have traditionally been published by Springer Verlag as they are again this year but by special arrangement the proceedings will be distributed to members of ACM SIGSOFT as is usually the case for FSE ESEC FSE is being held as a single event rather than as a pair of colocated events Submitted papers were therefore evaluated by a single program committee ESEC FSE represents a broad range of software engineering topics in mainly two continents and consequently the program committee members were selected to represent a spectrum of both traditional and emerging software engineering topics A total of 141 papers were submitted from around the globe Of these nearly half were classified as research papers quarter as experience papers and the rest as both research and experience papers Twenty nine papers from five continents were selected for presentation and inclusion in the proceedings Due to the large number of industrial experience reports submitted we have also introduced this year two sessions on short case study presentations      **Next Generation CASE Tools** Kalle Lyytinen, V.-P. Tahvanainen, 1992 CASE tools have rapidly gained popularity both as a research topic and in practical information systems work This collection of articles from some of the foremost researchers in the field provides an overview of what is currently happening in CASE research and what CASE environments of the future may look like
