*Theory of Society, Volume 1* Niklas Luhmann, 2012-10-10 This first volume of Niklas Luhmann's two part final work was initially published in German in 1997. The culmination of his thirty year theoretical project to reconceptualize sociology, it offers a comprehensive description of modern society on a scale not attempted since Talcott Parsons. Beginning with an account of the fluidity of meaning and the accordingly high improbability of successful communication, Luhmann analyzes a range of communicative media including language, writing, the printing press, and electronic media, as well as success media such as money, power, truth, and love, all of which structure this fluidity and make communication possible. An investigation into the ways in which social systems produce and reproduce themselves, the book asks what gives rise to functionally differentiated social systems, how they evolve, and how social movements, organizations, and patterns of interaction emerge. The advent of the computer and its networks, which trigger potentially far reaching processes of restructuring, receive particular attention. A concluding chapter on the semantics of modern society's self description bids farewell to the outdated theoretical approaches of old Europe, that is to ontological, holistic, ethical, and critical interpretations of society, and argues that concepts such as the nation, the subject, and postmodernity are vastly overrated. In their stead, society, long considered a suspicious term by sociologists, is open to all kinds of reification, is defined in purely operational terms. It is the always uncertain answer to the question of what comes next in all areas of communication. [Springer Handbook of Science and Technology Indicators](#) Wolfgang Glänzel, Henk F. Moed, Ulrich Schmoch, Mike Thelwall, 2019-10-30 This handbook presents the state of the art of quantitative methods and models to understand and assess the science and technology system. Focusing on various aspects of the development and application of indicators derived from data on scholarly publications, patents, and electronic communications, the individual chapters, written by leading experts, discuss theoretical and methodological issues, illustrate applications, highlight their policy context and relevance, and point to future research directions. A substantial portion of the book is dedicated to detailed descriptions and analyses of data sources, presenting both traditional and advanced approaches. It addresses the main bibliographic metrics and indexes such as the journal impact factor and the h index, as well as altmetric and webometric indicators, and science mapping techniques on different levels of aggregation and in the context of their value for the assessment of research performance, as well as their impact on research policy and society. It also presents and critically discusses various national research evaluation systems. Complementing the sections reflecting on the science system, the technology section includes multiple chapters that explain different aspects of patent statistics, patent classification, and database search methods to retrieve patent related information. In addition, it examines the relevance of trademarks and standards as additional technological indicators. The Springer Handbook of Science and Technology Indicators is an invaluable resource for practitioners, scientists, and policy makers wanting a systematic and thorough analysis of the potential and limitations of the various approaches to assess research and research performance.

*Predicting Technology: A Practical Guide For Technology Managers and Marketing Professionals To Identify Future Market Opportunities* Thomas E. Vass ,2014-02-28 Part of the theory about predicting the direction of technology in this book builds upon work done by Clayton Christensen a professor of business at Harvard University Christensen has written many books about how multinational corporations are affected by a topic called disruptive technology The Economics of Complex Spatial Systems A. Nijkamp,1998-05-05 This book argues that complexity theory offers new departures for spatial economic modelling It offers a broad overview of recent advances in non linear dynamics catastrophe theory chaos theory evolutionary theory and so forth and illustrates the relevance of this new paradigm on the basis of several illustrations in the area of space economy The empirical limitations inherent in the use of non linear dynamic systems approaches are also addressed Next the application potential of biocomputing in particular neural networks and evolutionary algorithms is stressed while various empirical model results are presented The book concludes with an agenda for further research

*The Evolutionary Dynamics of Discursive Knowledge* Loet Leydesdorff,2021-01-01 This open access book addresses three themes which have been central to Leydesdorff s research 1 the dynamics of science technology and innovation 2 the scientometric operationalization of these concept and 3 the elaboration in terms of a Triple Helix of university industry government relations In this study I discuss the relations among these themes Using Luhmann s social systems theory for modelling meaning processing and Shannon s theory for information processing I show that synergy can add new options to an innovation system as redundancy The capacity to develop new options is more important for innovation than past performance Entertaining a model of possible future states makes a knowledge based system increasingly anticipatory The trade off between the incursion of future states on the historical developments can be measured using the Triple Helix synergy indicator This is shown for example for the Italian national and regional systems of innovation **The Certainty of**
