Evolution Of Useful Things:

The Evolution of Useful Things Henry Petroski, 1994-02-01 How did the table fork acquire a fourth tine What advantage does the Phillips head screw have over its single grooved predecessor Why does the paper clip look the way it does What makes Scotch tape Scotch In this delightful book Henry Petroski takes a microscopic look at artifacts that most of us count on but rarely contemplate including such icons of the everyday as pins Post its and fast food clamshell containers At the same time he offers a convincing new theory of technological innovation as a response to the perceived failures of existing products suggesting that irritation and not necessity is the mother of invention *The Evolution of Useful Things* ,1992 Only Henry Petroski author of *The Pencil* could make one never pick up a paper clip again without being overcome with feelings of awe and reverence In his new book the author examines a host of techno trivia questions how the fork got its tines why Scotch tape is called that how the paper clip evolved how the Post it note came to be how the zipper was named why aluminum cans have hollow bottoms and provides us with answers that both astonish and challenge the In addition to an extended discussion of knives forks spoons and other common devices the author explains how the interplay of social and technical factors affects the development and use of such things as plastic bags fast food packaging push button telephones and other modern conveniences Throughout the book familiar objects serve to illustrate the general principles behind the evolution of all products of invention and engineering Petroski shows by way of these examples as well as a probing look at the patent process that the single most important driving force behind technological change is the failure of existing devices to live up to their promise As shortcomings become evident and articulated new and improved versions of artifacts come into being through long and involved processes variously known as research and development invention and engineering He further demonstrates how the evolving forms of technology generally are altered by our very use of them and how they in turn alter our social and cultural behavior *Evolution of Useful Things* Aleksandar S Vesic Professor of Civil Engineering and Professor of History Henry Petroski, Henry Petroski, 1994-02 Petroski tells fascinating stories about the arduous processes that resulted in paper clips Post its Phillips head screwdrivers Scotch tape and fast food clamshell containers Petroski an examines the simplest tools in our lives with an appraising eye Washington Post Book World 45 illus

Evolution of useful things Henry Petroski, 1994 *New York Magazine* ,1992-11-23 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country With award winning writing and photography covering everything from politics and food to theater and fashion the magazine s consistent mission has been to reflect back to its audience the energy and excitement of the city itself while celebrating New York as both a place and an idea **Cats' Paws and Catapults: Mechanical Worlds of Nature and People** Steven Vogel, 2000-01-17 Full of ideas and well explained principles that will bring new understanding of everyday things to both scientists and non scientists alike R McNeill Alexander Nature Nature and humans

build their devices with the same earthly materials and use them in the same air and water pulled by the same gravity Why then do their designs diverge so sharply Humans for instance love right angles while nature s angles are rarely right and usually rounded Our technology goes around on wheels and on rotating pulleys gears shafts and cams yet in nature only the tiny propellers of bacteria spin as true wheels Our hinges turn because hard parts slide around each other whereas nature s hinges a rabbit s ear for example more often swing by bending flexible materials In this marvelously surprising witty book Steven Vogel compares these two mechanical worlds introduces the reader to his field of biomechanics and explains how the nexus of physical law size and convenience of construction determine the designs of both people and nature This elegant comparison of human and biological technology will forever change the way you look at each Michael LaBarbera American Scientist

Human Success Hugh Desmond,Grant Ramsey,2023 What does it mean for our species or for any species to be successful Human Success Evolutionary Origins and Ethical Implications examines the concept of human success from a variety of disciplinary perspectives with contributions from leading paleobiologists anthropologists geologists philosophers of science and ethicists It tells the tale of how the human species grew in success linked metrics such as population size and geographical range and how it came to dominate ecological systems across the globe It explores how culture technology and creativity have contributed to human success However there is a darker side of human success as has become apparent in a world affected by climate change and the destruction of biodiversity This leads us to ask whether the human species can really be called successful and what our future success will look like in terms of our bodies minds morals and our place in the universe The essays in this book probe us to reflect on what has led to our apparent evolutionary success and most importantly what this success implies for the future of our species

The Oxford Handbook of History and Material Culture Ivan Gaskell,Sarah Anne Carter,2020-04-07 Most historians rely principally on written sources Yet there are other traces of the past available to historians the material things that people have chosen made and used This book examines how material culture can enhance historians understanding of the past both worldwide and across time The successful use of material culture in history depends on treating material things of many kinds not as illustrations but as

primary evidence Each kind of material thing and there are many requires the application of interpretive skills appropriate to it These skills overlap with those acquired by scholars in disciplines that may about history but are often relatively unfamiliar to historians including anthropology archaeology and art history Creative historians can adapt and apply the same skills they honed while studying more traditional text based documents even as they borrow methods from these fields They can think through familiar historical problems in new ways They can also deploy material culture to discover the pasts of constituencies who have left few or no traces in written records The authors of this volume contribute case studies arranged thematically in six sections that respectively address the relationship of history and material culture to cognition technology the symbolic social distinction and memory They range across time and space from Paleolithic to Punk **Change,**

Transformation and Development J. Stan Metcalfe, Uwe Cantner, 2012-12-06 For as long as one can remember the edifice of the neoclassical economic synthesis has been under attack Critiques have focused on the extreme unreality of the assumptions that underpin the Arrow Debreu theorems of welfare economics They have queried the excessive formalism of the edifice and the lack of practical significance of many of the results They have castigated the neoclassical synthesis for its internal incoherence lacking an independent theory of capital for example one of the favorite topics of the Cambridge school its lack of a dynamic element its non evolutionary character its lack of any conception of market process and so the list could be continued Blaug 1997 Through all this the neoclassical synthesis remains as strong as ever impervious it seems to these or any other attacks In this paper a different tack is taken The neoclassical edifice is left alone standing as a representation of what goes on in a certain kind of economy namely the economy where goods and services are produced and exchanged The paper then introduces another kind of economy namely an economy of productive entities called resources that are needed to produce the economy of goods and services *Malicious Objects, Anger Management, and the Question of Modern Literature*

Jörg Kreienbrock, 2012-10-10 Why do humans get angry with objects Why is it that a malfunctioning computer a broken tool or a fallen glass causes an outbreak of fury How is it possible to speak of an inanimate object's recalcitrance obstinacy or even malice When things assume a will of their own and seem to act out against human desires and wishes rather than disappear into automatic unconscious functionality the breakdown is experienced not as something neutral but affectively as rage or as outbursts of laughter Such emotions are always psychosocial public rhetorically performed and therefore irreducible to a private feeling By investigating the minutest details of life among dysfunctional household items through the discourses of philosophy and science as well as in literary works by Laurence Sterne Jean Paul Friedrich Theodor Vischer and Heimito von Doderer Kreienbrock reconsiders the modern bourgeois poetics that render things the way we know and suffer them **A History of Boston** Daniel Dain, 2024-09-19 Dain's A History of Boston helps the reader understand how land use and environment contribute to shaping a community Dain's Boston is the go to book R J Lyman Boston is today one of the world's greatest cities first in higher education hospitals life science companies and sports teams It was the home of the

Great Puritan Migration the American Revolution the Industrial Revolution the first civil rights movement the abolition movement and the women's rights movement But the city that gave us the first use of ether as anesthesia the telephone technicolor film and the mutual fund the city where Martin Luther King Jr and Coretta Scott founded their world changing partnership was also the hub of the anti immigration movement the divisive busing era and decades of self inflicted decay Boston has the most important history of any American city Yet its history has never been given a comprehensive treatment until now Join Dan Dain as he acts as your tour guide from the arrival of First Peoples up to the election of Boston's first woman and person of color as mayor Dain's masterful work explores the policies and practices that took Boston from its highest heights to its lowest lows and back again and examines the central role that density diversity and good urban design play in the success of cities like Boston

The Shape of Thought H. Clark Barrett, 2015-01-16 The Shape of Thought How Mental Adaptations Evolve presents a road map for an evolutionary psychology of the twenty first century It brings together theory from biology and cognitive science to show how the brain can be composed of specialized adaptations and yet also an organ of plasticity Although mental adaptations have typically been seen as monolithic hard wired components frozen in the evolutionary past The Shape of Thought presents a new view of mental adaptations as diverse and variable with distinct functions and evolutionary histories that shape how they develop what information they use and what they do with that information The book describes how advances in evolutionary developmental biology can be applied to the brain by focusing on the design of the developmental systems that build it Crucially developmental systems can be plastic designed by the process of natural selection to build adaptive phenotypes using the rich information available in our social and physical environments This approach bridges the long standing divide between nativist approaches to development based on innateness and empiricist approaches based on learning It shows how a view of humans as a flexible culturally dependent species is compatible with a complexly specialized brain and how the nature of our flexibility can be better understood by confronting the evolved design of the organ on which that flexibility depends

A Different Kind of Animal Robert Boyd, 2019-11-19 Human beings are a very different kind of animal We have evolved to become the most dominant species on Earth We have a larger geographical range and process more energy than any other creature alive This astonishing transformation is usually explained in terms of cognitive ability people are just smarter than all the rest But in this compelling book Robert Boyd argues that culture our ability to learn from each other has been the essential ingredient of our remarkable success A Different Kind of Animal demonstrates that while people are smart we are not nearly smart enough to have solved the vast array of problems that confronted our species as it spread across the globe Over the past two

million years culture has evolved to enable human populations to accumulate superb local adaptations that no individual could ever have invented on their own. It has also made possible the evolution of social norms that allow humans to make common cause with large groups of unrelated individuals, a kind of society not seen anywhere else in nature. This unique combination of cultural adaptation and large scale cooperation has transformed our species and assured our survival, making us the different kind of animal we are today. Based on the Tanner Lectures delivered at Princeton University, *A Different Kind of Animal* features challenging responses by biologist H. Allen Orr, philosopher Kim Sterelny, economist Paul Seabright, and evolutionary anthropologist Ruth Mace, as well as an introduction by Stephen Macedo.

The Oxford Handbook of the Archaeology of the Contemporary World Paul Graves-Brown, Rodney Harrison, Angela Piccini, 2013-10-17. It has been clear for many years that the ways in which archaeology is practised have been a direct product of a particular set of social, cultural, and historical circumstances. Archaeology is always carried out in the present. More recently, however, many have begun to consider how archaeological techniques might be used to reflect more directly on the contemporary world itself, how we might undertake archaeologies of as well as in the present. This Handbook is the first comprehensive survey of an exciting and rapidly expanding sub-field and provides an authoritative overview of the newly emerging focus on the archaeology of the present and recent past. In addition to detailed archaeological case studies, it includes essays by scholars working on the relationships of different disciplines to the archaeology of the contemporary world, including anthropology, psychology, philosophy, historical geography, science and technology studies, communications, and media, ethnoarchaeology, forensic archaeology, sociology, film, performance, and contemporary art. This volume seeks to explore the boundaries of an emerging sub-discipline, to develop a tool kit of concepts and methods which are applicable to this new field, and to suggest important future trajectories for research. It makes a significant intervention by drawing together scholars working on a broad range of themes, approaches, methods, and case studies from diverse contexts in different parts of the world which have not previously been considered collectively.
