Elizabeth Hannon, Tim Lewens

Evolution And Human Nature:

Purpose Samuel T. Wilkinson,2024-03-05 By using principles from a variety of scientific disciplines Yale Professor Samuel Wilkinson provides a framework for human evolution that reveals an overarching purpose to our existence Generations have been taught that evolution implies there is no overarching purpose to our existence that life has no fundamental meaning We are merely the accumulation of tens of thousands of intricate molecular accidents Some scientists take this logic one step further suggesting that evolution is intrinsically atheistic and goes against the concept of God But is this true By integrating emerging principles from a variety of scientific disciplines ranging from evolutionary biology to psychology Yale Professor Samuel Wilkinson provides a framework of evolution that implies not only that there is an overarching purpose to our existence but what this purpose is With respect to our evolution nature seems to have endowed us with competing dispositions what Wilkinson calls the dual potential of human nature We are pulled in different directions selfishness and altruism aggression and cooperation lust and love When we couple this with the observation that we possess a measure of free will all this strongly implies there is a universal purpose to our existence This purpose at least one of them is to choose between the good and evil impulses that nature has created within us Our life is a test This is a truth as old as history it seems that has been espoused by so many of the world s religions From a certain framework these aspects of human nature including how evolution shaped us are evidence for the existence of a God not against it Closely related to this is meaning What is the meaning of life Based on the scientific data it would seem that one such meaning is to develop deep and abiding relationships At least that is what most people report are the most meaningful aspects of their lives This is a function of our evolution It is how we were created *Evolution and Human Behavior* John Cartwright,2000 The book covers fundamental issues such as the origins and function of sexual reproduction mating behavior human mate choice patterns of violence in families altruistic behavior the evolution of brain size and the origins of language the modular mind and the relationship between genes and culture *The Evolution of Human Nature* Charles Judson Herrick,1961 **God Or Beast** Robert Claiborne,1974 The science writer refutes the ideas of Desmond Morris B F Skinner and others in presenting his theory about human behavior and man s evolutionary lineage **The Origin of Human Nature** Albert Low,2008 Offers an original way to integrate spiritual and scientific views of human evolution This work offers an alternative to the way we think about our origins random mutation mechanistic neo Darwinism Genesis God did it all personally and Intelligent Design God personally does what we can t otherwise account for *The Social Evolution of Human Nature* Harry Smit,2014-04-03 This book sheds new light on the problem of how the human mind evolved Harry Smit argues that current studies of this problem misguidedly try to solve it by using variants of the Cartesian conception of the mind and shows that combining the Aristotelian conception with Darwin s theory provides us with far more interesting answers He discusses the core problem of how we can understand language evolution in terms of inclusive fitness theory and investigates how

scientific and conceptual insights can be integrated into one explanatory framework which he contrasts with the alternative Cartesian derived framework He then explores the differences between these explanatory frameworks with reference to co operation and conflict at different levels of biological organization the evolution of communicative behaviour the human mind language and moral behaviour His book will interest advanced students and scholars in a range of subjects including philosophy biology and psychology Human Nature and the Evolution of Society Stephen Sanderson,2014-02-04 Drawing on evolutionary psychology sociobiology and human behavioral ecology this introduction to human behavior and the organization of social life explores the evolutionary dynamics underlying social life *Evolution and Human Nature* Richard B. Morris,Richard Morris,1984-09-01 *Evolutionary Theory and Human Nature* Ron Vannelli,2001-08-31 Evolutionary Theory and Human Nature is an original highly theoretical work dealing with the transition from genes to behavior using general principles of evolution especially those of sexual selection It seeks to develop a seamless transition from genes to human motivations as bio electric brain processes emotional cognitive processes to human nature propensities various constellations of emotional cognitive forces desires and fears to species typical patterns of behavior This work covers two often antagonistic fields biology and the social sciences It should be of strong interest to anthropologists sociologists sociobiologists psychobiologists and psychologists who are interested in the question of human nature influences on social behavior **The Evolution of Human Nature** C. Judson Herrick,2003-01 *The Mating Mind* Geoffrey Miller,2011-12-21 At once a pioneering study of evolution and an accessible and lively reading experience a book that offers the most convincing and radical explanation for how and why the human mind evolved Consciousness morality creativity language and art these are the traits that make us human Scientists have traditionally explained these qualities as merely a side effect of surplus brain size but Miller argues that they were sexual attractors not side effects He bases his argument on Darwin s theory of sexual selection which until now has played second fiddle to Darwin s theory of natural selection and draws on ideas and research from a wide range of fields including psychology economics history and pop culture Witty powerfully argued and continually thought provoking *The Mating Mind* is a landmark in our understanding of our own species

Adapting Minds David J. Buller,2006-02-17 Was human nature designed by natural selection in the Pleistocene epoch The dominant view in evolutionary psychology holds that it was that our psychological adaptations were designed tens of thousands of years ago to solve problems faced by our hunter gatherer ancestors In this provocative and lively book David Buller examines in detail the major claims of evolutionary psychology the paradigm popularized by Steven Pinker in *The Blank Slate* and by David Buss in *The Evolution of Desire* and rejects them all This does not mean that we cannot apply evolutionary theory to human psychology says Buller but that the conventional wisdom in evolutionary psychology is misguided Evolutionary psychology employs a kind of reverse engineering to explain the evolved design of the mind figuring out the adaptive problems our ancestors faced and then inferring the psychological adaptations that evolved to solve them In

the carefully argued central chapters of *Adapting Minds* Buller scrutinizes several of evolutionary psychology's most highly publicized discoveries including discriminative parental solicitude the idea that stepparents abuse their stepchildren at a higher rate than genetic parents abuse their biological children Drawing on a wide range of empirical research including his own large scale study of child abuse he shows that none is actually supported by the evidence Buller argues that our minds are not adapted to the Pleistocene but like the immune system are continually adapting over both evolutionary time and individual lifetimes We must move beyond the reigning orthodoxy of evolutionary psychology to reach an accurate understanding of how human psychology is influenced by evolution When we do Buller claims we will abandon not only the quest for human nature but the very idea of human nature itself

[Human Nature and Biocultural Evolution](#) Joseph Lopreato, 2024-12-02 First published in 1984 *Human Nature and Biocultural Evolution* aims to delineate a theory of human nature viewed as an interrelated set of genetically programmed behavioral predispositions and a theory of biocultural evolution The author's approach is based on the hypothesis that innate predispositions and cultural environmental factors cooperate to determine human behavior and socio cultural forms Professor Lopreato begins by tracing the development of evolutionary biology up to sociobiology It is his argument that the social and biological disciplines have for over a century been moving towards a synthesis and that *Homo sapiens* is neither just another animal nor so unique a being that culture has become divorced from its genetic underpinnings The argument is supported with evidence from evolutionary biology and social science with a critical discussion of basic issues of behavioral science and with an analysis of certain famous theories in social science e.g theories of suicide anomie capitalism which prove to be richer and more complete when viewed from a biocultural perspective The theory of human nature is arrived at through a rich analysis of ethnographic psychological and sociological arguments and data as well as facts and theories from comparative zoology In the process the author treats critically numerous theoretical problems associated with topics such as exploitation class consciousness structured inequality reciprocal behavior territorial aggression religious ritual socialization ethnicity and prejudice The author concludes with an examination of behavioral predispositions that are hypothesized to be at the base of cultural variation

[Conversations on Human Nature](#) Agustín Fuentes, Aku Visala, 2015-11-30 Recent empirical and philosophical research into the evolutionary history of *Homo sapiens* the origins of the mind brain and the development of human culture has sparked heated debates about what it means to be human and how knowledge about humans from the sciences and humanities should be understood *Conversations on Human Nature* featuring 20 interviews with leading scholars in biology psychology anthropology philosophy and theology brings these debates to life for teachers students and general readers The book outlines the basic scientific philosophical and theological issues involved in understanding human nature organizes material from the various disciplines under four broad headings 1 evolution brains and human nature 2 biocultural human nature 3 persons minds and human nature 4 religion theology and human nature concludes with Fuentes and Visala's discussion of what researchers into

human nature agree on what they disagree on and what we need to learn to resolve those differences

On Human Nature Jonathan H. Turner, 2020-11-24 In this book Jonathan H Turner combines sociology evolutionary biology cladistic analysis from biology and comparative neuroanatomy to examine human nature as inherited from common ancestors shared by humans and present day great apes Selection pressures altered this inherited legacy for the ancestors of humans termed hominins for being bipedal and forced greater organization than extant great apes when the hominins moved into open country terrestrial habitats The effects of these selection pressures increased hominin ancestors emotional capacities through greater social and group orientation This shift in turn enabled further selection for a larger brain articulated speech and culture along the human line Turner elaborates human nature as a series of overlapping complexes that are the outcome of the inherited legacy of great apes being fed through the transforming effects of a larger brain speech and culture These complexes he shows can be understood as the cognitive complex the psychological complex the emotions complex the interaction complex and the community complex

Human Nature and the Limits of Science John Dupré, 2001 Dupré warns that our understanding of human nature is being distorted by two faulty and harmful forms of pseudo scientific thinking He claims it is important to resist scientism an exaggerated conception of what science can be expected to do

On Human Nature Edward O. Wilson, 2012-10-01 No one who cares about the human future can afford to ignore Edward O Wilson's book *On Human Nature* begins a new phase in the most important intellectual controversy of this generation Is human behavior controlled by the species biological heritage Does this heritage limit human destiny

Why We Disagree about Human Nature Elizabeth Hannon, Tim Lewens, 2018 Is human nature something that the natural and social sciences aim to describe or is it a pernicious fiction What role if any does human nature play in directing and informing scientific work Leading figures from the life sciences philosophy psychology and anthropology present new essays exploring these questions

Evolution and Human Behaviour John Cartwright, 2007 This book offers a comprehensive overview of the principal theoretical ideas in evolutionary psychology and shows how pertinent Darwinism is to understanding modern social issues

Essential Building Blocks of Human Nature Ulrich J. Frey, Charlotte Störmer, Kai P. Willführ, 2010-11-08 To understand why we humans are as we are it is necessary to look at the essential building blocks that comprise our nature The foundations of this structure are our evolutionary origins as primates and our social roots Upon these rest features such as our emotions language and aesthetic preferences with our self perceptions self deceptions and thirst for knowledge right at the top The unifying force holding these blocks together is evolutionary theory Evolution provides a deeper understanding of human nature and in particular of the common roots of these different perspectives To build a reliable and coherent model of man leading authors from fields as diverse as primatology anthropology neurobiology and philosophy have joined forces to present essays each describing their own expert perspective Together they provide a convincing and complete picture of our own human nature
