Hunt, Juergen R.

Gadau,2017-01-27 Social insects are among the most successful and ecologically important animals on earth The lifestyle of these insects has fascinated humans since prehistoric times These species evolved a caste of workers that in most cases have no progeny Some social insects have worker sub castes that are morphologically specialized for discrete tasks The organization of the social insect colony has been compared to the metazoan body Males in the order Hymenoptera bees ants and wasps are haploid a situation which results in higher relatedness between female siblings Sociality evolved many times within the Hymenoptera perhaps spurred in part by increased relatedness that increases inclusive fitness benefits to workers cooperating to raise their sisters and brothers rather than reproducing themselves But epigenetic processes may also have contributed to the evolution of sociality The Hymenoptera provide opportunities for comparative study of species ranging from solitary to highly social A more ancient clade of social insects the termites infraorder Isoptera provide an opportunity to study alternative mechanisms of caste determination and lifestyles that are aided by an array of endosymbionts This research topic explores the use of genome sequence data and genomic techniques to help us explore how sociality evolved in insects how epigenetic processes enable phenotypic plasticity and the mechanisms behind whether a female will become a queen or a worker

**Fish biology in Japan: an anthology in honour of Hiroya Kawanabe** Masahide Yuma,Izumi Nakamura,Kurt D. Fausch,2013-04-17 This volume is a collection of papers assembled to honor Hiroya Kawanabe an eminent Japanese ecologist who studied fishes and other organisms Kawanabe retired from his position as Professor at Kyoto University in March 1996 In the first section of the volume his career is highlighted by a biography describing his life and work a bibliography of his more than 750 lifetime publications and a personal interview with a colleague who has been close to his work throughout his career Papers in the second section of the volume include invited reviews of research on fish ecology in Japan a historical overview of freshwater fishes of Japan and recent studies on sex change among reef fishes The 24 papers in the third section of the volume by Japanese fish biologists and their collaborators cover a wide variety of topics on fish biology These include papers on evolution genetics systematics reproductive biology early life history life history variation behavior physiology ecology and zoogeography These papers address fishes from lentic lotic and marine ecosystems in Japan Asia Africa North America and in some cases worldwide One of Hiroya Kawanabe s most brilliant and lasting contributions was to foster collaboration between Japanese ecologists and other scientists

**The Evolution of Social Behavior in Insects and Arachnids** Jae C. Choe,Bernard J. Crespi,1997 Social insects and arachnids exhibit complex forms of behavior that involve cooperation in building a nest defending against attackers or rearing offspring This book is a comprehensive up to date guide to sociality and its evolution in a wide range of taxa [Microbial Drivers of Sociality - from Multicellularity to Animal Societies](#) Dino McMahon,Peter H. W. Biedermann,Marko Rohlf,Joël Meunier,2021-10-13 *Gorilla Society*

Alexander H. Harcourt,Kelly J. Stewart,2008-09-15 Societies develop as a result of the interactions of individuals as they compete and cooperate with one another in the evolutionary struggle to survive and reproduce successfully Gorilla society is

arranged according to these different and sometimes conflicting evolutionary goals of the sexes In seeking to understand why gorilla society exists as it does Alexander H Harcourt and Kelly J Stewart bring together extensive data on wild gorillas collected over decades by numerous researchers working in diverse habitats across Africa to illustrate how the social system of gorillas has evolved and endured Gorilla Society introduces recent theories explaining primate societies describes gorilla life history ecology and social systems and explores both sexes evolutionary strategies of survival and reproduction With a focus on the future Harcourt and Stewart conclude with suggestions for future research and conservation An exemplary work of socioecology from two of the world s best known gorilla biologists Gorilla Society will be a landmark study on a par with the work of George Schaller a synthesis of existing research on these remarkable animals and the societies in which they live

**Ichnoentomology** Jorge Fernando Genise, 2016-10-31 This book is devoted to the ichnology of insects and associated trace fossils in soils and paleosols The traces described here mostly nests and pupation chambers include one of the most complex architectures produced by animals Chapters explore the walls shapes and fillings of trace fossils followed by their classifications and ichnotaxonomy Detailed descriptions and interpretations for different groups of insects like bees ants termites dung beetles and wasps are also provided Chapters also highlight the paleoenvironmental significance of insect trace fossils in paleosols for paleontological reconstructions sedimentological interpretation and ichnofabrics analysis Readers will discover how insect trace fossils act as physical evidence for reconstructing the evolution of behavior phylogenies past geographical distributions and to know how insects achieved some of the more complex architectures The book will appeal to researchers and graduate students in ichnology sedimentology paleopedology and entomology and readers interested in insect architecture

**Conserving Biodiversity** National Research Council, Board on Science and Technology for International Development, 1992-02-01 The loss of the earth s biological diversity is widely recognized as a critical environmental problem That loss is most severe in developing countries where the conditions of human existence are most difficult Conserving Biodiversity presents an agenda for research that can provide information to formulate policy and design conservation programs in the Third World The book includes discussions of research needs in the biological sciences as well as economics and anthropology areas of critical importance to conservation and sustainable development Although specifically directed toward development agencies non governmental organizations and decisionmakers in developing nations this volume should be of interest to all who are involved in the conservation of biological diversity

*Dispersing Primate Females* Takeshi Furuichi, Juichi Yamagiwa, Filippo Aureli, 2015-06-05 Why do females in male philopatric species seem to show larger variation in their life history strategies than males in female philopatric species Why did females in human societies come to show enormous variation in the patterns of marriage residence and mating activities To tackle these important questions this book presents the latest knowledge about the dispersing females in male philopatric non human primates and in human societies The non human primates that are covered include muriquis spider monkeys woolly monkeys

gorillas chimpanzees bonobos and some species of colobine monkeys In these non human primate species females typically leave their natal group before sexual maturation and start reproduction in other groups into which they immigrate However there is a large variation as some females may breed in their natal group with some risks of inbreeding with their male relatives and some females may associate with males of multiple groups at the same time after leaving their natal group Such variation seems to provide better strategies for reproduction depending on local circumstances Although knowledge about female dispersal patterns and life history is indispensable for understanding the dynamic structure of primate societies it is still not known how females behave after leaving their natal groups how many groups they visit before finally settling down and which kinds of groups they choose to immigrate into due to the large variation and flexibility and the difficulty of tracking females after natal dispersal To encourage further progress in this important field this volume provides new insights on evolution of female dispersal by describing factors influencing variations in the dispersal pattern across primates and a hypothesis for the formation of human families from the perspectives of female life history This book is recommended reading for researchers and students in primatology anthropology animal behavior and evolution and for anyone interested in primate societies and human evolution

**Gorilla Biology** Andrea B. Taylor, Michele L. Goldsmith, 2002-12-05 Gorillas are one of our closest living relatives are the largest living primate yet are perhaps the most misunderstood great ape Teetering on the brink of extinction they are also of increasing conservation concern Gorilla Biology is the first comparative perspective on gorilla populations throughout their range

**Primate Males** Peter M. Kappeler, 2000-05-04 The size and

composition of primate groups varies tremendously across species within species and within groups over time The most variable quantity is the number of adult males In some groups single males can monopolize access to several females whereas reproduction is shared among several males in other groups This variation lies at the heart of understanding adaptive variation among social systems Whether groups contain single or multiple males has important consequences for reproductive strategies of both sexes and also shapes these animals morphology and behaviour Written by leading authorities this book provides an extensive overview of variation in group composition across all major primate taxa using up to date reviews case studies evolutionary theory and theoretical models setting primates into context with birds and other mammals It will become a firm favorite with all those interested in the behavioural ecology of primates *Microbial Technology* Rajni Gupta,2001

**Primate Behavioral Ecology** Karen B. Strier,2015-07-22 Primate Behavioral Ecology described as an engaging cutting edge exposition incorporates exciting new discoveries and the most up to date approaches in its introduction to the field and its applications of behavioral ecology to primate conservation This unique comprehensive single authored text integrates the basics of evolutionary ecological and demographic perspectives with contemporary noninvasive molecular and hormonal techniques to understand how different primates behave and the significance of these insights for primate conservation Examples are drawn from the classic primate field studies and more recent studies on previously neglected species from across the primate order illustrating the vast behavioral variation that we now know exists and the gaps in our knowledge that future studies will fill **Trees, Crops, and Soil Fertility** G. Schroth,Fergus L.

Sinclair,2003-02-19 Annotation Successful agroforestry requires an understanding of the complex relationship between trees crops and soils This book provides a review of both economic and biophysical aspects of soil use and research in agroforestry with an emphasis on nutrient poor forest and savanna soils Key topics covered include the economics of soil fertility management cycling of water nutrients and organic matter soil structure and soil biological processes The book combines synthetic overviews of research results and a review of methods used in research From the foreword 2The book is written within a particular context soil fertility development under agroforestry At first this may seem very specific and thus limited in appeal and application But over the last decade or so agroforestry research has been one of the most influential in developing new insights into soil biology and fertility and thus provides a very suitable framework for review of progress Furthermore the influence of trees on soil is profound and of significance beyond agroforestry systems so the book is likely to be of interest in the wider spheres of agriculture forestry and ecological sciences 3 Mike Swift TSBF Nairobi Kenya
